METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 22nd May, 1909:—

"Winter and summer met in this week—the first three days being cold as in midwinter, the last four days being in all respects summerlike. Early on Sunday morning the screened thermometer touched 27° at Wick, 30° at Nairn, 32° at Stornoway, and 33° at Donaghadee, Aberdeen, and North Shields. In Dublin the minimum was 37° in the screen, while 33° was recorded on the ground. The day was fine and cool with light easterly breezes. A solar halo was seen in the afternoon. Monday morning found a shallow depression over the Netherlands and a still shallower disturbance off the N.W. of Ireland. Massive cumuli were formed after midday over Dublin and at 2.30 p.m. a downpour of rain, hail and ice fragments took place in certain districts of the City and suburbs—the rainfall at Fitzwilliam Square was 35 inch, whereas only 16 inch was measured at Leeson Park, not half a mile distant towards S.S.E. By Tuesday morning the Netherlands depression had reached the South of Scandinavia and grown deeper. The day was very fine in Ireland, showery in Great Britain, and still generally cold. An anticyclone now formed over the N. of France, the S.E. of England, and the Low Countries. This system brought a rapid rise of temperature with its southerly winds, so that on Thursday the thermometer rose to 76° at several Welsh stations and to 75° at Liverpool, Manchester and Nottingham. Next day 73° was reached in Dublin and 80° in London and over the greater part of Central England. At this time shallow depressions moved northwards across the Atlantic outside the western shores of Ireland, along which rain fell heavily (Valentia getting 84 inch and Blacksod Point 47 inch). In Dub in a sheet of cirrus cloud swayed backwards and forwards across the sky, but no rain fell till Saturday evening. The planet Mercury was seen to great advantage in the N.W. heavens on several evenings. In this City the mean height of the barometer was 30.051 inches, the range being from 29.873 inches at 9 a.m. of Monday (wind, W.) to 30.214 inches at 9 a.m. of Wednesday (wind, E.). The corrected mean temperature was 53.0°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 53.1°. The screened thermometers fell to 36.7° on Sunday and rose to 72.7° on Friday. The wind was light and variable—chiefly south-easterly. Rain fell on 2 days to the amount of 4.09 inch, 3.77 being recorded on Monday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·884 inches. The highest reading (30·043) was on Wednesday at 9 a.m., wind S.W., and the lowest (29·713) on Monday at 9 a.m., air calm.

The mean temperature for the week was 50·2°, being 1·6° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Friday, on which day the thermometer registered 72·1°, and was lowest on Monday, the mercury having fallen to 27·9°. The mean of the Dry Bulb for the week was 52·2° and of the Wet Bulb 47·9°. The mean humidity of the air was 74, complete saturation being represented by 1·0. The rainfall during the week measured 0·036 inch.

At Greenwich the mean temperature for the week was 54·9°, the maximum 84·0°, and the minimum 33·1°; at Glasgow the maximum was 72·0°, the minimum 29·0°, and the mean 52·7°; and at Edinburgh the maximum was 70·4°, the minimum 31·9°, and the mean 49·2°. The rainfall at Greenwich measured 0·13 in.; at Glasgow, 0·37 in.; and at Edinburgh, 0·29 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 29TH MAY, 1909.

[No. 21.]

*General Register Office, Charlemont House,
Dublin, 1st June, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 20·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 14·0 | 18·7 | 32·7 | 4·7 | 17·5 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in sixteen of the districts to 4·4 in Lurgan, the 6 deaths from all causes for that district including one from scarlet fever. Of the 139 deaths from all causes for Belfast 6 are from whooping-cough, one from *pyrexia* (origin uncertain), and 3 from diarrheal diseases. Among the 29 deaths from all causes for Cork 2 are from whooping-cough. One of the 20 deaths from all causes for Limerick is from diphtheria, and one death from diphtheria is also included in the 10 deaths from all causes for Dundalk.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 220—115 boys and 105 girls—and the deaths to 175—91 males and 84 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 22·9 in every 1,000 of the

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

population ; omitting the deaths (numbering 9) of persons admitted into public institutions from localities outside the Area, the rate was 21·7 per 1,000. During the twenty-one weeks ending with Saturday last, the death-rate averaged 25·8, and was 1·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

Of the 175 deaths from all causes, there were 6 from whooping-cough, 4 from diphtheria, 2 from enteric fever, one from *diarrhoea*, 2 from influenza, and one from cerebro-spinal fever. In the three preceding weeks, deaths from whooping-cough were 4, 5, and 4 ; deaths from diphtheria were 0, 0, and one ; deaths from enteric fever were 0, 2, and 4 ; deaths from diarrheal diseases were 2, one, and 0 ; deaths from influenza were 3, 4, and 5 ; and deaths from cerebro-spinal fever were 0, 0, and 0, respectively.

There were 7 deaths from broncho-pneumonia, and 10 from *pneumonia* (not defined).

To all forms of tuberculous disease 31 deaths were ascribed, including 18 deaths from tuberculous phthisis (*phthisis*), 5 from tuberculous meningitis, one from tuberculous peritonitis, and 7 from other forms of the disease. In the three preceding weeks deaths from all forms of tuberculous disease numbered 29, 21, and 28, respectively.

Seven deaths were caused by carcinoma, and 4 by cancer, malignant disease (undefined).

The deaths of 6 infants, prematurely born, were registered.

Of 8 deaths from diseases of the brain and nervous system 2 (those of infants under one year of age) were attributed to *convulsions*.

Diseases of the heart and blood vessels caused 30 deaths, and bronchitis caused 19 deaths.

There were 5 deaths attributed to accident or neglect, and one death (that of an infant under one year of age) was a case of homicide.

In one instance the cause of death was "uncertified," there having been no medical attendant during the last illness ; this case was that of an infant under one year of age.

Sixty of the persons whose deaths were registered during the week were under 5 years of age (32 being infants under one year, of whom 14 were under one month old) and 50 were aged 60 years and upwards, including 25 persons aged 70 and upwards, of whom 5 were octogenarians.

Eighty-six of the deaths registered during the week occurred in hospitals and other public institutions ; of this number 19 took place in the North Dublin Union Workhouse and 18 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 21·7 per 1,000 ; the rate in the City was 23·1 (North City Districts, 19·2 ; South, 27·2) and in the Suburbs, 17·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·7 per 1,000 inhabitants, the rate for the City being 1·5 (1·7 in the North City Districts, and 1·4 in the South), and for the Suburbs, 2·3 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (8) are equal to an annual rate of 14·1 per 1,000, and include one death from broncho-pneumonia and 2 deaths from *pneumonia* (not defined).

No. 1 North City District, West (Summer-hill).—The deaths (15) are equal to an annual rate of 19·8 per 1,000. Among them are one death each from whooping-cough, diphtheria, and enteric fever, two deaths from tuberculous phthisis, and 3 from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (12) are equivalent to an annual rate of 20·6 per 1,000. Enteric fever caused one death, there were 2 from *pneumonia* (not defined), one death from *phthisis*, and one from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (13) represent an annual rate of 20·4 per 1,000. The 13 deaths include one from whooping-cough, one from broncho-pneumonia, 3 from *pneumonia* (not defined), 2 from tuberculous disease, and one accidental death.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are :—Coolock and Drumcondra, No. 1, part of, 13·6 per 1,000 inhabitants ; Clontarf and Howth, No. 1, part of, 0·0 ; and Finglas and Glasnevin, part of, 48·0. Of the 3 deaths from all causes for Coolock and Drumcondra, part of, one death was from *phthisis* and one was homicidal ; and the 7 deaths from all causes for Finglas and Glasnevin, part of, include one from *pneumonia* (not defined), one from tuberculous disease, and 2 from bronchitis.

No. 1 South City District (South Earl-street).—The deaths (22) represent an annual rate of 28·0 per 1,000, and include one death from whooping-cough, one from broncho-pneumonia, 6 from tuberculous disease, 4 from bronchitis, and one accidental death.

No. 2 South City District (Castle-street).—The deaths (15) are equal to an annual rate of 36·4 per 1,000. Among them are one death each from broncho-pneumonia and *pneumonia* (not defined), 5 from tuberculous disease, and 2 from bronchitis.

No. 3 South City District (Peter-street).—The deaths (21) are equal to an annual rate of 25·6 per 1,000. There were 2 deaths from whooping-cough, one from cerebro-spinal fever, 4 from tuberculous disease, and 4 from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (17) are equivalent to an annual rate of 25·0 per 1,000. Whooping-cough and influenza each caused one death, there were 2 deaths from broncho-pneumonia, one from *pneumonia* (not defined), and 3 deaths from bronchitis.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. *Phthisis* caused 2 deaths.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are :—Rathmines and Rathgar, 21·4 ; Pembroke, 14·6 ; Blackrock, 11·9 ; and Kingstown, 14·8. The deaths from the principal epidemic diseases tabulated for these districts include 2 from diphtheria for Rathmines and Rathgar and one from diphtheria for Pembroke. Among the 15 deaths from all causes for Rathmines and Rathgar are one from influenza and 7 from diseases of the heart and blood vessels ; the 8 deaths from all causes for Pembroke include one from tuberculous *phthisis* and one accidental death ; of the 2 deaths recorded for Blackrock one was from tuberculous *phthisis* ; and the 5 deaths from all causes for Kingstown include one from tuberculous *phthisis* and one accidental death.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 29th May, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including 2 cases of cerebro-spinal fever reported during week ended 15th May, and one case during week ended 29th May.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 29th May, 1909.

From this it appears that:—

Eight cases of measles were admitted into hospital during the week, 12 were discharged, and 26 cases remained under treatment at its close.

Ten cases of scarlet fever were admitted to hospital, 10 were discharged, there was one death, and 77* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Eleven cases of diphtheria were admitted to hospital, 5 were discharged, and 39 patients remained under treatment at the close of the week.

Five cases of enteric fever were admitted to hospital during the week, 4 were discharged, there were 2 deaths, and 39 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 19 cases of pneumonia were admitted to hospital, 7 were discharged, there were 3 deaths, and 48 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 13·4) was equal to an average annual death-rate of 13·9 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 16·7 per 1,000, the rate for Glasgow being 17·2 and for Edinburgh 16·2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 29th May. From this Report it appears that of a total of 52 cases notified, 26 were scarlet fever, 11 phthisis, 11 diphtheria, 2 erysipelas, one enteric fever, and one puerperal fever. Among the 325 cases of infectious diseases in hospital at the close of the week were 127 cases of scarlet fever, 60 of whooping-cough, 48 of phthisis, 44 of diphtheria, 21 of measles, 7 of erysipelas, 5 of chicken-pox, 2 of cerebro-spinal fever, 2 of puerperal fever, and one of enteric fever.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 29th May, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 29th May, 1909:—

"Opening with fine, summerlike weather, this week proved to be unsettled, rain falling abundantly in nearly all parts of the Kingdom after Monday, on which day the May drought of 1909 came to an end. The change, so beneficial to the agriculturist, was brought about by the sudden extension of a cyclonic disturbance of a rather complex character from the Atlantic over the whole of the United Kingdom and France on Monday night. By Tuesday morning the barometer had fallen more than three-quarters of an inch in 24 hours all along the western seaboard of Ireland, and owing to the formation of a secondary V-shaped depression over France the reduction of pressure equalled or exceeded six-tenths of an inch throughout the South of England. Rain had already set in at the Irish stations in the course of Monday, but that day was fair and warm in England, the thermometer rising to 72° in London and to 73° at Bath and Oxford. The break-up of the fine weather was signalled by thunderstorms in the S.W. of England in the course of Monday night and subsequently over the central and northern parts of that country. On Wednesday morning a large area of low pressure (29·4 inches and less) embraced Ireland and Scotland. By 6 p.m. the reduction of pressure had reached its climax, the barometer falling below 29·3 inches all over Ulster and Leinster. The disturbance afterwards moved in a north-westerly direction towards Iceland, but on Friday the weather was again disturbed by the arrival from the Atlantic of a fresh depression which ultimately crossed England eastwards, leaving clearing skies and W. or N.W. winds in its wake on Saturday. The week closed with finer and warmer weather and with good omens for Whitsuntide. In Dublin the mean height of the barometer was 29·762 inches, pressure ranging between 30·263 inches at 9 a.m. of Monday (wind, S.E.) and 29·224 inches at 9 a.m. of Wednesday (wind, W.). The corrected mean temperature was 55·5°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 54·6°. On Sunday the screened thermometers rose to 65·6°, on Friday they fell to 48·4°. The dominant winds were S.W. and W. Rain fell on 5 rain-days to the amount of ·692 inch, the maximum in 24 hours being ·314 inch on Wednesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.599 inches. The highest reading (30.103) was on Sunday at 9 p.m., wind W., and the lowest (29.058) on Wednesday at 9 a.m., wind S.W.

The mean temperature for the week was 53.8°, being 3.8° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 64.6°, and was lowest on Monday, the mercury having fallen to 39.4°. The mean of the Dry Bulb for the week was 52.8° and of the Wet Bulb 50.0°. The mean humidity of the air was .82, complete saturation being represented by 1.0. The rainfall during the week measured 0.743 inch.

At Greenwich the mean temperature for the week was 57.5°, the maximum 81.2°, and the minimum 46.1°; at Glasgow the maximum was 62.2°, the minimum 45.0°, and the mean 55.3°; and at Edinburgh the maximum was 63.6°, the minimum 43.3°, and the mean 54.0°. The rainfall at Greenwich measured 0.95 in.; at Glasgow, 0.99 in.; and at Edinburgh, 0.87 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 5TH JUNE, 1909.

[No. 22.]

*General Register Office, Charlemont House,
Dublin, 7th June, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 16·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 187 | 327 | 47 | 47 | 152 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in seventeen of the districts to 5·3 in Tralee, the only death for that district being one from enteric fever. Among the 118 deaths from all causes for Belfast are 3 from whooping-cough, one from diphtheria, and 2 from diarrheal diseases. Included in the 27 deaths from all causes for Cork are one from whooping-cough and one from diarrhæa, and among the 3 deaths from all causes for Dundalk is one from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 200—104 boys and 96 girls—and the deaths to 147—69 males and 78 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 19·2 in every 1,000 of the population; omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, the rate was 18·2 per 1,000. During the twenty-two weeks ending with Saturday last, the death-rate averaged 25·5, and was 1·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

The total deaths (147) from all causes include 2 from measles, one death from scarlet fever, 4 deaths from whooping-cough, 3 deaths from enteric fever, one death from epidemic enteritis, and 3 deaths from influenza. In each of the three preceding weeks, deaths from measles were 3, 0, and 0; deaths from scarlet fever were 0, 0, and 0; deaths from whooping-cough were 5, 4, and 6; deaths from enteric fever were 2, 4, and 2; deaths from diarrhoeal diseases were one, 0, and one; and deaths from influenza were 4, 5, and 2.

Of 16 deaths from pneumonia (all forms), one was caused by lobar pneumonia, 7 were from broncho-pneumonia, and 8 were from pneumonia (not defined).

The deaths from tuberculous disease (all forms of) amounted to 28, and include 18 deaths from tuberculous phthisis (*phthisis*), one death from each of tuberculous meningitis, tuberculous peritonitis, and *tabes mesenterica*, and 7 deaths from other forms of the disease. In each of the three preceding weeks deaths from tuberculous disease numbered 21, 28, and 31.

There were 4 deaths from carcinoma, and 4 deaths from cancer (undefined).

Among deaths from diseases of the brain and nervous system there were 4 deaths from *convulsions*. Of these 3 were of infants under one year of age and one was aged 2 years.

Diseases of the heart and blood vessels accounted for 21 deaths, and there were 12 deaths from bronchitis.

There were 2 accidental deaths, and one death of an infant found drowned was attributed to homicide.

In three instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the death of one child under 5 years of age, and the death of one person aged 62 years.

Thirty-eight of the persons whose deaths were registered during the week were under 5 years of age (18 being infants under one year, of whom 5 were under one month old) and 44 were aged 60 years and upwards, including 27 persons aged 70 and upwards, of whom 9 were octogenarians, and one (a female) was stated to have been aged 92 years.

Sixty of the deaths registered during the week occurred in hospitals and other public institutions; of this number 13 took place in the North Dublin Union Workhouse and 16 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 18·2 per 1,000; the rate in the City was 18·7 (North City Districts, 18·3; South, 19·1) and in the Suburbs, 16·5.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·4 per 1,000 inhabitants, the rate for the City being 1·5 (1·0 in the North City Districts, and 2·1 in the South), and for the Suburbs, 1·1 per 1,000.

No. 1 North City District (East (Clarence-street, North).—The deaths (11) are equal to an annual rate of 19·4 per 1,000, and include 2 deaths from measles, 2 deaths from pneumonia (not defined), one death from phthisis, and 2 deaths from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (18) are equal to an annual rate of 23·7 per 1,000. Among the deaths there was one from enteric fever, one from each of broncho-pneumonia and pneumonia (not defined), there were 3 from tuberculous disease, 2 from bronchitis, and one accidental death.

No. 2 North City District (Lisburn-street).—The deaths (14) are equivalent to an annual rate of 24·0 per 1,000. Of the deaths 2 were from pneumonia (not defined), 5 were from tuberculous disease, and there was one death from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (7) represent an annual rate of 11·0 per 1,000. Broncho-pneumonia caused 2 deaths, there was one death from pneumonia (not defined), and there were 2 deaths from tuberculous disease.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 13·6 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 13·7. Of the 3 deaths from all causes for Coolock and Drumcondra, part of, one was from influenza; and one of the 2 deaths recorded for Finglas and Glasnevin, part of, was from tuberculous phthisis.

No. 1 South City District (South Earl-street).—The deaths (13) represent an annual rate of 16·5 per 1,000. The deaths include, one death from enteric fever, one from lobar-pneumonia, 2 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (11) are equal to an annual rate of 26·7 per 1,000. Among the deaths there was one from pneumonia (not defined), there were 4 from tuberculous disease, and one death from bronchitis.

No. 3 South City District (Peter-street).—The deaths (17) are equal to an annual rate of 20·7 per 1,000. There was one death from each of whooping-cough, influenza, broncho-pneumonia, and tuberculous phthisis, and there were 3 deaths from diseases of the respiratory system.

No. 4 South City District (Grand Canal-street).—The deaths (11) are equivalent to an annual rate of 16·2 per 1,000. Whooping-cough, epidemic diarrhoea, broncho-pneumonia, and tuberculous phthisis each caused one death, and there were 2 deaths from diseases of the respiratory system.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. Of the 3 deaths, 2 were caused by whooping-cough and one by tuberculous disease.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 17·1; Pembroke, 16·5; Blackrock, 35·7; and Kingstown, 5·9. The deaths from the principal epidemic diseases tabulated for these districts include one from enteric fever for Rathmines and Rathgar, and one from scarlet fever for Pembroke. Among the 12 deaths from all causes for Rathmines and Rathgar are 2 from phthisis, and one accidental death; the 9 deaths from all causes for Pembroke include one death each from broncho-pneumonia and pneumonia (not defined), and 2 deaths from tuberculous phthisis; of the 6 deaths from all causes for Blackrock there was one death each from phthisis and bronchitis; and of the 2 deaths recorded for Kingstown one was from broncho-pneumonia and one death of an infant was attributed to homicidal drowning.

* See Columns 10-18 of Table II.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 5th June, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including 2 cases of cerebro-spinal fever reported during week ended 15th May, and one case during week ended 29th May.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 5th June, 1909.

From this it appears that:—

Five cases of measles were admitted into hospital during the week, 5 were discharged, and 26 cases remained under treatment at its close.

Twelve cases of scarlet fever were admitted to hospital, 16 were discharged, and 73* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Eight cases of diphtheria were admitted to hospital, 3 were discharged, and 44 patients remained under treatment at the close of the week.

Ten cases of enteric fever were admitted to hospital during the week, 5 were discharged, there were 2 deaths, and 42 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 11 cases of pneumonia were admitted to hospital, 11 were discharged, and 48 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11·6) was equal to an average annual death-rate of 12·3 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 16·3 per 1,000, the rate for Glasgow being 15·4 and for Edinburgh 17·5.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 5th June. From this Report it appears that of a total of 46 cases notified, 20 were scarlet fever, 13 diphtheria, 9 phthisis, and 4 erysipelas. Among the 556 cases of infectious diseases in hospital at the close of the week were 129 cases of scarlet fever, 58 of whooping-cough, 49 of diphtheria, 49 of measles, 48 of phthisis, 6 of erysipelas, 3 of chicken-pox, 2 of cerebro-spinal fever, one of puerperal fever, and one of enteric fever.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 5th June, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 5th June, 1909:—

"Ireland was privileged in enjoying much finer weather than England during the greater part of this week. Sunday was fine and warm in the latter country and on the east coast of Ireland, but a shallow V-shaped depression was already drifting in from the Atlantic and this system carried with it clouds and rain to Ireland, Wales and Scotland. On Monday evening a northerly wind spread over Ireland in the rear of the 'V' and in advance of an anticyclonic system which lay upon the eastern Atlantic throughout the remainder of the week. By Tuesday morning a small 'low' pressure system had formed over Brittany, and, as it remained almost stationary until it became merged in a larger system which arrived from the Peninsula on Wednesday evening, its cool northerly winds, clouds, and rain brought inclement conditions to the shores of the English Channel and to the south of England generally. In those districts thunder and lightning occurred. On Friday morning the depression had become very energetic in the English Channel and Straits of Dover. Strong and squally N.E. winds blew in those regions, and the weather was wet and raw continuously. At this time Ireland lay within the anticyclonic sphere and the weather was fine—on Thursday it was brilliant, Birr Castle recording 12 hours of bright sunshine. In the afternoon clouds overspread the sky, seriously interfering with the observation of a total eclipse of the moon during the following night. Friday held up but was cloudy, and on Saturday afternoon rain fell copiously in Dublin and its vicinity, the wind veering to E. with an unseasonably low temperature. In this City the mean atmospheric pressure was 30.020 inches, the barometer ranging between 30.230 inches at 9 p.m. of Wednesday and 9 a.m. of Thursday (wind, N.N.E. and N.E.) and 29.824 inches at 4 p.m. of Saturday (wind, E.). The corrected mean temperature was 55.0°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 54.6°. On Sunday the screened thermometers rose to 66.5°, on Thursday they fell to 44.3°. N.E. was the prevailing wind. Rain fell on 3 days to the amount of .361 inch, Monday's measurement being .176 inch."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.858 inches. The highest reading (30.079) was on Wednesday at 9 p.m., air calm, and the lowest (29.680) on Saturday at 9 p.m., wind E.

The mean temperature for the week was 53.2°, being 0.7° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 65.8°, and was lowest on Thursday, the mercury having fallen to 35.9°. The mean of the Dry Bulb for the week was 53.0° and of the Wet Bulb 51.0°. The mean humidity of the air was .87, complete saturation being represented by 1.0. The rainfall during the week measured 0.485 inch.

At Greenwich the mean temperature for the week was 54.2°, the maximum 76.0°, and the minimum 45.2°; at Glasgow the maximum was 65.0°, the minimum 43.0°, and the mean 53.6°; and at Edinburgh the maximum was 60.4°, the minimum 41.8°, and the mean 51.7°. The rainfall at Greenwich measured 0.94 in.; at Glasgow, 0.88 in.; and at Edinburgh, 0.37 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

WEEK ENDING SATURDAY, 12TH JUNE, 1909.

[No. 23.]

*General Register Office, Charlemont House,
Dublin, 14th June, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 16·7 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Dundalk, . . . | 40 | 399 | 120 | 40 | 150 | Sligo, . . . | 48 | 336 | 144 | 48 | 144 |
| Galway, . . . | 117 | 155 | 155 | 155 | 146 | Tralee, . . . | 211 | 211 | 53 | 106 | 145 |
| Kilkenny, . . . | 197 | 147 | 147 | 147 | 160 | Waterford, . . . | 273 | 117 | 136 | 136 | 166 |
| | | | | | | Wexford, . . . | 327 | 47 | 47 | 280 | 175 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in fourteen of the districts to 4·7 in Wexford, the 6 deaths from all causes for that district including one from diarrhoea. Among the 119 deaths from all causes for Belfast are 6 from whooping-cough, 2 from diphtheria, 2 from diarrhoeal diseases, and one from *cerebro-spinal meningitis*. Of the 31 deaths from all causes for Cork 4 are from whooping-cough. Included in the 11 deaths from all causes for Londonderry is one from enteric fever, and the only death recorded for Dundalk is one from measles.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 236—115 boys and 121 girls—and the deaths to 151—73 males and 78 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 19·8 in every 1,000 of the population ; omitting the deaths (numbering 8) of persons admitted into public institutions from localities outside the Area, the rate was 18·7 per 1,000. During the twenty-three weeks ending with Saturday last, the death-rate averaged 25·2, and was 1·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

The total number of deaths from all causes includes one death from each of the following causes:—Measles, scarlet fever, typhus, *pyrexia* (origin uncertain), enteric fever, and *diarrhæa*, 4 deaths from whooping-cough, and 6 deaths from influenza. In the three preceding weeks, deaths from measles were 0, 0, and 2; deaths from scarlet fever were 0, 0, and 1; deaths from typhus were 0, 0, and 0; deaths from whooping-cough were 4, 6, and 4; deaths from enteric fever were 4, 2, and 3; deaths from diarrhoeal diseases were 0, one, and one; and deaths from influenza were 5, 2, and 3, respectively.

The deaths from pneumonia (all forms) include one death from lobar pneumonia, 2 deaths from broncho-pneumonia, and 6 deaths from *pneumonia* (not defined).

There were 31 deaths from all forms of tuberculous disease. The total includes 24 deaths from tuberculous phthisis (*phthisis*), 5 deaths from tuberculous meningitis, one death from *tabes mesenterica*, and one death from general tuberculosis. In each of the three preceding weeks deaths from all forms of tuberculous disease were 28, 31, and 28.

Of 5 deaths from malignant disease, 2 were attributed to carcinoma, and 3 to cancer (undefined).

The deaths of 8 infants, prematurely born, were registered.

Of 11 deaths from diseases of the brain and nervous system 2 were those of infants under one year of age from *convulsions*.

Diseases of the heart or blood vessels accounted for 20 deaths, and there were 9 deaths from bronchitis.

Of 2 deaths attributed to accidental circumstances, one—that of a child aged 4 years and 9 months, was from scalds.

In four instances the cause of death was “uncertified,” there having been no medical attendant during the last illness; these deaths were all of infants under one year of age.

Forty of the persons whose deaths were registered during the week were under 5 years of age (25 being infants under one year, of whom 16 were under one month old) and 40 were aged 60 years and upwards, including 20 persons aged 70 and upwards, of whom 6 were octogenarians, and three (one male and 2 females) were stated to have been aged 90, 90, and 91 years, respectively.

Seventy-three of the deaths registered during the week occurred in hospitals and other public institutions; of this number 17 took place in the North Dublin Union Workhouse, 10 in the South Dublin Union Workhouse, and one in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 18·7 per 1,000; the rate in the City was 19·2 (North City Districts, 20·9; South, 17·4) and in the Suburbs, 17·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·2 per 1,000 inhabitants, the rate for the City being 0·8 (0·7 in the North City Districts, and 1·0 in the South), and for the Suburbs, 2·3 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (11) are equal to an annual rate of 2·47 per 1,000, and include one death from *dysentery*, 2 deaths from influenza, one death from lobar-pneumonia, one from *pneumonia* (not defined), and 2 deaths from tuberculous disease.

No. 1 North City District, West (Summer-hill).—The deaths (18) are equal to an annual rate of 2·37 per 1,000. Influenza and *pneumonia* (not defined) each caused one death, there were 3 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (9) are equivalent to an annual rate of 1·54 per 1,000. Measles and *pneumonia* (not defined) each caused one death, there were 2 deaths from tuberculous disease, and one death from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (18) represent an annual rate of 2·33 per 1,000. Tuberculous phthisis (*phthisis*) caused 4 deaths, and there was one death from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 9·1; and Finglas and Glasnevin, part of, 6·9. One of the 2 deaths recorded for Coolock and Drumcondra, part of, was from influenza; and the only death recorded for Finglas and Glasnevin, part of, was one from tuberculous phthisis.

No. 1 South City District (South Earl-street).—The deaths (15) represent an annual rate of 19·1 per 1,000. The deaths include one from whooping-cough, 2 from *pneumonia* (not defined), 3 from tuberculous phthisis (*phthisis*), and one death from bronchitis.

No. 2 South City District (Castle-street).—The deaths (3) are equal to an annual rate of 7·3 per 1,000. The 3 deaths registered were from tuberculous disease, namely, 2 deaths from tuberculous phthisis (*phthisis*), and one death from tuberculous meningitis.

No. 3 South City District (Peter-street).—The deaths (19) are equal to an annual rate of 23·2 per 1,000. Whooping-cough, broncho-pneumonia, and *pneumonia* (not defined) each caused one death, there were 3 deaths from tuberculous disease, 2 deaths from diseases of the respiratory system, and 2 accidental deaths.

No. 4 South City District (Grand Canal-street).—The deaths (10) are equivalent to an annual rate of 14·7 per 1,000. There was one death from typhus, there was one death from *phthisis*, and bronchitis caused one death.

New Kilmainham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. Of 3 deaths registered, one was caused by *phthisis*.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 21·4; Pembroke, 11·0; Blackrock, 11·9; and Kingstown, 20·7. The deaths from the principal epidemic diseases tabulated for these districts include one from scarlet fever and one from *pyrexia* (origin uncertain) for Rathmines and Rathgar, one from whooping-cough for Pembroke, and one from whooping-cough for Kingstown. Among the 15 deaths from all causes for Rathmines and Rathgar are one death from influenza, one from lobar-pneumonia, 4 deaths from tuberculous phthisis (*phthisis*), and one from bronchitis; and the 6 deaths from all causes for Pembroke include one from influenza.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 12th June, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of cerebro-spinal fever reported during week ended 29th May.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 12th June, 1909.

From this it appears that:—

Twelve cases of measles were admitted into hospital during the week, 6 were discharged, there was one death, and 31 cases remained under treatment at its close.

Sixteen cases of scarlet fever were admitted to hospital, 12 were discharged, there was one death, and 76* cases remained under treatment at the close of the week.

The death from typhus was that of a person admitted to hospital during the week.

Seven cases of diphtheria were admitted to hospital, 13 were discharged, and 38 patients remained under treatment at the close of the week.

Five cases of enteric fever were admitted to hospital during the week, 6 were discharged, there was one death, and 40 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 12 cases of pneumonia were admitted to hospital, 20 were discharged, there was one death, and 39 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·2) was equal to an average annual death-rate of 12·6 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 14·5 per 1,000, the rate for Glasgow being 15·9 and for Edinburgh 12·6.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 12th June. From this Report it appears that of a total of 61 cases notified, 28 were scarlet fever, 19 phthisis, 9 diphtheria, 4 erysipelas, and one enteric fever. Among the 375 cases of infectious diseases in hospital at the close of the week were 132 cases of scarlet fever, 64 of measles, 53 of whooping-cough, 51 of phthisis, 47 of diphtheria, 9 of erysipelas, 3 of chicken-pox, 2 of cerebro-spinal fever, 2 of enteric fever, and one of puerperal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 12th June, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions and Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature and Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 12th June, 1909:—

"So far as the greater part of Ireland is concerned, this week was marked by drought, cloudy skies, and cold northerly winds. Only on the extreme northern coast did rain fall, and there merely in the form of local showers. England was less fortunate in the matter of weather owing to the relative proximity of low-pressure areas both over France and Germany and in Scandinavia. On the other hand, an anticyclone of moderate intensity brooded on the Atlantic to the westward of Ireland throughout the week, extending to Iceland during the last three days. In that island, fair, warm weather was enjoyed on several days, and at 7 a.m. of Friday the thermometer read 71° at Akureyri (lat. 65° 40' N.), that being the highest temperature recorded at any station in Western Europe at the time. Sunday was a cold day with bright sunshine in the afternoon. During the following night the thermometer fell in the City of Dublin to 42° in the screen and 39° on the ground. Brilliant sunshine on Monday sent the thermometer up 20° from the low minimum of the preceding night, and the reading of 62° was also the highest recorded during the week. A succession of very cloudy days followed, save that on Thursday afternoon there were some hours of bright sunshine. A cold night succeeded, the thermometer falling to 44° in the screen and to 41° on the ground in the City. On Saturday afternoon a light easterly sea-breeze caused dense clouds to form in Dublin, and a slight dropping shower occurred about 3.30 p.m. In this City the mean height of the barometer was 30.118 inches, the range of pressure being from 29.927 inches at 9 a.m. of Sunday (wind, E.N.E.) to 30.218 inches at 9 a.m. of Wednesday (wind, N.W.). The corrected mean temperature was 52.5°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 53°. On Monday the screened thermometers rose to 62° from a minimum of 42°. Northerly (N.E. to N.W.) winds prevailed. There was no measurable rainfall. A solar halo was seen at noon of Monday.

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.953 inches. The highest reading (30.051) was on Wednesday at 9 a.m., wind N.W., and the lowest (29.758) on Sunday at 9 a.m., wind N.E.

The mean temperature for the week was 50.1°, being 4.1° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Tuesday, on which day the thermometer registered 61.4°, and was lowest on Monday, the mercury having fallen to 33.3°. The mean of the Dry Bulb for the week was 51.2° and of the Wet Bulb 48.8°. The mean humidity of the air was .84, complete saturation being represented by 1.0. There was no rainfall during the week.

At Greenwich the mean temperature for the week was 50.2°, the maximum 68.0°, and the minimum 38.3°; at Glasgow the maximum was 64.2°, the minimum 37.7°, and the mean 52.5°; and at Edinburgh the maximum was 63.5°, the minimum 38.9°, and the mean 50.5°. The rainfall at Greenwich measured 0.79 in., and at Edinburgh, 0.01 in. There was no rainfall recorded at Glasgow.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 19TH JUNE, 1909.

[No. 24.]

*General Register Office, Charlemont House,
Dublin, 21st June, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 14·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 4·7 | 4·7 | 28·0 | 14·0 | 12·9 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 0·9 per 1,000, the rates varying from 0·0 in sixteen of the districts to 3·9 in Galway, the 5 deaths from all causes for that district including one from enteric fever. Among the 98 deaths from all causes for Belfast are one from whooping-cough, and 2 from diarrhoeal diseases. Of the 24 deaths from all causes for Cork 2 are from whooping-cough and one from diarrhoea. One of the 5 deaths from all causes for Londonderry is from scarlet fever, and of the 14 deaths from all causes for Waterford one is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 219--108 boys and 111 girls--and the deaths to 128--67 males and 61 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 16·8 in every 1,000 of the population; omitting the deaths (numbering 8) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 15·7 per 1,000. During the twenty-four weeks ending with Saturday last, the death-rate averaged 24·9, and was 1·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the deaths there were 3 from measles, 3 from whooping-cough, one death from enteric fever, and 3 deaths from diarrhoeal diseases. In each of the three preceding weeks, deaths from measles were 0, 2, and one; deaths from whooping-cough were 6, 4, and 4; deaths from enteric fever were 2, 3, and one; and deaths from diarrhoeal diseases were one, one and one.

There was one death from lobar pneumonia, there were 6 deaths from broncho-pneumonia, and 6 deaths from *pneumonia* (not defined).

Deaths from all forms of tuberculous disease, which had been 31, 28, and 31 in each of the three preceding weeks, declined to 25 deaths in the week under notice; the latter figure includes 19 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, and 3 deaths from other forms of the disease.

The deaths from malignant disease include 2 deaths from carcinoma and 3 deaths from cancer, malignant disease (undefined).

The death of one prematurely born infant was registered.

Of 7 deaths from diseases of the brain and nervous system 2 were of infants under one year of age from *convulsions*.

There were 19 deaths from diseases of the heart and blood vessels, and 8 deaths from bronchitis.

Not one death was attributed to any form of violence in the weekly records of registration.

In one instance the cause of death was "uncertified," there having been no medical attendant during the last illness; this death was that of an infant under one year of age.

Thirty-five of the persons whose deaths were registered during the week were under 5 years of age (20 being infants under one year, of whom 4 were under one month old) and 34 were aged 60 years and upwards, including 15 persons aged 70 and upwards, of whom 4 were octogenarians, and one (a female) was stated to have been aged 90 years.

Fifty-one of the deaths registered during the week occurred in hospitals and other public institutions; of this number 7 took place in the North Dublin Union Workhouse, 11 in the South Dublin Union Workhouse, and 2 in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 15·7 per 1,000; the rate in the City was 16·0 (North City Districts, 15·6; South, 16·4) and in the Suburbs, 14·3.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·3 per 1,000 inhabitants, the rate for the City being 1·4 (1·7 in the North City Districts, and 1·0 in the South), and for the Suburbs, 1·1 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (9) are equal to an annual rate of 15·9 per 1,000, Measles and whooping-cough, broncho-pneumonia and *phthisis* each caused one death.

No. 1 North City District, West (Summer-hill).—The deaths (11) are equal to an annual rate of 14·5 per 1,000. There was one death from each of the following causes:—whooping-cough, broncho-pneumonia, *pneumonia* (not defined), *phthisis*, and other tuberculous disease.

No. 2 North City District (Lisburn-street).—The deaths (10) are equivalent to an annual rate of 17·1 per 1,000, and include one death from measles, 2 deaths from broncho-pneumonia, one death from *pneumonia* (not defined), and 2 deaths from *phthisis*.

No. 3 North City District (Benburb-street).—The deaths (10) represent an annual rate of 15·7 per 1,000. There were 4 deaths from tuberculous disease and one death from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 13·6 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 27·4. Among the 3 deaths from all causes for Coolock and Drumcondra, part of, is one death each from diarrhoea and bronchitis; and the 4 deaths from all causes for Finglas and Glasnevin, part of, include one death from *phthisis*.

No. 1 South City District (South Earl-street).—The deaths (11) represent an annual rate of 14·0 per 1,000. The deaths included one from *pneumonia* (not defined), one from *phthisis*, one from tuberculous meningitis, and 4 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·3 per 1,000. There were 2 deaths from diarrhoea and 2 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (12) are equal to an annual rate of 14·6 per 1,000, and include one death from whooping-cough, one death from broncho-pneumonia, and one death from *phthisis*.

No. 4 South City District (Grand Canal-street).—The deaths (13) are equivalent to an annual rate of 19·1 per 1,000. Tuberculous phthisis (*phthisis*) caused 2 deaths, and diseases of the respiratory system caused 2 deaths.

New Kilmmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000. One of the 2 deaths registered was from *phthisis*.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 18·5; Pembroke, 7·3; Blackrock, 11·9; and Kingstown, 20·7. The deaths from the principal epidemic diseases tabulated for these districts include one from enteric fever for Rathmines and Rathgar and one from measles for Kingsall causes for Pembroke include one death each from broncho-pneumonia and tuberculous phthisis; of the 2 deaths from all causes for Blackrock one was caused by *pneumonia* (not defined) and one by tuberculous meningitis; and the 7 deaths from all causes for Kingstown include one from *pneumonia* (not defined).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 19th June, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of cerebro-spinal fever reported during week ended 29th May, and one case during week ended 19th June.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 19th June, 1909.

From this it appears that:—

Eight cases of measles were admitted into hospital during the week, 8 were discharged, and 31 cases remained under treatment at its close.

Ten cases of scarlet fever were admitted to hospital, 22 were discharged, and 64* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Four cases of diphtheria were admitted to hospital, 12 were discharged, and 30 patients remained under treatment at the close of the week.

Ten cases of enteric fever were admitted to hospital during the week, 9 were discharged, and 41 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 11 cases of pneumonia were admitted to hospital, 12 were discharged, and 38 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11·4) was equal to an average annual death-rate of 12·3 per 1,000 persons living, the average rate for 8 principal towns of Scotland was 15·5 per 1,000, the rate for Glasgow being 16·9 and for Edinburgh 16·3.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 19th June. From this Report it appears that of a total of 52 cases notified, 25 were scarlet fever, 14 phthisis, 6 diphtheria, 5 erysipelas, one puerperal fever, and one enteric fever. Among the 370 cases of infectious diseases in hospital at the close of the week were 141 cases of scarlet fever, 61 of measles, 50 of phthisis, 45 of diphtheria, 40 of whooping-cough, 13 of erysipelas, 3 of chicken-pox, 3 of enteric fever, and 2 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 19th June, 1900, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1900. (b) Formerly described as 'Simple Continued Fever.' (c) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings of the stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Margree for Sligo, and those at Carrickmacross for Carrickmacross.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 19th June, 1909:—

"Save for a few light showers which fell on Friday evening and Saturday morning, the drought continued in Dublin through this week also. Until Friday an anticyclone lay over Ireland and upon the Atlantic between this country and Iceland. On the day named this high pressure system moved southwards and at the same time spread eastwards across the South of England and France to Germany. The first three days were brilliantly fine in Dublin, light easterly seabreezes prevailing in the daytime, while such clouds as appeared moved across the sky from N. or N.N.W. On Wednesday the amount of cloud increased, but the direction was still northerly. The first sign of a change in the main drift of air was the appearance of cirrus cloud on Thursday morning. It came from N.N.W., and in it a solar halo was developed. Friday morning found an atmospheric depression spreading across Iceland from the westward. This system subsequently affected the weather in Scotland and Ireland. The wind backed to W., the atmosphere became warmer and moister, clouds again increased, and finally refreshing showers fell. The changes here indicated progressed to the close of the week, when the period of polar winds and dry, cold weather seemed to be drawing to a close in favour of an equatorial, or oceanic, air-current, accompanied by increased humidity and a higher temperature. In Dublin the mean height of the barometer was 30.295 inches, the range of pressure being from 30.449 inches at 9 p.m. of Thursday (wind, N.W.) to 30.044 inches at 9 p.m. of Saturday (wind, W. by N.). The corrected mean temperature was 58.1°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 58.5°. On Sunday the screened thermometers fell to 49.0°, on Monday they rose to 67.1°. The prevalent winds were E. and N.W. The rainfall was .016 inch on one 'rain-day.'"

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.134 inches. The highest reading (30.292) was on Thursday at 9 p.m., air calm, and the lowest (29.885) on Saturday at 9 p.m., wind S.W.

The mean temperature for the week was 55.9°, being 1.9° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Tuesday, on which day the thermometer registered 67.9°, and was also lowest on that day, the mercury having fallen to 40.9°. The mean of the Dry Bulb for the week was 57.4° and of the Wet Bulb 54.0°. The mean humidity of the air was .80, complete saturation being represented by 1.0. The rainfall during the week measured 0.030 inch.

At Greenwich the mean temperature for the week was 56.3°, the maximum 74.3°, and the minimum 45.1°; at Glasgow the maximum was 73.0°, the minimum 37.5°, and the mean 56.8°; and at Edinburgh the maximum was 65.8°, the minimum 41.6°, and the mean 54.2°. The rainfall at Greenwich measured 0.05 in.; at Glasgow 0.08 in.; and at Edinburgh, 0.11 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 26TH JUNE, 1909.

[No. 25.]

*General Register Office, Charlemont House,
Dublin, 28th June, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 17·7 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 47 | 280 | 140 | 47 | 129 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·1 per 1,000, the rates varying from 0·0 in sixteen of the districts to 4·9 in Kilkenny, the 4 deaths from all causes for that district including one from enteric fever. Among the 110 deaths from all causes for Belfast are 5 from whooping-cough, and 5 from diarrhoeal diseases. Of the 30 deaths from all causes for Cork 4 are from whooping-cough, and one of the 15 deaths from all causes for Waterford is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 233—119 boys and 114 girls—and the deaths to 155—81 males and 74 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 20·3 in every 1,000 of the population; omitting the deaths (numbering 5) of persons admitted into public institutions from localities outside the Area, the rate was 19·6 per 1,000. During the twenty-five weeks ending with Saturday last, the death-rate averaged 24·7, and was 1·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

Of the 155 deaths registered, there were 5 deaths from whooping-cough, 3 from diarrhoeal diseases, and one from cerebro-spinal fever. In the three preceding weeks, deaths from whooping-cough numbered 4, 4, and 3; deaths from diarrhoeal diseases one and one and 3; and deaths from cerebro-spinal fever, 0, 0, and 0.

There were 4 deaths from broncho-pneumonia and 6 from *pneumonia* (not defined).

All forms of tuberculous disease caused 45 deaths, including 31 from tuberculous phthisis (*phthisis*), 4 from tuberculous meningitis, one death from tuberculous peritonitis, one from *tubus mesenterica*, and 8 deaths from other forms of tuberculous disease. The deaths from all forms of tuberculous disease in the 3 preceding weeks numbered 28, 31 and 25, respectively.

Three deaths were ascribed to carcinoma and one to cancer, malignant disease (undefined).

The deaths of five infants prematurely born were registered.

Included in the 11 deaths from diseases of the brain and nervous system are 7 deaths from *convulsions*, all of the latter being those of children under 5 years of age, of whom 6 were under one year of age.

Of 19 deaths from diseases of the heart and blood vessels, 3 were caused by aneurysm; and there were 11 deaths from bronchitis.

There were 2 accidental deaths and one death by suicide recorded.

In 2 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; both deaths were those of infants under one year of age.

Forty-seven of the persons whose deaths were registered during the week were under 5 years of age (32 being infants under one year, of whom 18 were under one month old) and 34 were aged 60 years and upwards, including 20 persons aged 70 and upwards, of whom 4 were octogenarians, and one (a female) was stated to have been aged 90 years.

Sixty-seven of the deaths registered during the week occurred in hospitals and other public institutions; of this number 17 took place in the North Dublin Union Workhouse and 10 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 19·6 per 1,000; the rate in the City was 18·5 (North City Districts, 17·9; South, 19·1) and in the Suburbs, 23·4.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·0 per 1,000 inhabitants, the rate for the City being 1·0 (0·7 in the North City Districts, and 1·4 in the South), and for the Suburbs, 1·1 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (18) are equal to an annual rate of 22·9 per 1,000, and include one death from epidemic enteritis, 2 deaths from broncho-pneumonia, one death from *pneumonia* (not defined), 2 deaths from *phthisis*, and 2 from tuberculous meningitis.

No. 1 North City District, West (Summer-hill).—The deaths (11) are equal to an annual rate of 14·5 per 1,000. One death from whooping-cough, 3 deaths from tuberculous disease, and one death from bronchitis were recorded.

No. 2 North City District (Lisburn-street).—The deaths (12) are equivalent to an annual rate of 20·6 per 1,000. There were 4 deaths from tuberculous phthisis (*phthisis*), and 2 from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (13) represent an annual rate of 20·4 per 1,000. Among them were 5 deaths from tuberculous disease.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumecondra, part of, 13·6 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 13·7. Among the 3 deaths from all causes for Coolock and Drumecondra, part of, there was one from tuberculous peritonitis; and of the 2 deaths recorded for Finglas and Glasnevin, part of, one was from *phthisis* and one from bronchitis.

No. 1 South City District (South Earl-street).—The deaths (13) represent an annual rate of 16·5 per 1,000. There were 2 deaths from whooping-cough, one death each from broncho-pneumonia and *pneumonia* (not defined), 2 deaths from tuberculous phthisis, and 2 from bronchitis.

No. 2 South City District (Castle-street).—The deaths (8) are equal to an annual rate of 19·4 per 1,000. Four deaths were caused by tuberculous phthisis (*phthisis*), and one by bronchitis.

No. 3 South City District (Peter-street).—The deaths (17) are equal to an annual rate of 20·7 per 1,000, and include one death from broncho-pneumonia, 5 deaths from tuberculous disease, 2 from bronchitis, and one accidental death.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000. Among them are one death from epidemic enteritis, one from *pneumonia* (not defined), 4 deaths from tuberculous disease, 2 from bronchitis, and one accidental death.

New Kimmurham District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. Diarrhoea and tuberculous meningitis each caused one death.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 25·7; Pembroke, 27·4; Blackrock, 11·9; and Kingstown, 17·8. The deaths from the principal epidemic diseases tabulated for these districts include one from whooping-cough for Rathmines and Rathgar and one from whooping-cough for Pembroke. The 18 deaths from all causes for Rathmines and Rathgar include one death from cerebro-spinal fever, one death from *pneumonia* (not defined) and 4 deaths from tuberculous disease; of the 15 deaths from all causes for Pembroke one was caused by *pneumonia* (not defined), 3 were due to tuberculous phthisis (*phthisis*), and there was one death by suicide; and of the 6 deaths from all causes for Kingstown there were 3 from tuberculous phthisis (*phthisis*).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 26th June, 1909, and each of the preceding, three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of cerebro-spinal fever reported during week ended 19th June, and one case during week ended 26th June.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 26th June, 1909.

From this it appears that:—

Five cases of measles were admitted into hospital during the week, 7 were discharged, there were 2 deaths, and 27 cases remained under treatment at its close.

Twenty-two cases of scarlet fever were admitted to hospital, 10 were discharged, and 76* cases remained under treatment at the close of the week.

There was no case of typhus under treatment in hospital during the week.

Eight cases of diphtheria were admitted to hospital, 11 were discharged, and 27 patients remained under treatment at the close of the week.

Five cases of enteric fever were admitted to hospital during the week, 5 were discharged, and 41 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 11 cases of pneumonia were admitted to hospital, 14 were discharged, and 35 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·1) was equal to an average annual death-rate of 12·1 per 1,000 persons living the average rate for 8 principal towns of Scotland was 12·7 per 1,000, the rate for Glasgow being 11·8 and for Edinburgh 11·9.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 26th June. From this Report it appears that of a total of 27 cases notified, 11 were scarlet fever, 7 phthisis, 5 diphtheria, one erysipelas, one puerperal fever, one cerebro-spinal fever, and one enteric fever. Among the 384 cases of infectious diseases in hospital at the close of the week were 133 cases of scarlet fever, 90 of measles, 71 of phthisis, 45 of whooping-cough, 40 of diphtheria, 10 of erysipelas, 3 of enteric fever, 3 of cerebro-spinal fever, and 2 of chicken-pox.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 26th June, 1960, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS, exclusive of Deaths in Public Institutions of Persons admitted from other Districts, with the number of Deaths from some of the PRINCIPAL CAUSES, and 41 UNCAUSED or Uninvestigated Deaths. Also the **Temperature and Rainfall** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(n) According to the Census of 1991, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1989.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 26th June, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 26th June, 1909:—

"Throughout this week the British Isles, and North-western Europe in general, were under the influence of a cyclonic distribution of atmospheric pressure, and the weather was consequently broken, cloudy, rainy, cold, and in a word unseasonable for Midsummer. At the close of the previous week depressions were beginning to affect our N.W. and N. coasts. On Sunday morning a well-defined cyclonic system lay upon the Atlantic off the N.W. of Ireland and W. of Scotland. Its S.W. winds brought heavy showers, a sudden dash of rain falling in Dublin at 10 a.m. The barometer continued to fall rapidly and generally, and the weather broke completely, a heavy down-pour of rain taking place in Dublin between 9 a.m. and 4 p.m. of Monday. At 7 a.m. of Tuesday the centre of a large depression, stretching from the south coast of Iceland to the Pyrenees, was found over Mayo, the barometer reading as low as 29.18 inches at Blacksod Point. Thunder showers occurred during the day, the disturbance hanging over Ireland throughout. In the course of Wednesday the system travelled south-eastwards to the South of England, but its northerly winds brought no improvement in the weather to Ireland—on the contrary, severe thunderstorms accompanied by heavy downpours of rain and hail passed over this country on Thursday afternoon. On the morning of this day the depression was central in London, causing later on a thunder and hail storm of great violence. The disturbance now took a northerly course, so that cold, cloudy, and showery weather again spread over Ireland. Saturday, though cloudy and cold, was dry. In Dublin the mean height of the barometer was 29.628 inches, pressure receding to 29.236 inches at 4 p.m. of Tuesday (wind, S.W.) and increasing to 29.997 inches at 9 p.m. of Friday (wind, N.N.W.). The corrected mean temperature was 53.9°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 53.6°. On Sunday the screened thermometers rose to 63.6°: on Tuesday they sank to 47.9°. The dominant winds were N. and N.N.W. Rain fell on 5 days to the amount of 1.482 inches, .601 inch being recorded on Wednesday. Thunder occurred on Tuesday and Thursday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.472 inches. The highest reading (29.847) was on Friday at 9 p.m., wind N.W., and the lowest (29.102) on Tuesday at 9 p.m., air calm.

The mean temperature for the week was 52.7°, being 2.8° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 63.6°, and was lowest on Tuesday, the mercury having fallen to 41.1°. The mean of the Dry Bulb for the week was 52.4° and of the Wet Bulb 50.0°. The mean humidity of the air was .84, complete saturation being represented by 1.0. The rainfall during the week measured 1.367 inches.

At Greenwich the mean temperature for the week was 55.8°, the maximum 73.0°, and the minimum 48.3°; at Glasgow the maximum was 65.0°, the minimum 42.0°, and the mean 54.3°; and at Edinburgh the maximum was 61.0°, the minimum 44.6°, and the mean 52.1°. The rainfall at Greenwich measured 1.45 ins.; at Glasgow 2.40 ins.; and at Edinburgh, 1.58 ins.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 3RD JULY, 1909.

[No. 26.]

*General Register Office, Charlemont House,
Dublin, 5th July, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 17·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 28·0 | 14·0 | 4·7 | 18·7 | 16·4 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·1 per 1,000, the rates varying from 0·0 in fourteen of the districts to 7·8 in Galway, the 11 deaths from all causes for that district including one from typhus and one from diarrhoea. Among the 107 deaths from all causes for Belfast are one from enteric fever and 3 from diarrhoeal diseases. Of the 31 deaths from all causes for Cork there is one death each from whooping-cough and diphtheria; and one of the 13 deaths from all causes for Waterford is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 248—119 boys and 129 girls—and the deaths to 150—71 males and 79 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 19·6 in every 1,000 of the population; omitting the deaths (numbering 9) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-13 of Table II.

from localities outside the Area, the rate was 18·5 per 1,000. During the twenty-six weeks ending with Saturday last, the death-rate averaged 24·5, and was 1·6 under the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths (150) from all causes include 2 from measles, one death from scarlet fever, 4 deaths from whooping-cough, one death from diphtheria, and 6 deaths from diarrhoeal diseases. In each of the three preceding weeks, deaths from measles were one, 3, and 0; deaths from scarlet fever were one, 0, and 0; deaths from whooping-cough were 4, 3, and 5; deaths from diphtheria were 0, 0, and 0; and deaths from diarrhoeal diseases were one, 3, and 3. Influenza, which caused 6 deaths in the week ending the 12th June, but not one in the two succeeding weeks, caused 4 deaths in the period under notice.

There were 6 deaths from broncho-pneumonia and 3 deaths from *pneumonia* (not defined).

Of 26 deaths from all forms of tuberculous disease, 15 were from tuberculous phthisis (*phthisis*), 3 from tuberculous meningitis, one death from each of tuberculous peritonitis and *tabes mesenterica*, and 6 deaths from other forms of the disease. In the three preceding weeks, deaths from all forms of tuberculous disease numbered 31, 25, and 45 respectively.

Carcinoma caused 6 deaths, and there was one death from cancer, malignant disease (undefined).

The deaths of 6 infants were attributed to prematurity.

The 10 deaths assigned to diseases of the brain and nervous system include the deaths of 4 infants under one year of age from *convulsions*.

Twenty-four deaths from diseases of the heart and blood vessels and 12 deaths from bronchitis were registered.

Of 2 deaths from violence, one was assigned to accidental drowning and one to accidental poisoning.

In no instance was the cause of death "uncertified."

Forty-nine of the persons whose deaths were registered during the week were under 5 years of age (32 being infants under one year, of whom 11 were under one month old) and 47 were aged 60 years and upwards, including 27 persons aged 70 and upwards, of whom 6 were octogenarians.

Seventy of the deaths registered during the week occurred in hospitals and other public institutions; of this number 15 took place in the North Dublin Union Workhouse, 20 in the South Dublin Union Workhouse, and one in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 18·5 per 1,000; the rate in the City was 19·9 (North City Districts, 21·2; South, 18·5) and in the Suburbs, 13·7.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 17 per 1,000 inhabitants, the rate for the City being 19·7 (21 in the North City Districts, and 10 in the South), and for the Suburbs, 11 per 1,000.

No. 1 North City District, East (Clarendon-street, North).—The deaths (13) are equal to an annual rate of 22·9 per 1,000, and include 2 deaths from influenza, 3 deaths from broncho-pneumonia, and 2 deaths from tuberculous disease.

No. 1 North City District, West (Summer-hill).—The deaths (22) are equal to an annual rate of 29·0 per 1,000. Among the deaths were one from measles, 2 from whooping-cough, one from epidemic enteritis, one from broncho-pneumonia, 3 from tuberculous phthisis (*phthisis*), 4 from diseases of the respiratory system, and one death by drowning.

No. 2 North City District (Lisburn-street).—The deaths (12) are equivalent to an annual rate of 20·6 per 1,000. Of the deaths there was one from diarrhoea, one from *pneumonia* (not defined), 2 from tuberculous phthisis, and one death from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (11) represent an annual rate of 17·3 per 1,000. The 11 deaths include one death from diarrhoea and one death from hypostatic pneumonia.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 39·2 per 1,000 inhabitants; Coolock and Drumcondra, part of, 4·5; and Finglas and Glasnevin, part of, 6·9. Of the 4 deaths from all causes for Clontarf and Howth, No. 1, part of, there was one death each from measles and whooping-cough; and the only death recorded for Coolock and Drumcondra, part of, was one from tuberculous meningitis.

No. 1 South City District (South Earl-street).—The deaths (17) represent an annual rate of 21·6 per 1,000, and include one death from diarrhoea, 2 deaths from broncho-pneumonia, 2 deaths from tuberculous phthisis (*phthisis*), and one death from bronchitis.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·8 per 1,000. Whooping-cough and diphtheria each caused one death, there were 4 deaths from tuberculous disease and one death from bronchitis.

No. 3 South City District (Peter-street).—The deaths (14) are equal to an annual rate of 17·1 per 1,000. The deaths include one from *pneumonia* (not defined), 4 from tuberculous disease, and 3 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (11) are equivalent to an annual rate of 16·2 per 1,000. Of the total deaths one was from tuberculous disease, one was from bronchitis, and one was due to coal gas poisoning.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000. There was not one death from any of the general diseases registered in this district.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 15·7; Pembroke, 12·8; Blackrock, 6·0; and Kingstown, 14·8. The deaths from the principal epidemic diseases tabulated for these districts comprise one death from scarlet fever and one from diarrhoea for Rathmines and Rathgar. Among the 11 deaths from all causes for the last-named district are 2 from tuberculous disease. Of the 7 deaths from all causes for Pembroke there was one death each from influenza, *pneumonia* (not defined), and bronchitis; the only death recorded for Blackrock was one death from influenza; and the 5 deaths from all causes for Kingstown include 3 from tuberculous phthisis (*phthisis*).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 3rd July, 1909, and each of the preceding, three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of cerebro-spinal fever reported during week ended 19th June, and one case during week ended 26th June.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 3rd July, 1909.

From this it appears that:—

Eleven cases of measles were admitted into hospital during the week, 6 were discharged and 32 cases remained under treatment at its close.

Fourteen cases of scarlet fever were admitted to hospital, 15 were discharged, there was one death, and 74* cases remained under treatment at the close of the week.

Two cases of typhus were admitted to hospital during the week, and remained under treatment at its close.

Five cases of diphtheria were admitted to hospital, 6 were discharged, and 26 patients remained under treatment at the close of the week.

Eight cases of enteric fever were admitted to hospital during the week, 11 were discharged and 38 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 7 cases of pneumonia were admitted to hospital, 15 were discharged, there was one death, and 26 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11·1) was equal to an average annual death-rate of 11·7 per 1,000 persons living the average rate for 8 principal towns of Scotland was 13·3 per 1,000, the rate for Glasgow being 13·2 and for Edinburgh 13·7.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 3rd July. From this Report it appears that of a total of 42 cases notified, 26 were scarlet fever, 8 diphtheria, 5 phthisis, 2 erysipelas, and one cerebro-spinal fever. Among the 373 cases of infectious diseases in hospital at the close of the week were 134 cases of scarlet fever, 90 of measles, 45 of phthisis, 36 of whooping-cough, 36 of diphtheria, 9 of erysipelas, 5 of chicken-pox, 3 of enteric fever, and 3 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 3rd July, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.F.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 3rd July, 1909:—

"During the first two days of this week the British Isles remained under the influence of the sluggishly-moving atmospheric depression, which had caused such broken, showery and thundery weather in the previous week. The light N.W. winds of the system were still blowing over Ireland and temperature was low by night—early on Sunday morning the thermometer sank in Dublin to 44° 8' in the screen and to 42° 0' on the ground. At 4 p.m. of the same day a downpour of rain occurred, yielding '62 inch in the gauge at Dundrum, Co. Dublin. The thermometer rose no higher than 58° 2' in the course of the day, which resembled March rather than June. Great gloom prevailed at 11 a.m. of Monday and distant thunder was heard shortly afterwards. The cloud-movement from W. at this time heralded a change, although the ground current continued easterly, the weather taking up and remaining extremely fine till Friday, when light showers fell in the afternoon. On Thursday a cloudless forenoon was followed by the appearance in the afternoon of a sheet of cirrus in which a very perfect solar halo developed. This cloud-formation indicated the near approach of an equatorial air-current, and this duly arrived on Friday, when a warm S.W. wind sent the thermometer up to 72° 9' in the screen. On Saturday this air-current was fully established, and temperature rose from 66° 2' at 9 a.m. to a maximum of 73° 2'. At 3 p.m. a downpour of rain occurred, '22 inch being measured by 4 p.m. The evening was fine. In Dublin the mean height of the barometer was 30° 041 inches, pressure ranging between 29° 924 inches at 9 p.m. of Sunday (wind, W.N.W.) and 30° 217 inches at 9 a.m. of Thursday (wind, E.N.E.). The corrected mean temperature was 58° 0', the mean dry bulb reading at 9 a.m. and 9 p.m. being 57° 7'. The dominant winds were E,N,E. and W.N.W. Rain fell on 4 days to the amount of '593 inch, '349 inch being measured on Sunday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.884 inches. The highest reading (30.052) was on Thursday at 9 a.m., wind E., and the lowest (29.771) on Monday at 9 a.m., air calm.

The mean temperature for the week was 55.6°, being 1.4° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 71.2°, and was lowest on Sunday, the mercury having fallen to 38.8°. The mean of the Dry Bulb for the week was 57.0° and of the Wet Bulb 54.3°. The mean humidity of the air was .84, complete saturation being represented by 1.0. The rainfall during the week measured 0.660 inch.

At Greenwich the mean temperature for the week was 55.9°, the maximum 75.6°, and the minimum 44.6°; at Glasgow the maximum was 68.8°, the minimum 43.0°, and the mean 57.4°; and at Edinburgh the maximum was 66.5°, the minimum 42.3°, and the mean 52.8°. The rainfall at Greenwich measured 0.44 in.; at Glasgow 0.41 in.; and at Edinburgh, 0.17 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.] QUARTER ENDING SATURDAY, 3RD JULY, 1909. [No. 26A.

DUBLIN REGISTRATION AREA.—Births.—In the Dublin Registration Area, which consists of the city of Dublin and the urban districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, the total area thereof being 13,757 statute acres, and the population, estimated to the middle of 1909, 398,356, there were registered during the thirteen weeks ended on Saturday, 3rd July, 1909, 3,004 births—1,527 boys and 1,477 girls—being equal to an annual ratio of 1 in 33·2, or 30·2 in every 1,000 of the population.

The number of births registered in the city was 2,578, equivalent to an annual rate of 33·6 in every 1,000 of the population; and in the urban districts named above, 426, equal to an annual rate of 18·6 in every 1,000 of the population.

There were registered in London during the same period 30,043 births—being equal to an annual birth-rate of 24·9 in every 1,000 of the estimated population; in Glasgow there were registered 6,150, being equal to 28·2 per 1,000; and in Edinburgh, 2,008—a number affording an annual birth-rate of 22·6 in every 1,000 of the estimated population.

Deaths.—The number of deaths registered in the Dublin Registration Area during the quarter was 2,185—1,082 males and 1,103 females—affording an annual ratio of 1 in 45·6, or 21·9 in every 1,000 of the estimated population; omitting the deaths (110) of persons admitted into Public Institutions from localities outside the Area, the rate was 20·8 per 1,000. The annual mean mortality represented by the deaths registered during the second quarter of the ten years, 1899–1908, in the Dublin Registration Area as then constituted, was 23·6 per 1,000 of the estimated mean population of those years.

The number of deaths of inhabitants* of the North City districts registered last quarter was 852, representing an annual mortality of 21·7 in every 1,000 of the population; and the number in the South City districts was 836, equivalent to a rate of 22·3 per 1,000. In the urban districts the number of deaths registered was 387, being equal to an annual death-rate of 16·9 in every 1,000.

The number of deaths registered in London during the same period was 16,245—a number equal to an annual rate of mortality of 13·4 in every 1,000 of the inhabitants; in Glasgow the number was 3,567, equal to 16·4 in every 1,000; and in Edinburgh, 1,395, affording an annual death-rate of 15·7 in every 1,000 of the estimated population.

Diseases.—The number of deaths from the principal epidemic diseases† registered in the Dublin Registration Area during last quarter was 164, being 25 below the number for the preceding quarter; and the annual rate per 1,000 of the population represented by the deaths from these diseases was 1·7, being 0·2 below the rate for the preceding three months.

The following tabular statement shows the mortality from each of the principal epidemic diseases in the period under notice, and the average number of deaths from these diseases which occurred in the corresponding period of the 10 years, 1899–1908:—

| NAMES OF DISEASES. | No. of Deaths in June Quarter, 1909. | Average No. of Deaths in June Quarters, 1899- 1908. |
|-------------------------------------|--|---|
| Small-pox, - - - - | - | 3 |
| Measles, - - - - | 30 | 25 |
| Scarlet Fever, - - - - | 5 | 7 |
| Typhus, - - - - | 1 | - |
| Whooping-cough, - - - - | 76 | 43 |
| Diphtheria, - - - - | 9 | 10 |
| Pyrexia (origin uncertain), - - - - | 3 | 1 |
| Enteric Fever, - - - - | 17 | 17 |
| Diarrhoeal Diseases, - - - - | 23 | 19 |

Small-pox.—There was no mortality from small-pox, nor was there any report of the existence of the disease in the Dublin Registration Area during the period.

Measles.—Deaths from measles were 30 in number; in the three quarterly periods preceding, such deaths numbered 55, 54, and 75 respectively, the average for the June quarter of the preceding 10 years was 25, and the rate representing the above-mentioned 30 deaths was 0·30 per 1,000 of the population of the Dublin Registration Area estimated to the middle of the year 1909. From Table I. it appears that 10 deaths from measles occurred in Dublin hospitals, and that 32 cases were under treatment at the close of the quarter. Of the total deaths from measles 12 appertained to the city districts of North Dublin Union, 11 to the city districts of South Dublin Union, 5 to the Urban Districts, and 2 were deaths of persons admitted to institutions from without the Registration Area.

Scarlet Fever.—Of 5 deaths from scarlet fever, 2 were of residents of Rathmines and Rathgar Urban District, 2 of Pembroke Urban District, and one appertained to the district of North City No. 3. The deaths in each of the three preceding quarters were 5, 3, and 4 respectively, and the average number of deaths from scarlet fever in the June quarter of the 10 years, 1899–1908, is 7. There were altogether 219 cases of scarlet fever under treatment in hospitals during the quarterly period; of the total 140 were discharged, 5 died, and 74 cases remained under treatment at the end of the period.

* The death-rates referring to the several Dublin Districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in Public Institutions according to the localities from which the deceased persons were admitted.

† See note (*), p. 432b.

Typhus.—One death from typhus was registered, appertaining to the district of South City No. 4. From Table I. it appears that this death occurred in hospital, and that 2 cases remained under treatment in hospital at the close of the quarter.

Whooping-cough.—In comparison with the deaths from other principal epidemic diseases, the deaths from whooping-cough during the period under notice, numbering 76, are in excess of those from any other of these diseases, having been 14, 27, and 41 in each of the 3 quarters preceding. The deaths are also above the average (43), and represent a rate of 0·76 per 1,000 of the estimated population of the area. Of the total deaths 32 appertained to the city districts of North Dublin Union, 34 to the city districts of South Dublin Union, and 10 to the Urban Districts.

Diphtheria.—A decline to 9 deaths from 23 registered in the March quarter of the year appears to have occurred; this number (9) is also below the average (10), and represents a rate of ·09 per 1,000 of the population. Of the 9 deaths 2 were of residents of North Dublin city districts, 6 were of South Dublin city districts, 2 appertained to Rathmines and Rathgar Urban District, and one to Pembroke Urban District, and one was the death of a person admitted to hospital from outside the Dublin Registration Area. In Table I. statistics of the numbers of patients who were treated in Dublin hospitals for diphtheria are set forth; it may be seen that 136 cases were under treatment, 103 were discharged, there were 7 deaths, and 26 cases were under treatment on the 3rd July, 1909.

Enteric Fever.—The 17 deaths from enteric fever represent an annual death-rate from the disease of 0·17 per 1,000 of the population, and are equal to the average for the June quarter of the 10 years preceding. In the three quarterly periods preceding, deaths from enteric fever were 12, 29, and 25 respectively. Of the deaths, 9 appertained to North Dublin city districts, 3 to South Dublin city districts, 3 to the urban district of Rathmines and Rathgar, and 2 deaths were of persons admitted to hospitals from places situated without the Area.

Diarrhœal Diseases.—The number of deaths attributed to diarrhœal diseases was 23, the average for the June quarter of the preceding 10 years being 19. The deaths equal an annual rate of 0·23 per 1,000. Of the 23 deaths 11 were of residents of North Dublin city, 9 of South Dublin city, one from each of the urban districts of Rathmines and Rathgar and of Kingstown, and one was that of a person admitted from without the Registration Area.

Influenza.—The fatalities attributed to influenza numbered 46; in the 3 preceding quarters the deaths were 9, 17, and 29 respectively. The average for the June quarter of the preceding 10 years is 40, and the deaths registered in the June quarter of 1909 represent an annual death rate of 0·46 per 1,000 of the estimated population.

Cerebro-spinal Fever.—During the period under notice 7 deaths were attributed to cerebro-spinal fever (including one death of a person admitted from without the Area). In the 3 preceding quarters deaths from this disease numbered 5, 2, and 2 respectively.

Pneumonia.—The total deaths from pneumonia (all forms) amount to 202, and equal an annual rate of 2·03 per 1,000 of the population of the area; the average for the June quarter of the preceding 10 years being 170 deaths.

Tuberculous Disease.—To one or other of the forms of tuberculous disease the deaths of 411 persons were attributed. This number represents an annual death-rate of 4·13 per 1,000 of the population of the Dublin Registration Area, estimated to the middle of the year. The deaths in the preceding 4 quarterly periods were as follows—435, 377, 452, and 449 respectively. Of the total deaths 275 were from tuberculous phthisis (*phthisis*), 40 were caused by tuberculous meningitis, 9 by tuberculous peritonitis, 11 by *tubercles mesenterica*, and 76 by other forms of the disease. From Table II. it appears that of the total deaths from tuberculous disease 161 appertained to North Dublin city, 160 to South Dublin city, 29 to the urban district of Rathmines and Rathgar, 15 to the urban district of Pembroke, 6 to the urban district of Blackrock, and 11 to the urban district of Kingstown. The annual rates represented by the above figures were 4·10, 4·27, 3·17, 2·10, 2·74, and 2·50 per 1,000 of the respective estimated population of these areas.

Malignant Disease.—In the aggregate, deaths from the varieties of malignant disease amounted to 99; this figure equals an annual death rate for malignant disease of 0·99 per 1,000. In the preceding quarter the number of such deaths was 107, represented by a rate of 1·07 per 1,000 of the population.

Premature Birth.—The deaths of 61 infants, prematurely born, were registered.

Diseases of the Brain and Nervous System.—The total deaths (134) from the diseases in this group afford an annual rate of 1·35 per 1,000 of the population, and include 42 deaths from *convulsions*; of the latter figure 41 were deaths of infants under 5 years of age.

Diseases of the Heart and Blood Vessels.—In the aggregate the deaths from such diseases numbered 314, and equal an annual rate of 3·15 per 1,000 of the population of the Dublin Registration Area.

Diseases of the Respiratory System.—Of 254 deaths from diseases of the organs of respiration there were 228 deaths from bronchitis; the annual rate represented by the 254 deaths was 2·55 per 1,000 of the population.

Accidental Violence.—There were 34 deaths caused by accidental causes. In this figure 7 deaths by burns, scalds, or explosions (including 3 deaths of children under 5 years of age), 5 deaths by drowning, and 3 deaths by vehicles and horses are included.

Homicide.—The deaths of 3 persons were attributed to homicide.

Suicide.—Four persons terminated their existence by their own act.

TABLE I.—The NUMBER of CASES of the undermentioned DISEASES treated in Dublin Hospitals during the **Quarter** (13 weeks) **ended Saturday, 3rd July, 1909.**

| DISEASES. | No. of Cases in Hospital at close of previous quarter. | No. admitted during quarter. | Discharged. | Died. | No. under treatment on above date. |
|----------------------|--|------------------------------|-------------|-------|------------------------------------|
| Small-pox, . . . | — | — | — | — | — |
| Measles, . . . | 65 | 118 | 141 | 10 | 32 |
| Scarlet Fever, . . . | 44 | 175 | 140 | 5 | 74* |
| Typhus, . . . | — | 3 | — | 1 | 2 |
| Diphtheria, . . . | 35 | 101 | 103 | 7 | 26 |
| Enteric Fever, . . . | 37 | 92 | 79 | 12 | 38 |
| Pneumonia, . . . | 34 | 174 | 165 | 17 | 26 |

* Exclusive of 15 patients in Beneavin, the convalescent home of Cork-street Fever Hospital.

In 37 instances the cause of death was uncertified, there having been no medical attendant during the last illness. Of the 37 cases, 25 (or 67·6 per cent.) were deaths of children under 5 years of age: these 25 deaths form 3·8 per cent. of the total number of deaths of children of that age. Of the deaths of 138 infants under one month old registered, there were 11 (or 8·0 per cent.) regarding which the cause was uncertified.

From Table II., on pages 430-1, it will be seen that, excluding 110 deaths of persons admitted into Public Institutions from localities outside the Dublin Registration Area, the number of deaths registered during the quarter was 2,075, equal to an annual rate of 20·8 per 1,000 of the estimated population, and that 158 of these deaths, representing an annual rate of 1·6 per 1,000 persons, were caused by the principal epidemic diseases.† The death-rate for the city (from all causes) was 22·0 per 1,000, and for the Urban Districts 16·9 per 1,000. The death-rate represented by the mortality from the principal epidemic diseases in the city was 1·7, and in the Urban Districts 1·2, the rates for the several districts varying from 0·5 in Blackrock Urban District to 2·7 in North City No. 1, East, the 181 deaths from all causes for that district including 3 from measles, 13 from whooping-cough, and 4 from diarrhoeal diseases.

† See note (*), page 432b.

Occupations.—Table III., on pages 432-432*a*, shows the occupations or social position of the persons whose deaths were registered during the quarter, the various callings being grouped in classes and orders, so as to show the respective rates of mortality in the several social grades of the population. From this Table it will be observed that the deaths in families of the "Professional and Independent Class" were equal to an annual rate of 17·4 per 1,000 of the persons in that class according to the Census of 1901; in the "Middle Class" the death-rate was 16·9 per 1,000; among the "Artisan Class and Petty Shopkeepers" it was 16·5; and in the "General Service Class" it was 22·7.

Ages.—Of the 2,185 persons whose deaths were registered in the Dublin Registration Area during the quarter, 645 were under 5 years of age, including 376 infants under one year of age, the latter representing a rate of 125·2 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 67·6 in every 1,000 children at that age (according to the Census of 1901); 159 were between the ages of 5 and 20, representing an annual rate of 6·0 per 1,000 persons of that age period; the total number under 20 years being equal to an annual mortality of 22·2 per 1,000 of the population at that age period (according to the Census of 1901); 343, or 10·1 per 1,000 persons, were between 20 and 40; 418, or 24·4 per 1,000, between 40 and 60; 530, or 87·3 per 1,000, between 60 and 80; 90, or 189·1 per 1,000, were aged 80 and upwards, including 16 persons aged 90 and upwards.

Public Institutions.—Of the 2,185 deaths recorded during the quarter, 943, or 43·2 per cent., occurred in public institutions, viz., 533 in the various hospitals, prisons, and lunatic asylums; 184 in the North Dublin Union Workhouse; 221 in the South Dublin Union Workhouse; and 5 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

Weather.—The mean temperature for thirteen weeks, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, was 50·4°. At Greenwich, for the quarter, it was 52·5°; at Glasgow, 51·6°; and at Edinburgh, 49·4°.

The rainfall at Dublin during the thirteen weeks measured 5·603 inches; at Greenwich, 6·57 inches; at Glasgow, 8·19 inches; and at Edinburgh, 5·61 inches.

TABLE II.—Showing for the **Quarter** (13 weeks) **ended 3rd July, 1909**, the number **AREA**, the annual Rate per 1,000 of the Population of the respective Districts represented the principal causes; also the Deaths at certain age-periods, and the number of Uncertified were admitted.

* Formerly described as "Simple Continued Fever."

Twenty-two Principal Town Districts of Ireland.—The average annual death-rate represented by the deaths from all causes registered during last quarter in the Dublin Registration Area and twenty-one of the principal Urban Districts of Ireland (exclusive of deaths in Public Institutions of persons admitted from without the districts), was 19·7 per 1,000 persons; the respective rates for the several districts being as follow, ranging in order from the lowest to the highest :—Portadown, 11·9; Clonmel, 12·2; Newry, 13·9; Drogheda, 14·1; Sligo, 16·2; Kilkenny, 16·2; Wexford, 16·5; Limerick, 16·6; Dundalk, 16·8; Armagh, 16·9; Londonderry, 17·4; Queenstown, 18·7; Belfast, 19·4; Tralee, 19·5; Ballymena, 19·5; Newtownards, 20·2; Galway, 20·6; Dublin Registration Area, 20·8; Cork, 21·9; Waterford, 22·1; Lurgan, 24·1; and Lisburn 26·5.

The average annual rate represented by the deaths from the principal epidemic diseases* in the 22 districts is 1·3 per 1,000 of the population, the rates varying from 0·0 in four of the districts to 3·3 in Ballymena; the 53 deaths from all causes registered in that district including 8 from measles and one from diphtheria. The 1,871 deaths from all causes for Belfast include one from measles 52 from whooping-cough, 5 from diphtheria, one from *pyrexia* (origin uncertain) one from enteric fever, and 29 from diarrhoeal diseases.

The following is a synopsis of the mortality from the principal epidemic diseases* in the *twenty-one provincial urban districts* already named, and Tables IV. and V. give in detail the results of the registration for the quarter :—

Small-pox.—The weekly returns contained no reference to mortality from small-pox or to the incidence of the malady.

Measles.—In Belfast, one death; in Dundalk, one death; in Lisburn, 3 deaths; and in Ballymena, 8 deaths were registered.

Scarlet Fever.—There were 2 deaths in Cork, one in Londonderry, one in Limerick, 3 in Lurgan, and one death in Kilkenny.

Typhus.—Of 3 deaths from typhus, 2 were registered in Cork and one in Galway.

Whooping-cough.—Deaths were registered as follows :—In Belfast 52, in Cork 32, in Waterford 5, in Dundalk one death and in Armagh 4 deaths.

Diphtheria.—Five deaths from diphtheria were registered in each of the cities of Belfast and of Cork, 2 were registered in Limerick, and one death was registered in each of the following :—Dundalk, Newry, Lurgan, Lisburn, Ballymena, Sligo and Armagh.

Enteric Fever.—There was only one death from enteric fever registered in the city of Belfast, there were 3 in Cork, and one in each of the following Urban Districts :—Londonderry, Galway, Newry, Kilkenny and Tralee.

There was one death from pyrexia (origin uncertain) returned for Belfast.

Diarrhoeal Diseases.—Of the total deaths (50) from diarrhoeal diseases 29 belonged to Belfast.

Cerebro-spinal Fever.—The deaths registered from cerebro-spinal fever or *cerebro-spinal meningitis* for Belfast, which numbered 6, 6 and 12 in the three preceding quarters, declined to 5 in the period under notice.

Phthisis.—The death-rate from phthisis for the 22 towns in the aggregate was 2·7 per 1,000 of the population; for the Dublin Registration Area it was 2·6 per 1,000, for Belfast County Borough 2·6 per 1,000, and for the Urban Districts collectively (exclusive of Belfast and Dublin Registration Area), it was 2·9 per 1,000, exclusive of deaths in public institutions of persons admitted from without the respective areas.

* Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, *pyrexia* (origin uncertain), enteric fever, and diarrhoeal diseases.

TABLE IV.—Births and Deaths Registered during the Quarter (13 weeks) ending Saturday, 3rd July, 1909, in the Dublin Registration Area, and in each of the undermentioned Twenty-one Urban Districts (exclusive of Deaths in Public Institutions of persons admitted from other localities), with the number of Deaths from some of the principal causes: also the number of Uncertified Deaths.

| REGISTRATION—QUARTER (13 WEEKS) ENDING SATURDAY, 3RD JULY, 1909. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

WEEK ENDING SATURDAY, 10TH JULY, 1909.

[No. 27.]

*General Register Office, Charlemont House,
Dublin, 12th July, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 15·6 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 14·0 | 4·7 | 18·7 | 18·7 | 14·0 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·4 per 1,000, the rates varying from 0·0 in twelve of the districts to 7·8 in Galway, the 9 deaths from all causes for that district including 2 from diarrhœal diseases. Among the 103 deaths from all causes for Belfast are 8 from whooping-cough, one from enteric fever, 4 from diarrhœal diseases, and one from *cerebro-spinal meningitis*. Of the 36 deaths from all causes for Cork 2 are from scarlet fever, 3 from whooping-cough, and one from diarrhœa. One of the 12 deaths from all causes for Londonderry is from whooping-cough. Among the 4 deaths from all causes for Limerick is one from enteric fever. Included in the 4 deaths from all causes for Lurgan is one from diphtheria. One of the 3 deaths from all causes for Ballymena is from measles; and the one death recorded for Armagh is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 184—99 boys and 85 girls—and the deaths to 122—69 males and 53 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 16·0 in every 1,000 of the population; omitting the deaths (numbering 3) of persons admitted into public institutions from localities outside the Area, the rate was 15·6 per 1,000. During the twenty-seven weeks ending with Saturday last, the death-rate averaged 24·2, and was 1·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the deaths from all causes were 2 from diphtheria and 2 from *diarrhoea*. The only death from diphtheria in the three preceding weeks was registered during the week ending the 3rd July. Deaths from diarrhoeal diseases in each of the three preceding weeks were 3, 3, and 6.

The deaths from pneumonia (all forms) include one death from lobar-pneumonia, 3 deaths from broncho-pneumonia, and 7 deaths from *pneumonia* (not defined).

Tuberculous disease caused the deaths of 29 persons; this figure includes 19 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, and 7 deaths from other forms of the disease. In the three preceding weeks, deaths from all forms of tuberculous disease numbered 25, 45, and 26, respectively.

There were 2 deaths from carcinoma, and one death from cancer (undefined).

Two infants, born prematurely, succumbed.

Diseases of the brain and nervous system caused 10 deaths, including 4 deaths from *convulsions* (one infant under one month, 2 between one month and one year, and one aged 4 years).

Eighteen deaths were attributed to diseases of the heart and blood vessels and 11 to bronchitis.

Of 2 deaths assigned to accident or negligence, one was of a child aged 7 years by drowning.

In no instance was the cause of death "uncertified."

Thirty-three of the persons whose deaths were registered during the week were under 5 years of age (22 being infants under one year, of whom 6 were under one month old) and 32 were aged 60 years and upwards, including 16 persons aged 70 and upwards, of whom 3 were octogenarians, and one (a male) was stated to have been aged 90 years.

Fifty-two of the deaths registered during the week occurred in hospitals and other public institutions; of this number 15 took place in the North Dublin Union Workhouse, and 15 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 15·6 per 1,000; the rate in the City was 16·3 (North City Districts, 15·6; South, 17·1) and in the Suburbs, 13·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 0·4 per 1,000 inhabitants, the rate for the City being 0·5 (0·7 in the North City Districts, and 0·3 in the South), and for the Suburbs, 0·0 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (9) are equal to an annual rate of 15·9 per 1,000. There were 2 deaths from tuberculous disease and one accidental death.

No. 1 North City District, West (Summer-hill).—The deaths (14) are equal to an annual rate of 18·5 per 1,000, and include one death each from broncho-pneumonia and *pneumonia* (not defined), 4 deaths from tuberculous disease, and 2 deaths from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (12) are equivalent to an annual rate of 20·6 per 1,000. Among them are one death from *diarrhoea*, one from *pneumonia* (not defined), one from *phthisis*, and one from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (8) represent an annual rate of 12·6 per 1,000. *Diarrhoea*, lobar pneumonia, and bronchitis each caused one death.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumecondra, part of, 4·5; and Finglas and Glasnevin, part of, 6·9. Of the 2 deaths recorded for Clontarf and Howth, No. 1, part of, one was from tuberculous phthisis and one from bronchitis; and the only death recorded for Coolock and Drumecondra, part of, was one from *phthisis*.

No. 1 South City District (South Earl-street).—The deaths (17) represent an annual rate of 21·6 per 1,000, and include one death from diphtheria, 4 deaths from tuberculous disease, and 2 from bronchitis.

No. 2 South City District (Castle-street).—The deaths (4) are equal to an annual rate of 9·7 per 1,000. There were 2 deaths from *pneumonia* (not defined) and one death from *phthisis*.

No. 3 South City District (Peter-street).—The deaths (10) are equal to an annual rate of 12·2 per 1,000. Among them are 3 deaths from *pneumonia* (not defined) and 4 from tuberculous disease.

No. 4 South City District (Grand Canal-street).—The deaths (17) are equivalent to an annual rate of 25·0 per 1,000. Two deaths were caused by broncho-pneumonia, 5 by tuberculous disease, and 3 by bronchitis.

New Kilmainham District.—The only death recorded for this district, equivalent to an annual rate of 5·8 per 1,000, was one from tuberculous phthisis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 12·8; Pembroke, 12·8; Blackrock, 6·0; and Kingstown, 17·8. Among the 9 deaths from all causes for Rathmines and Rathgar are one death from *phthisis* and 2 deaths from diseases of the respiratory system; the 7 deaths from all causes for Pembroke include 3 from tuberculous phthisis (*phthisis*) and one death from bronchitis; and of the 6 deaths from all causes for Kingstown there was one death from *pneumonia* (not defined).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 10th July, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of cerebro-spinal fever reported during week ended 19th June, and one case during week ended 26th June.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 10th July, 1909.

From this it appears that:—

Two cases of measles were admitted into hospital during the week, 5 were discharged and 29 cases remained under treatment at its close.

Fourteen cases of scarlet fever were admitted to hospital, 20 were discharged, and 68* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week:

Twelve cases of diphtheria were admitted to hospital, 6 were discharged, there were 2 deaths, and 30 patients remained under treatment at the close of the week.

Six cases of enteric fever were admitted to hospital during the week, 10 were discharged and 34 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 11 cases of pneumonia were admitted to hospital, 12 were discharged, there was one death, and 24 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·0) was equal to an average annual death-rate of 11·8 per 1,000 persons living the average rate for 8 principal towns of Scotland was 12·9 per 1,000, the rate for Glasgow being 12·2 and for Edinburgh 13·8.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 10th July. From this Report it appears that a total of 46 cases notified, 26 were scarlet fever, 9 phthisis, 4 diphtheria, 4 enteric fever, and 3 erysipelas. Among the 364 cases of infectious diseases in hospital at the close of the week were 141 cases of scarlet fever, 77 of measles, 46 of phthisis, 40 of whooping-cough, 31 of diphtheria, 7 of enteric fever, 4 of erysipelas, 3 of chicken-pox, and 2 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the week ending Saturday, 10th July, 1900, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS exclusive of Deaths in Public Institutions of Persons admitted from other Districts, with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 10th July, 1909:—

"The cool, changeable weather of this week was connected with the passage of three atmospheric depressions in succession from the Icelandic region eastwards to Scandinavia, or south-eastwards across the British Isles to Central Europe. The first of these disturbances was central near the Faeroe Islands at the beginning of the week. Its N.W. winds and clouded skies depressed temperature on Sunday, but the only considerable rainfall on that day was confined to the extreme S.E. of England and to Buxton, where a thunderstorm occurred. By Monday morning the second system was sighted off the N.W. of Ireland. It spread quickly eastwards and southwards, but its centre moved comparatively slowly from the S.W. of Ireland to the Faeroe until Tuesday morning, when it began to move so quickly south-eastwards that twenty-four hours later it had reached the Netherlands. Squalls from N.N.W., clouds, heavy showers, and low temperatures accompanied this large depression, in which the barometer fell below 29½ inches. After 7 a.m. of Wednesday the system changed its course travelling slowly north-eastwards to the Baltic. A brief spell of fine, bright weather followed, but on Friday the third depression of the week spread quickly south-eastwards from Iceland, causing a fresh break in the weather, first in Ireland, later in Great Britain also. On Saturday squalls from N.N.W., and drenching showers of rain and hail were experienced in Dublin, and at 3.10 p.m. thunder and lightning occurred. In this City the mean height of the barometer was 29.896 inches; the range being from 30.112 inches at 9 p.m. of Sunday (wind, W.N.W.) to 29.514 inches at 4 p.m. of Tuesday (wind, W.), and back again to a maximum for the week of 30.145 inches at 9 p.m. of Thursday (wind, N.W.). The corrected mean temperature was 57.9°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 57.5°. The screened thermometers rose to 67.5° on Thursday, having fallen to 50.3° on Wednesday. The prevalent wind was N.N.W. Rain fell on 4 days to the amount of .744 inch, .358 inch being recorded on Friday. From Monday high summer reigned in Lapland—Friday's maximum at Haparanda was 82° F."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.735 inches. The highest reading (29.990) was on Thursday at 9 p.m., wind N.W., and the lowest (29.424) on Tuesday at 9 a.m., wind N.W.

The mean temperature for the week was 56.7°, being 1.3° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Thursday, on which day the thermometer registered 66.8°, and was also lowest on that day, the mercury having fallen to 48.1°. The mean of the Dry Bulb for the week was 56.8° and of the Wet Bulb 55.7°. The mean humidity of the air was .93, complete saturation being represented by 1.0. The rainfall during the week measured 0.512 inch.

At Greenwich the mean temperature for the week was 58.5°, the maximum 74.0°, and the minimum 46.1°; at Glasgow the maximum was 68.2°, the minimum 47.0°, and the mean 57.0°; and at Edinburgh the maximum was 69.5°, the minimum 47.9°, and the mean 56.2°. The rainfall at Greenwich measured 0.99 in.; at Glasgow 0.57 in.; and at Edinburgh, 1.21 ins.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 17TH JULY, 1909.

[No. 28.]

General Register Office, Charlemont House,
Dublin, 19th July, 1909.

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 13·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·1 per 1,000, the rates varying from 0·0 in seventeen of the districts to 4·5 in Lisburn, the 2 deaths from all causes for that district including one from measles. Among the 83 deaths from all causes for Belfast are 2 from whooping-cough, one from enteric fever, 5 from diarrhoeal diseases, and one from cerebro-spinal fever. Of the 21 deaths from all causes for Cork 2 are from whooping-cough; and 2 deaths from whooping-cough are also included in the 9 deaths from all causes registered for Waterford.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 179—84 boys and 95 girls—and the deaths to 136—63 males and 73 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 17·8 in every 1,000 of the population; omitting the deaths (numbering 7) of persons admitted into public institutions from localities outside the Area, the rate was 16·9 per 1,000. During the twenty-eight weeks ending with Saturday last, the death-rate averaged 24·0, and was 1·6 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths included 2 from measles, 3 from diphtheria, 2 from enteric fever, 5 from diarrhoeal diseases and one death from influenza. In each of the three preceding weeks, deaths from measles were 0, 2, and 0 deaths from diphtheria were 0, one and 2; deaths from enteric fever were 0, 0, and 0; deaths from diarrhoeal diseases were 3, 6, and 2; and deaths from influenza were 0, 4, and 0.

Lobar-pneumonia and broncho-pneumonia each caused one death, and there were 5 deaths from *pneumonia* (not defined).

The deaths (23) from all forms of tuberculous disease include 14 from tuberculous phthisis (*phthisis*), 3 from tuberculous meningitis, one from tuberculous peritonitis, and 5 deaths from other forms of the disease. Deaths from all forms of tuberculous disease in the three preceding weeks were 45, 26, and 29, respectively.

There were 5 deaths from carcinoma, and 4 from cancer (undefined).

Premature birth was the registered cause of death of 4 infants.

Of 13 deaths attributed to diseases of the brain and nervous system 6 were from *convulsions*, of the latter figure 2 were infants under one month, 2 were between the ages of one month and one year, and 2 were between the ages of one year and 5 years.

Diseases of the heart and blood vessels caused 28 deaths and bronchitis caused 8 deaths.

Four deaths were assigned to accidental causes, of these one was by burning and 2 were by drowning.

In 2 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the death of one infant under one year of age and the death of one person aged 64 years.

Forty-four of the persons whose deaths were registered during the week were under 5 years of age (24 being infants under one year, of whom 14 were under one month old) and 35 were aged 60 years and upwards, including 22 persons aged 70 and upwards, of whom 8 were octogenarians, and 2 (females) were stated to have been aged 90 and 91 years respectively.

Sixty of the deaths registered during the week occurred in hospitals and other public institutions; of this number 8 took place in the North Dublin Union Workhouse and 15 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 16·9 per 1,000; the rate in the City was 18·7 (North City Districts, 20·9; South, 16·4) and in the Suburbs, 10·8.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·4 per 1,000 inhabitants, the rate for the City being 1·9 (3·0 in the North City Districts, and 0·7 in the South), and for the Suburbs, 0·0 per 1,000.

No. 1. *North City District, East* (Clarence-street, North).—The deaths (10) are equal to an annual rate of 17·6 per 1,000 and include one death from measles, one death from influenza, 2 deaths from epidemic enteritis, and 2 deaths from diseases of the respiratory system.

No. 1. *North City District, West* (Summer-hill).—The deaths (15) are equal to an annual rate of 19·8 per 1,000. Measles and enteric fever each caused one death, and there were 4 deaths from tuberculous phthisis (*phthisis*).

No. 2. *North City District* (Lisburn-street).—The deaths (9) are equivalent to an annual rate of 15·4 per 1,000. The deaths included one from diphtheria, 2 from diarrhoeal diseases, and one death from *phthisis*.

No. 3. *North City District* (Benburb-street).—The deaths (17) represent an annual rate of 26·7 per 1,000. There was one death from epidemic diarrhoea, there were 3 deaths from pneumonia (all forms), 2 deaths from tuberculous disease, one death from bronchitis, and one death by drowning.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 13·6; and Finglas and Glasnevin, part of, 48·0. Of the 3 deaths from all causes for Coolock and Drumcondra, part of, one was from *phthisis*; and of the 7 deaths from all causes for Finglas and Glasnevin, part of one was from *pneumonia* (not defined), 2 were from tuberculous disease, and one from bronchitis.

No. 1. *South City District* (South Earl-street).—The deaths (15) represent an annual rate of 19·1 per 1,000. The deaths included two from tuberculous disease, 2 from diseases of the respiratory system, and one death by burns.

No. 2. *South City District* (Castle-street).—The deaths (6) are equal to an annual rate of 14·5 per 1,000. Tuberculous *phthisis* and bronchitis each caused one death.

No. 3. *South City District* (Peter-street).—The deaths (14) are equal to an annual rate of 17·1 per 1,000. Diphtheria caused 2 deaths, there was one death from *pneumonia* (not defined), and one death from bronchitis.

No. 4. *South City District* (Grand Canal-street).—The deaths (10) are equivalent to an annual rate of 14·7 per 1,000. Tuberculous disease caused 3 deaths; there was one death from bronchitis and one death by drowning.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000. There was not one death from either of the principal epidemic diseases or from tuberculous disease registered.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 8·6; Pembroke, 14·6; Blackrock, 0·0; and Kingstown, 14·8. There was no death from any of the principal epidemic diseases tabulated for these districts. Of the 6 deaths from all causes for Rathmines and Rathgar 2 were from tuberculous disease, one from bronchitis, and one from accidental violence. Among the 8 deaths from all causes for Pembroke 3 were from tuberculous disease, and of the 5 deaths from all causes for Kingstown one was from *pneumonia* (not defined), and one from *phthisis*.

* See Columns 10-18 of Table II.

NOTE—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 17th July, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Not including one case of cerebro-spinal fever reported during week ended 26th June.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 17th July, 1909.

From this it appears that:—

Five cases of measles were admitted into hospital during the week, 11 were discharged and 23 cases remained under treatment at its close.

Twenty-four cases of scarlet fever were admitted to hospital, 10 were discharged, and 82* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Seven cases of diphtheria were admitted to hospital, 6 were discharged, there were 3 deaths, and 28 patients remained under treatment at the close of the week.

Five cases of enteric fever were admitted to hospital during the week, 11 were discharged, there was one death, and 27 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 13 cases of pneumonia were admitted to hospital, 8 were discharged, and 29 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 10·6) was equal to an average annual death-rate of 11·5 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12·5 per 1,000, the rate for Glasgow being 11·4 and for Edinburgh 12·8.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 17th July. From this Report it appears that of a total of 63 cases notified, 40 were scarlet fever, 10 phthisis, 9 diphtheria, 2 enteric fever, one cerebro-spinal fever, and one erysipelas. Among the 380 cases of infectious diseases in hospital at the close of the week were 168 cases of scarlet fever, 78 of measles, 47 of phthisis, 40 of whooping-cough, 31 of diphtheria, 9 of enteric fever, 3 of erysipelas, and 3 of cerebro-spinal fever.

* See note (*) at foot of Table XII

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 17th July, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 17th July, 1909:—

"The record is again one of changeable, cloudy and rather showery weather. At first the winds were northerly as in past weeks; but after Monday the prevalent direction was westerly. On the day named the Atlantic anti-cyclone took up a position which stretched from the Azores to the Bay of Biscay, and on and after Tuesday it spread still further eastwards across Central Europe to the Black Sea. At the same time a series of atmospheric depressions passed eastwards from Iceland over the Norwegian Sea to Scandinavia and Northern Russia. These were the physical conditions which determined the unsettled weather of the greater part of the week, with its clouded skies, brave west winds, and frequent showers. Sunday was cloudy to line, with sunny intervals towards evening. A solar halo at 9 a.m. of Monday heralded the approach of a disturbance from the Icelandic region. It remained central over Iceland until Wednesday morning when it travelled eastwards to the Faeroe Islands. Its secondaries passed directly across the United Kingdom and caused local thunder-showers in many districts. At 3 p.m. of Wednesday a heavy shower fell in Dublin and at 5 p.m. there was a partial drenching shower which yielded 130 inch in the rain-gauge. The next two days were dull and squally. On Friday morning a V-shaped 'secondary' passed over Scotland, causing a general rainfall throughout Great Britain. Saturday showed a decided improvement although the amount of cloud was still large, and the duration of bright sunshine was short. In Dublin the mean height of the barometer was 30.026 inches, pressure ranging between 30.138 inches at 9 a.m. of Monday (wind, W.N.W.) and 29.815 inches at 9 a.m. of Friday (wind, W.S.W.). The corrected mean temperature was 59.8°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 59.6°. The screened thermometers fell to 47.1° on Monday and rose to 68.4° on Tuesday. Westerly winds (between N.W. and S.W.) prevailed. Rain fell on 4 days to the amount of .269 inch, 153 inch being recorded on Wednesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·866 inches. The highest reading (29·985) was on Monday at 9 a.m., wind W., and the lowest (29·648) on Friday at 9 a.m., wind W.S.W.

The mean temperature for the week was 59·5°, being 0·6° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Tuesday, on which day the thermometer registered 68·3°, and was lowest on Monday, the mercury having fallen to 43·2°. The mean of the Dry Bulb for the week was 59·2° and of the Wet Bulb 57·0°. The mean humidity of the air was '86, complete saturation being represented by 1·0. The rainfall during the week measured 0·086 inch.

At Greenwich the mean temperature for the week was 60·0°, the maximum 76·5°, and the minimum 49·6°; at Glasgow the maximum was 66·7°, the minimum 42·0°, and the mean 57·6°; and at Edinburgh the maximum was 67·1°, the minimum 46·5°, and the mean 57·0°. The rainfall at Greenwich measured 0·71 in.; at Glasgow 0·34 in.; and at Edinburgh, 0·11 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 24TH JULY, 1909.

[No. 29.]

*General Register Office, Charlemont House,
Dublin, 26th July, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 14·5 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 13·7 | 13·7 | 9·3 | 14·0 | 15·2 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·0 per 1,000, the rates varying from 0·0 in eighteen of the districts to 4·5 in Lisburn, the 7 deaths from all causes for that district including one from measles. Among the 113 deaths from all causes for Belfast are 3 from whooping-cough, 3 from enteric fever, and 3 from diarrhoeal diseases; and of the 25 deaths from all causes for Cork one is from scarlet fever and one from diarrhoea.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 216—112 boys and 104 girls—and the deaths to 115—62 males and 53 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 15·1 in every 1,000 of the population; omitting the deaths (numbering 5) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 14·4 per 1,000. During the twenty-nine weeks ending with Saturday last, the death-rate averaged 23·7, and was 1·7 below the mean rate for the corresponding portions of the ten years 1899-1908.

There were included among the total deaths (115) registered 2 from whooping-cough, one death from diphtheria, 2 deaths from enteric fever, and 4 from diarrhoeal diseases; there were also registered one death from enteritis and 4 deaths from *gastro-enteritis*, the former and three of the latter being deaths of infants under one year of age. In the three preceding weeks, deaths from whooping-cough were 4, 0, and 0; deaths from diphtheria were one, 2, and 3; deaths from enteric fever were 0, 0, and 2; and deaths from diarrhoeal diseases were 6, 2, and 5, respectively.

There were 3 deaths attributed to broncho-pneumonia and 3 to *pneumonia* (not defined).

All forms of tuberculous disease accounted for 29 deaths; this figure includes 23 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, and 3 deaths from other forms of the disease. In each of the three preceding weeks deaths from all forms of tuberculous disease were 26, 29, and 23.

There was one death from carcinoma, and to cancer, malignant disease, 3 deaths were attributed.

The death of one prematurely born infant was recorded.

Of 8 deaths from diseases of the brain and nervous system, 3 were of infants under one year of age from *convulsions*.

Fourteen deaths were from diseases of the heart and blood vessels, and there were 10 deaths from bronchitis.

The deaths from accidental violence numbered 6, and include one death by a street accident, one in building operations, and 2 deaths by drowning.

In 4 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 3 infants under one year old and the death of one person aged 64 years.

Forty of the persons whose deaths were registered during the week were under 5 years of age (25 being infants under one year, of whom 8 were under one month old) and 26 were aged 60 years and upwards, including 12 persons aged 70 and upwards, of whom 2 were octogenarians, and one (a male) was stated to have been aged 91 years.

Fifty-three of the deaths registered during the week occurred in hospitals and other public institutions; of this number 12 took place in the North Dublin Union Workhouse and 9 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 14·4 per 1,000; the rate in the City was 16·1 (North City Districts, 16·6; South, 15·7) and in the Suburbs, 8·6.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·2 per 1,000 inhabitants, the rate for the City being 1·5 (1·3 in the North City Districts, and 1·7 in the South), and for the Suburbs, 0·0 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (7) are equal to an annual rate of 12·3 per 1,000 and include 2 deaths from diarrhoeal diseases, one death from broncho-pneumonia, one death from *phthisis*, and one death from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (20) are equal to an annual rate of 26·4 per 1,000. The deaths included one from whooping-cough, 6 from tuberculous disease, 3 from bronchitis, and 2 accidental deaths.

No. 2 North City District (Lisburn-street).—The deaths (13) are equivalent to an annual rate of 22·3 per 1,000. Tuberculous disease caused 5 deaths, and there were 2 deaths from bronchitis.

No. 3 North City District (Benbur-street).—The deaths (8) represent an annual rate of 12·6 per 1,000. Among the deaths was one from *pneumonia* (not defined), and tuberculous phthisis caused 2 deaths.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 4·5 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 6·9. The one death registered for Coolock and Drumcondra, part of, was from *diarrhoea*.

No. 1 South City District (South Earl-street).—The deaths (10) represent an annual rate of 12·7 per 1,000. Among the deaths were one from broncho-pneumonia, 2 from tuberculous phthisis, and 2 from diseases of the respiratory system.

No. 2 South City District (Castle-street).—The deaths (4) are equal to an annual rate of 9·7 per 1,000. Enteric fever caused one death, and one accidental death was registered.

No. 3 South City District (Peter-street).—The deaths (14) are equal to an annual rate of 17·1 per 1,000. Diphtheria and enteric fever each caused one death: there was one death from *pneumonia* (not defined), and one death from *phthisis*; there were 3 deaths from bronchitis, and one accidental death.

No. 4 South City District (Grand Canal-street).—The deaths (16) are equivalent to an annual rate of 23·5 per 1,000. There were 5 deaths from tuberculous disease and one death by drowning.

New Kilmanham District.—The one death registered is equal to an annual rate of 5·8 per 1,000.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 7·1; Pembroke, 11·0; Blackrock, 6·0; and Kingstown, 8·9. There was no death from any of the principal epidemic

tuberculous disease and one was from accidental violence. Among the 6 deaths from all causes for Rathmines, 3 were from tuberculous phthisis. The one death for Blackrock was from *phthisis*; and of the 3 deaths for Kingstown, one was from tuberculous phthisis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.,—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 24th July, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 24th July, 1909.

From this it appears that:—

Four cases of measles were admitted into hospital during the week, 3 were discharged and 24 cases remained under treatment at its close.

Twenty-two cases of scarlet fever were admitted to hospital, 15 were discharged, and 89* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Five cases of diphtheria were admitted to hospital, 9 were discharged, and 24 patients remained under treatment at the close of the week.

Nine cases of enteric fever were admitted to hospital during the week, 2 were discharged, there was one death, and 33 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 5 cases of pneumonia were admitted to hospital 10 were discharged, there was one death, and 23 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 10·0) was equal to an average annual death-rate of 10·6 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12·5 per 1,000, the rate for Glasgow being 12·4 and for Edinburgh 11·2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 24th July. From this Report it appears that of a total of 48 cases notified, 24 were scarlet fever, 13 phthisis, 6 diphtheria, 3 enteric fever, one puerperal fever, and one erysipelas. Among the 389 cases of infectious diseases in hospital at the close of the week were 159 cases of scarlet fever, 80 of measles, 47 of phthisis, 42 of whooping-cough, 31 of diphtheria, 12 of enteric fever, 4 of erysipelas, 2 of cerebro-spinal fever, and one of puerperal fever.

* See note (*) at foot of Table XII.

† Permanently notifiable in Dublin City from 22nd July, 1909.

‡ Choleraic Diarrhoea made notifiable in Rathmines and Rathgar Urban District for 3 months from 22nd July, 1909

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 24th July, 1969, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS exclusive of Deaths in Public Institutions or Persons admitted from other Districts, with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths : also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(a) According to the Census of 1891, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1893. (b) Formerly described as "Simple Continued Fever." (c) Exclusive of Pneumonia. (d) Exclusive of 5 deaths of persons (including one under 1 year old and 2 at 60 years or upwards), admitted to hospital from localities outside the Area. (e) If having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Markree for Sligo, and those at Roche's Point for Cork and Queenstown. (f) Observations at Ordnance Survey Office, Phoenix Park. (g) Observations by Sir John Moore taken at Fitzwilliam.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 24th July, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 24th July, 1909:—

"A period of 'brave west winds,' changeable and at times showery. On Monday morning the barometer was as low as 29.09 inches at Haparanda on the Gulf of Bothnia, but as high as 30.42 inches at Valentia in Kerry. Sunday had been cloudy with drizzle at first, but fine, warm and summerlike in the afternoon. On Monday the weather was still fine and warm, though windy in the forenoon. By Tuesday morning a new atmospheric depression had reached the S.W. coast of Iceland. Thence it travelled eastwards, being centred to the northward of the Shetland Isles on Wednesday morning. At that time it was causing showers in Ireland and steady rain in many parts of England and Wales. On Thursday morning another deeper and larger depression was 'sighted' off the N.W. of Ireland, travelling in a north-easterly direction. Twenty-four hours later this disturbance was centred between Scotland and the Faeröe, with the barometer down to 29.11 inches at Stornoway in the Hebrides, whereas it was as high as 30.09 inches at Biarritz and 30.38 inches at Horta, in the Azores. Strong, squally S.W. to W. winds swept across the British Isles, and heavy showers of rain and, in places, hail were reported from most districts. At this time temperature, which had been fairly high earlier in the week, fell away considerably and the weather resembled April rather than July. The northern depression subsequently travelled south-eastwards. On Saturday after a stormy forenoon, conditions improved, the afternoon turning out fine, bright and dry, till 6 p.m. when light rain fell. In Dublin the mean height of the barometer was 29.863 inches, pressure ranging between 30.305 inches at 9 a.m. of Monday (wind, W.N.W.) and 29.501 inches at 9 p.m. of Friday (wind, W.). The corrected mean temperature was 59.7°, the mean dry bulb temperature at 9 a.m. and 9 p.m. being 58.3°. On Monday the screened thermometers fell to 50.0°, on Tuesday they rose to 70.1°. Westerly winds prevailed and were strong. The rainfall was .867 inch on 5 days, .199 inch being recorded on Friday, but .532 inch on Saturday, most of this large quantity falling on the morning of Sunday, the 25th inst."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.702 inches. The highest reading (30.150) was on Monday at 9 p.m., air calm, and the lowest (29.332) on Friday at 9 p.m., wind S.W.

The mean temperature for the week was 59.4°, being 1.4° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Tuesday, on which day the thermometer registered 70.6°, and was lowest on Monday, the mercury having fallen to 46.9°. The mean of the Dry Bulb for the week was 57.4° and of the Wet Bulb 53.8°. The mean humidity of the air was .78, complete saturation being represented by 1.0. The rainfall during the week measured 0.685 inch.

At Greenwich the mean temperature for the week was 61.9°, the maximum 77.7°, and the minimum 48.8°; at Glasgow the maximum was 64.8°, the minimum 48.7°, and the mean 56.8°; and at Edinburgh the maximum was 64.1°, the minimum 47.3°, and the mean 56.5°. The rainfall at Greenwich measured 0.15 in.; at Glasgow 0.77 in.; and at Edinburgh, 0.21 in.

The information in this paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 31st JULY, 1909.

[No. 30.]

*General Register Office, Charlemont House,
Dublin, 3rd August, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 15·4 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 18·7 | 9·3 | 14·0 | 23·3 | 16·3 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·7 per 1,000, the rates varying from 0·0 in thirteen of the districts to 6·0 in Londonderry, the 19 deaths from all causes for that district including five from diarrhœal diseases. Among the 97 deaths from all causes for Belfast are 3 from whooping-cough, and 5 from diarrhœal diseases. Of the 21 deaths from all causes for Cork 3 are from whooping-cough and one from diarrhœa. One of the 4 deaths from all causes for Lisburn is from diphtheria; and of the 4 deaths from all causes for Tralee one is from enteric fever.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 248—118 boys and 130 girls—and the deaths to 143—77 males and 66 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 18·7 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 17·4 per 1,000. During the thirty weeks, ending with Saturday last, the death-rate averaged 23·5, and was 1·8 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths (143) included 4 from measles, one from scarlet fever, 4 from whooping-cough, one from diphtheria, and 5 deaths from diarrhoeal diseases. The 4 deaths from measles included one death from measles, diphtheria. In each of the three preceding weeks, deaths from measles were 0, 2, and 0; deaths from scarlet fever were 0, 0, and 0; deaths from whooping-cough were 0, 0, and 2; deaths from diphtheria were 2, 3 and one; and deaths from diarrhoeal diseases were 2, 5, and 4.

There were 7 deaths from broncho-pneumonia and 5 from *pneumonia* (not defined).

Deaths from all forms of tuberculous disease, which were 29, 23, and 29 in each of the three preceding weeks, declined to 23 in the week under notice; the latter figure includes 14 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis, and 6 deaths from other forms of the disease.

Three deaths were attributed to carcinoma, and 6 to cancer, malignant disease (undefined).

The deaths of 5 infants were due to prematurity.

Of 9 deaths from diseases of the brain and nervous system, 3 were of infants under one year of age from *convulsions*.

There were 25 deaths from diseases of the heart and blood vessels, and 7 deaths from bronchitis.

Included in 5 deaths which were assigned to accidental causes were 3 by falls and one was by drowning.

In one instance the cause of death was "uncertified," there having been no medical attendant during the last illness, this case was that of a person aged 61 years.

Forty-six of the persons whose deaths were registered during the week were under 5 years of age (29 being infants under one year, of whom 6 were under one month old) and 32 were aged 60 years and upwards, including 16 persons aged 70 and upwards, of whom 5 were octogenarians.

Fifty-six of the deaths registered during the week occurred in hospitals and other public institutions; of this number 9 took place in the North Dublin Union Workhouse and 16 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 17·4 per 1,000; the rate in the City was 18·7 (North City Districts, 17·9; South, 19·5) and in the Suburbs, 13·1.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2·0 per 1,000 inhabitants, the rate for the City being 2·0 (2·0 in the North City Districts, and 2·1 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (7) are equal to an annual rate of 12·3 per 1,000 and include one death from *diarrhoea*, 2 deaths from respiratory diseases, and 2 accidental deaths.

No. 1 North City District, West (Summer-hill).—The deaths (12) are equal to an annual rate of 15·8 per 1,000. Measles, whooping-cough, and *diarrhoea*, each caused one death: there was one death from *phthisis*, one death from bronchitis, and there were 2 accidental deaths.

No. 2 North City District (Lisburn-street).—The deaths (8) are equivalent to an annual rate of 13·7 per 1,000. Among the deaths were, one from epidemic *diarrhoea* and 2 from tuberculous disease.

No. 3 North City District (Benburb-street).—The deaths (11) represent an annual rate of 22·0 per 1,000. The deaths include one from whooping-cough, one from broncho-pneumonia, 2 from *pneumonia* (not defined), 3 from tuberculous phthisis (*phthisis*), and 2 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part, of 19·6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 36·3; and Finglas and Glasnevin, part of, 20·6. Among the 3 deaths from all causes for Finglas and Glasnevin, part of, one is from broncho-pneumonia and one from tuberculous disease.

No. 1 South City District (South Earl-street).—The deaths (12) represent an annual rate of 15·3 per 1,000. Of the deaths one was from tuberculous phthisis and one from tuberculous meningitis.

No. 2 South City District (Castle-street).—The deaths (11) are equal to an annual rate of 26·7 per 1,000. Diphtheria caused one death, there was one death from broncho-pneumonia, one death from tuberculous phthisis, and one death from bronchitis.

No. 3 South City District (Peter-street).—The deaths (16) are equal to an annual rate of 19·5 per 1,000. Broncho-pneumonia and *pneumonia* (not defined), each caused one death; there were 4 deaths from tuberculous disease, one death from bronchitis, and one accidental death.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000. Measles, scarlet fever, and epidemic *diarrhoea*, each caused one death: there was one death from *pneumonia* (not defined), tuberculous phthisis caused 2 deaths, and there were 2 deaths from diseases of the respiratory system.

New Kilmacnam District.—The deaths (3) are equal to an annual rate of 17·4 per 1,000. Two of the deaths registered were from whooping-cough and one was from tuberculous meningitis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar 14·3; Pembroke, 12·8; Blackrock, 17·9; and Kingstown, 8·9. The deaths from the principal epidemic diseases tabulated for these districts include 2 from measles for Pembroke and one from *diarrhoea* for Blackrock. Of the 10 deaths from all causes for Rathmines, 2 are from broncho-pneumonia, 2 from tuberculous disease, and one death from asthma; of the 3 deaths from all causes for Blackrock one is from broncho-pneumonia; and the 3 deaths from all causes for Kingstown include 2 from tuberculous disease.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.: the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 31st July, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 31st July, 1909.

From this it appears that:—

Four cases of measles were admitted into hospital during the week, 3 were discharged and 25 cases remained under treatment at its close.

Fifteen cases of scarlet fever were admitted to hospital, 12 were discharged, and 92* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Thirteen cases of diphtheria were admitted to hospital, 8 were discharged, there was one death, and 28 patients remained under treatment at the close of the week.

Eight cases of enteric fever were admitted to hospital during the week, 5 were discharged, and 36 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 5 cases of pneumonia were admitted to hospital, 8 were discharged, there were two deaths, and 18 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 10·3) was equal to an average annual death-rate of 10·8 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 11·8 per 1,000, the rate for Glasgow being 10·5 and for Edinburgh 13·7.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 31st July. From this Report it appears that of a total of 59 cases notified, 31 were scarlet fever, 14 phthisis, 7 erysipelas, 4 diphtheria, one enteric fever, one puerperal fever, and one cerebro-spinal fever. Among the 394 cases of infectious diseases in hospital at the close of the week were 164 cases of scarlet fever, 75 of measles, 50 of phthisis, 43 of whooping-cough, 32 of diphtheria, 9 of enteric fever, 8 of erysipelas, 4 of cerebro-spinal fever, and 2 of puerperal fever.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the week ending Saturday, 31st July, 1902, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS exclusive of Deaths in Public Institutions of Persons admitted from other Districts, with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 31st July, 1909:—

"The broken weather which set in on June 18 reached a climax in this, the closing week of July. Rain fell daily in Dublin, and on Wednesday the thermometer fell to 45° in the screen and to 41° on the ground. On Sunday and Tuesday temperature failed to reach 59° in the screen. On Sunday morning a well-marked depression, in which the barometer was as low as 29·3 inches, lay over St. George's Channel, the circulation round the baric minimum being particularly pronounced. The day was dull, wet, and cold in Dublin, but the weather improved towards evening, as the disturbance travelled away to the northeastward. A fine bright morning on Monday was followed by heavy showers in the afternoon. On Tuesday morning a new depression was found off the southern coast of Ireland and this system subsequently passed quickly across Wales and England, reaching Holland on Wednesday morning. It caused very heavy rain over South Wales and the greater part of England, more than an inch being recorded at several stations and 38 inch in St. James's Park, London. In the wake of the depression the weather improved for a time in England, but a very extensive though shallow low-pressure system subsequently passed eastwards across Scotland and kept the weather in that country and in Ireland in an unsettled, cloudy and rainy state. On Saturday morning another secondary cyclonic system passed eastwards over the north of Ireland, causing dull, wet weather till the afternoon. Mention should be made of the very low night temperatures which occurred on Monday and Tuesday in Scotland and Ireland (42° at Wick and Birr Castle, 45° in Dublin). The mean height of the barometer in Dublin was 29·764 inches, the range being from 29·315 inches at 9 a.m. of Sunday (wind, N.) to 30·010 inches at 9 p.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 56°·4, the mean dry bulb reading being 56°·5. On Wednesday the screened thermometers fell to 45°·1, on Friday they rose to 67°·3. The prevailing wind was W.N.W. Rain fell daily to the amount of 1·202 inches, 283 inch being measured on Tuesday, 259 inch on Thursday, and 250 inch on Friday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.608 inches. The highest reading (29.860) was on Saturday at 9 p.m., air calm, and the lowest (29.154) on Sunday at 9 a.m., wind N.N.W.

The mean temperature for the week was 55.6°, being 3.6° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Friday, on which day the thermometer registered 67.5°, and was lowest on Wednesday, the mercury having fallen to 42.0°. The mean of the Dry Bulb for the week was 56.6° and of the Wet Bulb 54.0°. The mean humidity of the air was .85, complete saturation being represented by 1.0. The rainfall during the week measured 1.267 inches.

At Greenwich the mean temperature for the week was 59.9°, the maximum 76.0°, and the minimum 47.3°; at Glasgow the maximum was 69.0°, the minimum 44.7°, and the mean 56.5°; and at Edinburgh the maximum was 64.1°, the minimum 45.7°, and the mean 54.7°. The rainfall at Greenwich measured 1.31 ins.; at Glasgow 1.38 ins.; and at Edinburgh, 1.67 ins.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

VOL. XLVI.]

WEEK ENDING SATURDAY, 7TH AUGUST, 1909.

[No. 31.]

*General Register Office, Charlemont House,
Dublin, 9th August, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 15·8 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 93 | 140 | 233 | 93 | 140 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·7 per 1,000, the rates varying from 0·0 in fifteen of the districts to 5·8 in Waterford, the 7 deaths from all causes for that district including 3 from diarrhoeal diseases. Among the 108 deaths from all causes for Belfast are 5 from whooping-cough, and 7 from diarrhoeal diseases. Of the 38 deaths from all causes for Cork 3 are from whooping-cough and 2 from diarrhoeal diseases. Among the 12 deaths from all causes for Londonderry are 2 deaths from diarrhoeal diseases, and included in the 11 deaths from all causes for Limerick are one from each of scarlet fever, whooping-cough, and diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 196—96 boys and 100 girls—and the deaths to 123—62 males and 61 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 16·1 in every 1,000 of the population; omitting the deaths (numbering 7) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 15·2 per 1,000. During the thirty-one weeks, ending with Saturday last, the death-rate averaged 23·3, and was 1·9 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the deaths from all causes, measles, scarlet fever, diphtheria, and enteric fever, each caused one death; there were 4 deaths from whooping-cough, 5 deaths from diarrhoeal diseases, and one death from influenza. In each of the three preceding weeks, deaths from measles were 2, 0, and 4; deaths from scarlet fever were 0, 0, and one; deaths from whooping-cough were 0, 2, and 4; deaths from diphtheria were 3, one, and one; deaths from enteric fever were 2, 2, and 0; deaths from diarrhoeal diseases were 5, 4, and 5; and deaths from influenza were one, 0, and 0.

Three deaths were attributed to broncho-pneumonia and 6 to *pneumonia* (not defined).

The deaths from all forms of tuberculous disease, were 20 in number, and included 15 deaths from tuberculous phthisis (*phthisis*), 2 deaths from tuberculous meningitis, and 3 deaths from other forms of the disease.

Deaths from all forms of tuberculous disease in the 3 preceding weeks were 23, 29, and 23 respectively.

There were 2 deaths from carcinoma, and 8 from cancer (undefined).

Prematurity caused the deaths of 4 infants under one month of age.

Included in the 5 deaths from diseases of the brain and nervous system, were 3 deaths from *convulsions*, one being under one month old, one over one month and under one year, and one aged 4 years, respectively.

Diseases of the heart and blood vessels accounted for 22 deaths and there were 5 deaths from bronchitis.

There were 5 deaths attributed to accident or negligence; of these, 2 were by vehicles and horses, and one was by suffocation in bed of an infant.

In four instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 2 children under 5 years of age (including one infant under one year old) and the death of one person aged 71 years.

Forty-one of the persons whose deaths were registered during the week were under 5 years of age (27 being infants under one year, of whom 8 were under one month old) and 29 were aged 60 years and upwards, including 15 persons aged 70 and upwards, of whom 2 were octogenarians.

Forty-seven of the deaths registered during the week occurred in hospitals and other public institutions; of this number 10 took place in the North Dublin Union Workhouse and 8 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 15·2 per 1,000; the rate in the City was 16·0 (North City Districts, 14·9; South, 17·1) and in the Suburbs, 12·5.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·6 per 1,000 inhabitants, the rate for the City being 1·9 (1·3 in the North City Districts, and 2·4 in the South), and for the Suburbs, 0·6 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (8) are equal to an annual rate of 14·1 per 1,000 and include one death each from *diphtheria*, *broncho-pneumonia*, *pneumonia* (not defined), *phthisis*, and *bronchitis*.

No. 1 North City District, West (Summer-hill).—The deaths (5) are equal to an annual rate of 6·6 per 1,000. Of the deaths one was caused by enteric fever, and one by tuberculous phthisis.

No. 2 North City District (Lisburn-street).—The deaths (11) are equivalent to an annual rate of 18·9 per 1,000. Measles and influenza each caused one death; there were 2 deaths from *pneumonia* (not defined), and one accidental death.

No. 3 North City District (Benburb-street).—The deaths (8) represent an annual rate of 12·6 per 1,000. The deaths include one from tuberculous phthisis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 29·4 per 1,000 inhabitants; Cooleck and Drumecondra, part of, 31·8; and Finglas and Glasnevin, part of, 20·6. Of the 3 deaths from all causes for Clontarf and Howth, No. 1, part of, one was from whooping-cough and one was from *pneumonia* (not defined). Two deaths from broncho-pneumonia and one accidental death are included in the 7 deaths from all causes for Cooleck and Drumecondra, part of, and of the 3 deaths from all causes for Finglas and Glasnevin, part of, one is from tuberculous meningitis.

No. 1 South City District (South Earl-street).—The deaths (14) represent an annual rate of 17·8 per 1,000. There was one death from epidemic diarrhoea; there was one death from *pneumonia* (not defined); there were 3 deaths from tuberculous disease, and one death from bronchitis.

No. 2 South City District (Castle-street).—The deaths (5) are equal to an annual rate of 12·1 per 1,000. Of the 5 deaths registered one was caused by tuberculous phthisis.

No. 3 South City District (Peter-street).—The deaths (15) are equal to an annual rate of 18·3 per 1,000. Diphtheria and epidemic diarrhoea each caused one death; there were 3 deaths from tuberculous phthisis (*phthisis*), and 2 deaths from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000. Whooping-cough caused 3 deaths, there was one death from epidemic diarrhoea, also one death from *pneumonia* (not defined), there were 4 deaths from tuberculous phthisis (*phthisis*), and 3 deaths assigned to accident or negligence.

New Kilmainham District.—The one death (from tuberculous phthisis) tabulated for this District is equal to an annual rate of 5·8 per 1,000.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 12·8; Pembroke, 14·6; Blackrock, 23·8; and Kingstown, 30. The only death from any of the principal epidemic diseases tabulated for these districts was one from epidemic diarrhoea for Pembroke. Of the 9 deaths from all causes for Rathmines, 3 are from tuberculous disease, and one is from pleurisy. Of the 8 deaths from all causes for Pembroke, one is from *phthisis* and one from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District: Mr. Manly, Executive Sanitary Officer for Pembroke Urban District: Mr. Heron, Executive Sanitary Officer for Blackrock Urban District: by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District: and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 7th August, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 7th August, 1909.

From this it appears that:—

Two cases of measles were admitted into hospital during the week, 4 were discharged and 23 cases remained under treatment at its close.

Thirteen cases of scarlet fever were admitted to hospital, 12 were discharged, there was one death, and 92* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week:

Five cases of diphtheria were admitted to hospital, 7 were discharged, there was one death, and 25 patients remained under treatment at the close of the week.

Seven cases of enteric fever were admitted to hospital during the week, 3 were discharged, there was one death, and 39 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 2 cases of pneumonia were admitted to hospital, 4 were discharged, there was one death, and 15 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 10·1) was equal to an average annual death-rate of 10·5 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12·0 per 1,000, the rate for Glasgow being 11·9 and for Edinburgh 12·5.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 7th August. From this Report it appears that of a total of 59 cases notified, 29 were scarlet fever, 17 phthisis, 7 diphtheria, 4 erysipelas, one enteric fever, and one puerperal fever. Among the 389 cases of infectious diseases in hospital at the close of the week were 176 cases of scarlet fever, 65 of measles, 48 of phthisis, 37 of whooping-cough, 34 of diphtheria, 8 of erysipelas, 7 of enteric fever, 3 of cerebro-spinal fever, 2 of puerperal fever, and one of chicken-pox.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 17th August, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

the Registration Area as then constituted.
"Simple Continued Fever."

REGISTRATION OF DEATHS, WEEK ENDING SATURDAY, 7TH AUGUST, 1909.

CAUSES OF DEATH.

AGES.

Total Number of Deaths.

Population in 1901.

Annual Death Rate per 1,000 of Population.

Under 5 Years.

5 and under 10.

10 and under 20.

20 and under 40.

40 and under 60.

60 and under 80.

80 and upwards.

Typhus.

Whooping-cough.

Diphtheria.

Typhoid Fever.

Scarlet Fever.

Measles.

Small-pox.

Enteric Fever.

Diarrhoeal Diseases.

Total Cholera, 10-18.

Pneumonia.

Tuberculous Disease.

Phthisis.

Other Forms.

Cancer, Malignant.

Convulsions.

Diseases of the Respiratory System (exclusive of Pneumonia).

Violence (Accidental).

Homicidal and Suicidal.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.F.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 7th August, 1909:—

"With the coming of August came the belated summer of 1909. The cool, cloudy, showery period which succeeded the sunny weather of late spring at the summer solstice, passed with July, and after a cloudy, damp forenoon on Sunday, the weather of this week was, in Dublin, all that could be desired. In England, owing to the development of a shallow atmospheric depression on Sunday, considerable quantities of rain fell on that day, as much as 1.21 inches being measured at Spurn Head, Yorkshire, at 7 a.m. of Monday. As this disturbance travelled eastwards to Germany the weather improved, but Monday night was quite sharp in Great Britain, the screened thermometers sinking to 37° at Wick and Nairn, 42° at Blackpool, 43° at Rhyl, 44° at Leith, 45° at Buxton and Southport, 46° at Bath and Oxford, and 47° even in London. A large anticyclone spread in over Ireland and Scotland from the Atlantic on Monday. It reached England next day, when its S.W. winds brought a decided increase of temperature. At this time a baric depression of considerable energy and depth appeared off the S.W. of Iceland, the barometer falling below 29.2 inches all over that island on Wednesday morning. This disturbance gradually passed within the Arctic Circle, affecting the weather of the British Isles only along their extreme north-western shores, and then only through the medium of a shallow secondary depression which crossed Ulster on Thursday morning—Malin Head received .38 inch of rain and Blacksod Point .75 inch. In Dublin the hot sunshine of the three last days of the period was tempered by an easterly sea breeze which came in along the east coast each day. In this City the mean height of the barometer was 30.174 inches, the range being between 30.027 inches at 9 a.m. of Sunday (wind, N.N.W.) and 30.252 inches at 9 p.m. of Monday (wind, E.). The corrected mean temperature was 59.7°, which was also the mean dry bulb reading at 9 a.m. and 9 p.m. On Monday the screened thermometers fell to 48.1°, on Wednesday they rose to 71.6°. The wind was generally light and variable, chiefly S.W. A little drizzle fell on Sunday forenoon and a slight shower at 9.30 a.m. of Wednesday, but only .004 inch was caught in the gauge."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.002 inches. The highest reading (30.092) was on Monday at 9 p.m., air calm, and the lowest (29.866) on Sunday at 9 a.m., air calm.

The mean temperature for the week was 58.6°, being 0.6° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Wednesday, on which day the thermometer registered 73.8°, and was lowest on Friday, the mercury having fallen to 40.3°. The mean of the Dry Bulb for the week was 58.8° and of the Wet Bulb 55.7°. The mean humidity of the air was .82, complete saturation being represented by 1.0. There was no rainfall during the week.

At Greenwich the mean temperature for the week was 60.8°, the maximum 79.9°, and the minimum 46.9°; at Glasgow the maximum was 73.5°, the minimum 41.8°, and the mean 59.4°; and at Edinburgh the maximum was 73.2°, the minimum 45.7°, and the mean 58.4°. The rainfall at Greenwich measured 0.26 in.; at Glasgow 0.62 in.; and at Edinburgh, 0.35 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

WEEK ENDING SATURDAY, 14TH AUGUST, 1909.

[No. 32.]

*General Register Office, Charlemont House,
Dublin, 16th August, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 14·0 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 14·0 | 23·3 | 9·3 | 4·7 | 12·8 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·3 per 1,000, the rates varying from 0·0 in thirteen of the districts to 9·7 in Waterford, the 12 deaths from all causes for that district including 2 from whooping-cough and 3 from diarrhœal diseases. Among the 105 deaths from all causes for Belfast are one from diphtheria and 3 from diarrhœal diseases. Of the 23 deaths from all causes for Cork one is from enteric fever and one from diarrhœa. One death from diphtheria is included among the 8 deaths from all causes for Limerick, and one death from diphtheria is also included among the 10 deaths from all causes for Galway. Included in the 5 deaths from all causes for Lurgan is one from scarlet fever, and of the 3 deaths from all causes for Armagh one is from diphtheria.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 292—143 boys and 149 girls—and the deaths to 113—56 males and 57 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 14·8 in every 1,000 of the population : omitting the deaths (numbering 10) of persons admitted into public institutions from localities outside the Area, the rate was 13·5 per 1,000. During the thirty-two weeks, ending with Saturday last, the death-rate averaged 23·0, and was 2·0 below the mean rate for the corresponding portions of the ten years 1899-1908.

The 113 deaths from all causes include one death from measles, 2 deaths from whooping-cough, and 9 deaths from diarrhoeal diseases. In the three preceding weeks, deaths from measles were 0, 4 and one ; deaths from whooping-cough were 2, 4 and 4 ; and deaths from diarrhoeal diseases were 4, 5, and 5.

There was one death each from lobar pneumonia and *pneumonia* (not defined).

Deaths from all forms of tuberculous disease, which in the three preceding weeks numbered 29, 23 and 20 deaths, respectively, fell to 19 last week, the latter including 9 deaths from tuberculous phthisis (*phthisis*), 5 from tuberculous meningitis, one from tuberculous peritonitis, and 4 from other forms of tuberculous disease.

There were 5 deaths from carcinoma, and one death from cancer (undefined).

The deaths of 2 infants, prematurely born, were registered.

To diseases of the brain and nervous system 9 deaths were ascribed, 4 being those of infants under one year of age from *convulsions*.

Diseases of the heart and blood vessels caused the deaths of 19 persons, and there were 9 deaths from bronchitis.

Of 3 accidental deaths, 2 were caused by drowning and one (that of a child aged 1½ years) was caused by opium poisoning.

In four instances the cause of death was "uncertified," there having been no medical attendant during the last illness ; these cases include the deaths of 3 infants under one year of age.

Forty-one of the persons whose deaths were registered during the week were under 5 years of age (33 being infants under one year, of whom 11 were under one month old) and 27 were aged 60 years and upwards, including 14 persons aged 70 and upwards, of whom 3 were octogenarians, and one (a female) was stated to have been aged 94 years.

Fifty of the deaths registered during the week occurred in hospitals and other public institutions ; of this number 10 took place in the North Dublin Union Workhouse and 8 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 13·5 per 1,000 ; the rate in the City was 15·0 (North City Districts, 15·3 ; South, 14·6) and in the Suburbs, 8·6.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·6 per 1,000 inhabitants, the rate for the City being 2·0 (1·3 in the North City Districts, and 2·8 in the South), and for the Suburbs, 0·0.

No. 1 North City District, East (Clarence-street, North).—The deaths (10) are equal to an annual rate of 17·6 per 1,000. Among them are one death from *diarrhoea*, 2 deaths from tuberculous disease, and one death from accidental drowning.

No. 1 North City District, West (Summer-hill).—The deaths (12) are equal to an annual rate of 15·8 per 1,000, and include one death from *diarrhoea* and 2 deaths from tuberculous disease.

No. 2 North City District (Lisburn-street).—The deaths (6) are equivalent to an annual rate of 10·3 per 1,000. One of the deaths was caused by bronchitis.

No. 3 North City District (Benburb-street).—The deaths (10) represent an annual rate of 15·7 per 1,000. There were 2 deaths from epidemic diarrhoea and one death each from tuberculous phthisis and bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are :—Clontarf and Howth, No. 1, part, of 9·8 per 1,000 inhabitants ; Coolock and Drumcondra, part, of 22·7 ; and Finglas and Glasnevin, part, of 13·7. The only death recorded for Clontarf and Howth, No. 1, part, was one from tuberculous phthisis ; and of the 5 deaths from all causes for Coolock and Drumcondra, part, one was from lobar-pneumonia.

No. 1 South City District (South Earl-street).—The deaths (14) represent an annual rate of 17·8 per 1,000, and include 2 deaths from diarrhoeal diseases, 3 from tuberculous disease, 2 from bronchitis, and one from accidental drowning.

No. 2 South City District (Castle-street).—The deaths (3) are equal to an annual rate of 7·3 per 1,000. There were 2 deaths from diseases of the heart and blood vessels.

No. 3 South City District (Peter-street).—The deaths (15) are equal to an annual rate of 18·3 per 1,000. Among them are one death from whooping-cough, 2 deaths from epidemic diarrhoea, 4 from tuberculous disease, and 4 from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (9) are equivalent to an annual rate of 13·2 per 1,000. There was one death each from measles, whooping-cough, and epidemic diarrhoea.

New Kilmainham District.—The only death recorded (equivalent to an annual rate of 5·8 per 1,000) was one caused by accidental poisoning.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are :—Rathmines and Rathgar, 71 ; Pembroke, 7·3 ; Blackrock, 6·0 ; and Kingstown, 14·8. There was no death from any of the principal epidemic diseases tabulated for these districts. Among the 4 deaths from all causes for Pembroke are one from tuberculous meningitis and one from bronchitis ; and the only death recorded for Blackrock was one from tuberculous meningitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 14th August, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 14th August, 1909.

From this it appears that:—

Three cases of measles were admitted into hospital during the week, 4 were discharged and 22 cases remained under treatment at its close.

Six cases of scarlet fever were admitted to hospital, 14 were discharged, and 84* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Seven cases of diphtheria were admitted to hospital, 5 were discharged, and 27 patients remained under treatment at the close of the week.

Five cases of enteric fever were admitted to hospital during the week, 8 were discharged, and 36 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 5 cases of pneumonia were admitted to hospital, 3 were discharged, there was one death, and 16 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11·3) was equal to an average annual death-rate of 11·5 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12·6 per 1,000, the rate for Glasgow being 12·9 and for Edinburgh 11·3.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 14th August. From this Report it appears that of a total of 42 cases notified, 20 were scarlet fever, 12 phthisis, 5 diphtheria, and 5 erysipelas. Among the 380 cases of infectious diseases in hospital at the close of the week were 176 cases of scarlet fever, 64 of measles, 48 of phthisis, 32 of whooping-cough, 32 of diphtheria, 6 of erysipelas, 5 of enteric fever, 2 of cerebro-spinal fever, 2 of puerperal fever, and one of chicken-pox.

* See note (2) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 14th August, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 14th August, 1909:—

"The weather during the week under notice was a continuance of that described as prevailing under the favourable conditions of the preceding week. The early days of the week had all that could be desired in the matter of bright, warm weather, and though rain fell in showers on Friday and at such intervals as to record two 'rain days,' the end of the week was by no means unpleasant and temperature continued warm and summerlike. Over Ireland the barometer remained high and changes were, for the most part, gradual. On Thursday a well-marked depression had appeared between Iceland and Scandinavia, following in the wake of a small depression which had passed eastwards. On Friday the depression had deepened, but moved away across the North of Scandinavia, causing the weather to become more settled again. As before, the hot sunshine was generally tempered by an easterly sea-breeze along the coast, but on Thursday the thermometers in the screen rose to 77°—the highest reading since July 17, 1907, when the value was 77°3". The warm weather produced fogs along the coast and a dense sea-fog which occurred on Tuesday night caused a pleasure steamer returning from Bray to Dublin to miss her course and strike on the rocks of Dalkey Island. In Dublin the mean height of the barometer was 30·199 inches, the range being between 30·113 inches at 9 p.m. of Sunday (wind, N.E.) and 30·330 inches at 9 a.m. of Wednesday (wind, W.). The corrected mean temperature was 63·7°, the mean dry bulb reading being 62·3°. On Monday the screened thermometers fell to 51·7°, on Thursday they rose to 77·1°. The prevailing winds were N.E. and W. Rain fell on two days to the amount of 0·108 inch, '052 inch being measured on Thursday and '056 inch on Friday. Fog occurred on Thursday in the early morning."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30.026 inches. The highest reading (30.138) was on Wednesday at 9 a.m., wind W.S.W., and the lowest (29.942) on Sunday at 9 a.m., air calm.

The mean temperature for the week was 62.4°, being 47° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 77.0°, and was lowest on Monday, the mercury having fallen to 43.5°. The mean of the Dry Bulb for the week was 61.4° and of the Wet Bulb 58.4°. The mean humidity of the air was .83, complete saturation being represented by 1.0. The rainfall during the week measured 0.105 inch.

At Greenwich the mean temperature for the week was 66.9°, the maximum 86.2°, and the minimum 52.0°; at Glasgow the maximum was 75.5°, the minimum 50.0°, and the mean 61.6°; and at Edinburgh the maximum was 74.9°, the minimum 49.6°, and the mean 61.8°. The rainfall at Glasgow measured 0.43 in.; and at Edinburgh, 0.11 in. There was no rainfall recorded at Greenwich.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

VOL. XLVI.]

WEEK ENDING SATURDAY, 21ST AUGUST, 1909.

[No. 33.]

*General Register Office, Charlemont House,
Dublin, 23rd August, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 16·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 23·3 | 9·3 | 4·7 | 9·3 | 11·7 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 2·3 per 1,000, the rates varying from 0·0 in seventeen of the districts to 7·8 in Waterford, the 10 deaths from all causes for that district including 4 from diarrhoeal diseases. Among the 116 deaths from all causes for Belfast are 4 from whooping-cough and 17 from diarrhoeal diseases, and of the 16 deaths from all causes for Londonderry 2 are from diarrhoeal diseases.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 205—94 boys and 111 girls—and the deaths to 157—78 males and 79 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 20·6 in every 1,000 of the population; omitting the deaths (numbering 6) of persons admitted into public institutions from localities outside the Area, the rate was 19·8 per 1,000. During the thirty-three weeks, ending with Saturday last, the death-rate averaged 22·9, and was 2·1 below the mean rate for the corresponding portions of the ten years 1899-1908.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

Among the deaths registered are one death each from scarlet fever, whooping-cough, and diphtheria, and 20 deaths from diarrhoeal diseases—in addition the deaths of 9 infants under one year of age were attributed to enteritis; there was one death each from influenza and cerebro-spinal meningitis.

In the three preceding weeks, deaths from scarlet fever were one, one and 0; deaths from whooping-cough were 4, 4 and 2; deaths from diphtheria were one, one and 0; deaths from diarrhoeal diseases were 5, 5, and 9; deaths from influenza were 0, one and 0; and deaths from cerebro-spinal fever, 0, 0 and 0 respectively.

There were two deaths from lobar pneumonia, one death from broncho-pneumonia, and 5 deaths from pneumonia (not defined).

All forms of tuberculous disease caused 25 deaths, including 18 from tuberculous phthisis (phthisis), 5 from tuberculous meningitis and 2 from other forms of the disease. In the three preceding weeks the number of deaths from all forms of tuberculous disease was 23, 20 and 19, respectively.

Six deaths were caused by carcinoma, one death by sarcoma, and 3 deaths by cancer, malignant disease (undefined).

The deaths of 3 infants were ascribed to prematurity.

There were 9 deaths from diseases of the brain and nervous system, including the death of one infant under one year of age from convulsions.

The deaths of 20 persons were caused by diseases of the heart and blood vessels, and 6 deaths were caused by bronchitis.

Three deaths were ascribed to accident or negligence, one being that of an infant under one month old caused by overlaying.

In three instances the cause of death was "uncertified," there having been no medical attendance during the last illness; these deaths were all of infants under one year of age.

Fifty-eight of the persons whose deaths were registered during the week were under 5 years of age (45 being infants under one year, of whom 8 were under one month old) and 40 were aged 60 years and upwards, including 26 persons aged 70 and upwards, of whom 5 were octogenarians, and one (a male) was stated to have been aged 90 years.

Sixty-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 18 took place in the North Dublin Union Workhouse, 15 in the South Dublin Union Workhouse, and 4 in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 19·8 per 1,000; the rate in the City was 20·4 (North City Districts, 20·9; South, 19·8) and in the Suburbs, 17·7.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 3·0 per 1,000 inhabitants, the rate for the City being 3·4 (3·7 in the North City Districts, and 3·1 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (5) are equal to an annual rate of 8·8 per 1,000. There was one death from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (18) are equal to an annual rate of 23·7 per 1,000. Three deaths were caused by diarrhoeal diseases, one by broncho-pneumonia, 4 by tuberculous phthisis (phthisis), and one by bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (17) are equivalent to an annual rate of 29·2 per 1,000, and include one death from whooping-cough, 2 from diarrhoea, one from influenza, one from pneumonia (not defined), 4 from phthisis, and 2 from diseases of the respiratory system.

No. 3 North City District (Benburb-street).—The deaths (19) represent an annual rate of 29·8 per 1,000. There were 5 deaths from epidemic diarrhoea, one from pneumonia (not defined), 5 from tuberculous phthisis (phthisis), one from bronchitis, and one accidental death.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 13·6; and Finglas and Glasnevin, part of, 0·0. The only death recorded for Clontarf and Howth, No. 1, part of, is one from lobar pneumonia; and of the 3 deaths from all causes for Coolock and Drumcondra, part of, one is from tuberculous phthisis.

No. 1 South City District (South Earl-street).—The deaths (12) represent an annual rate of 15·3 per 1,000. Among them are one from diphtheria, one from epidemic diarrhoea, and one from pneumonia (not defined).

No. 2 South City District (Castle-street).—The deaths (6) are equal to an annual rate of 14·5 per 1,000. Four deaths were caused by tuberculous disease, and one death of an infant by accidental overlaying.

No. 3 South City District (Peter-street).—The deaths (19) are equal to an annual rate of 23·2 per 1,000. There were 2 deaths from epidemic diarrhoea, one death from pneumonia (not defined), and 4 deaths from tuberculous disease.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000, and include one death from diarrhoea, 2 deaths from tuberculous disease, 2 deaths from bronchitis, and one accidental death.

New Kilmainham District.—The deaths (6) are equal to an annual rate of 34·8 per 1,000. Epidemic diarrhoea caused 4 deaths.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 20·0; Pembroke, 11·0; Blackrock, 17·9; and Kingstown, 23·7. The deaths from the principal epidemic diseases tabulated for these districts, include one from scarlet fever, and one from epidemic diarrhoea for Rathmines and Rathgar, cerebro-spinal meningitis, and one from lobar pneumonia; and the 8 deaths from all causes for Blackrock are one from from tuberculous phthisis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.: the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 21st August, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 21st August, 1909.

From this it appears that:—

Two cases of measles were admitted into hospital during the week, 2 were discharged and 22 cases remained under treatment at its close.

Ten cases of scarlet fever were admitted to hospital, 4 were discharged, and 90* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Six cases of diphtheria were admitted to hospital, 8 were discharged, there was one death, and 24 patients remained under treatment at the close of the week.

Two cases of enteric fever were admitted to hospital during the week, 8 were discharged, and 30 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 6 cases of pneumonia were admitted to hospital, 6 were discharged, there was one death, and 15 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11.1) was equal to an average annual death-rate of 11.8 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12.0 per 1,000, the rate for Glasgow being 11.6 and for Edinburgh 11.6.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 21st August. From this Report it appears that of a total of 47 cases notified, 27 were scarlet fever, 13 phthisis, 3 enteric fever, 2 diphtheria, and 2 erysipelas. Among the 390 cases of infectious diseases in hospital at the close of the week were 184 cases of scarlet fever, 66 of measles, 48 of phthisis, 34 of whooping-cough, 28 of diphtheria, 7 of enteric fever, 6 of erysipelas, 2 of cerebro-spinal fever, 2 of puerperal fever, and one of chicken-pox.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the Week ending Saturday, 21st August, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths: also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909.
(b) Formerly described as "Simple Continued Fever."
(c) Exclusive of Pneumonia.
(d) Exclusive of 6 deaths of persons (including one under 1 year old and one at 71 years), admitted to hospital from localities outside the Area.
(e) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Markree for Sligo, and those at Roche's Point for Cork and Queenstown.
(f) Observations at Ordnance Survey Office, Phoenix Park.
(g) Observations by Sir John Moore taken at Fitzwilliam-square.
(h) Observations at the General Post Office, Dublin.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 21st August, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 21st August, 1909:—

"The cool changeable weather of this week was connected with the passage Eastwards of a large shallow 'V-shaped' depression followed by a well-defined system of barometric depression. The former caused unsettled weather on Monday but soon passed across the North Sea to Denmark and Scandinavia. On Tuesday morning the barometer was low off the S. W. coast of Ireland and an East wind heralded the approach of the second depression from the West. By Wednesday the system had become well defined, having its centre over the English Channel. Next day the depression had moved off North-eastwards and the barometer rose rapidly for a time. During the week pressure had remained low over Iceland, while over France the pressure was generally high. The movement Eastwards of a depression off Iceland caused gradients to steepen and on Friday morning pressure ranged from 30.3 inches over the centre of France to 29.1 inches in the Faeroe Islands. The week began and ended its career with self-assertion, for thunderstorms occurred on both the first and last days. On Sunday vivid forked lightning played around. Peals of thunder were heard and during the storm a heavy shower fell. At 2 p.m. of Saturday the second thunderstorm broke over the city. The lightning was accompanied by loud peals of thunder, heavy rain and hail, which caused streets and roads to become for a time flooded. In Dublin the mean height of the barometer was 29.765 inches, the range being from 29.984 inches at 9 a.m. of Sunday (wind, N.E.), to 29.601 inches at 9 a.m. of Wednesday (wind, W.N.W.). The corrected mean pressure was 60.2°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 58.7°. The screened thermometers rose to 75.0° on Sunday and fell to 49.5° on Tuesday. The prevalent wind was, W. Rain fell on 6 days to the amount of 0.683 inch, .367 inch being measured on Saturday. Hail fell on Saturday. A solar halo was observed on Tuesday and thunder and lightning occurred on Sunday and Saturday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.596 inches. The highest reading (29.822) was on Sunday at 9 a.m., air calm, and the lowest (29.422) on Wednesday at 9 a.m., wind W.N.W.

The mean temperature for the week was 58.8°, being 0.9° above the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Sunday, on which day the thermometer registered 77.8°, and was lowest on Tuesday, the mercury having fallen to 41.4°. The mean of the Dry Bulb for the week was 57.7° and of the Wet Bulb 53.9°. The mean humidity of the air was .78, complete saturation being represented by 1.0. The rainfall during the week measured 0.785 inch.

At Greenwich the mean temperature for the week was 63.3°, the maximum 85.7°, and the minimum 50.7°; at Glasgow the maximum was 75.0°, the minimum 47.4°, and the mean 58.9°; and at Edinburgh the maximum was 74.6°, the minimum 48.7°, and the mean 57.4°. The rainfall at Greenwich measured 0.82 in.; at Glasgow, 0.58 in.; and at Edinburgh, 0.37 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155.3 feet.)

VOL. XLVI.]

WEEK ENDING SATURDAY, 28TH AUGUST, 1909.

[No. 34.

*General Register Office, Charlemont House,
Dublin, 30th August, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 18·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Kilkenny, | 98 | 147 | | 147 | 98 | Wexford, | 93 | 47 | 93 | 47 | 70 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 4·3 per 1,000, the rates varying from 0·0 in thirteen of the districts to 6·8 in Cork, the 27 deaths from all causes for that district including 4 from whooping-cough, one from enteric fever and 5 from diarrhoeal diseases. Among the 129 deaths from all causes for Belfast are one from scarlet fever, 4 from whooping-cough, and 28 from diarrhoeal diseases. Of the 15 deaths from all causes for Londonderry 4 are from diarrhoeal diseases. Included in the 12 deaths from all causes for Limerick are 2 from whooping-cough, one from enteric fever and one from diarrhoea, and among the 13 deaths from all causes for Waterford are 3 from diarrhoeal diseases.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 261—135 boys and 126 girls—and the deaths to 162—78 males and 84 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 21·2 in every 1,000 of the population; omitting the deaths (numbering 6) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-13 of Table II.

from localities outside the Area, the rate was 20·4 per 1,000. During the thirty-four weeks, ending with Saturday last, the death-rate averaged 22·9, and was 2·0 below the mean rate for the corresponding portions of the ten years 1899-1908.

Of the 162 deaths registered, there were 5 deaths from whooping-cough, one death each from diphtheria and enteric fever, and 30 deaths from diarrhoeal diseases. The deaths of 4 infants under one year of age from *gastro-enteritis* were recorded.

In the three preceding weeks, deaths from whooping-cough were 4, 2 and one; deaths from diphtheria were one, 0 and one; deaths from enteric fever were one, 0 and 0; and deaths from diarrhoeal diseases were 5, 9 and 20, respectively.

Tetanus caused 2 deaths.

To broncho-pneumonia one death was ascribed and to *pneumonia* (not defined) 2 deaths.

There were 34 deaths from all forms of tuberculous disease, including 19 from tuberculous phthisis (*phthisis*), 7 from tuberculous meningitis and 8 from other forms of the disease. In the three preceding weeks deaths from all forms of tuberculous disease numbered 20, 19 and 25, respectively.

Four deaths were caused by carcinoma and 3 by cancer, malignant disease (undefined).

The deaths of 3 infants, prematurely born, were registered.

The deaths of 7 persons were attributed to diseases of the brain and nervous system, including 3 deaths of infants under one year of age from *convulsions*.

There were 15 deaths from diseases of the heart and blood vessels, and 11 deaths from bronchitis.

One of the 2 deaths attributed to accident was caused by a motor car.

In four instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 2 children under 5 years of age (including one infant under one year of age) and the deaths of two persons aged 60 years or upwards.

Seventy-six of the persons whose deaths were registered during the week were under 5 years of age (55 being infants under one year, of whom 17 were under one month old) and 30 were aged 60 years and upwards, including 15 persons aged 70 and upwards, of whom 2 were octogenarians.

Sixty of the deaths registered during the week occurred in hospitals and other public institutions; of this number 5 took place in the North Dublin Union Workhouse and 16 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the districts from which the deceased were admitted, and the annual death-rate for each district calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 20·4 per 1,000; the rate in the City was 21·2 (North City Districts, 19·6; South, 23·0) and in the Suburbs, 17·7.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 4·8 per 1,000 inhabitants, the rate for the City being 4·8 (5·0 in the North City Districts, and 4·5 in the South), and for the Suburbs, 5·1 per 1,000.

No. 1 North City District, East (Clarendon-street, North).—The deaths (6) are equal to an annual rate of 10·6 per 1,000, and include one death each from epidemic diarrhoea and tuberculous phthisis.

No. 1 North City District, West (Summer-hill).—The deaths (20) are equal to an annual rate of 26·4 per 1,000. There were 2 deaths from whooping-cough, 3 from diarrhoea, 4 from tuberculous disease, one from bronchitis, and one accidental death.

No. 2 North City District (Lisburn-street).—The deaths (18) are equivalent to an annual rate of 30·9 per 1,000. One death from whooping-cough, 4 deaths from diarrhoeal diseases, 4 from tuberculous disease, and 2 deaths from bronchitis were recorded.

No. 3 North City District (Benburb-street).—The deaths (5) represent an annual rate of 7·9 per 1,000. Whooping-cough, phthisis, and bronchitis each caused one death.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 49·0 per 1,000 inhabitants; Coolock and Drumcondra, part of, 22·7; and Finglas and Glasnevin, diarrhoea and 2 deaths from phthisis; and of the 5 deaths from all causes for Clontarf and Howth, No. 1, part of, include one death from epidemic from epidemic diarrhoea.

No. 1 South City District (South Earl-street).—The deaths (19) represent an annual rate of 24·2 per 1,000. Among them are one from diphtheria, 2 from diarrhoeal diseases, one from broncho-pneumonia, 3 from tuberculous disease, and 3 from bronchitis.

No. 2 South City District (Castle-street).—The deaths (12) are equal to an annual rate of 29·1 per 1,000, and include one death from epidemic diarrhoea, and 4 deaths from tuberculous disease.

No. 3 South City District (Peter-street).—The deaths (23) are equal to an annual rate of 28·1 per 1,000. There were 6 deaths from diarrhoeal diseases, 8 from tuberculous disease, and one death from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (10) are equivalent to an annual rate of 14·7 per 1,000. Of the deaths, 3 were caused by epidemic diarrhoea, one by *pneumonia* (not defined), and one by bronchitis.

New Kilmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 20·0; Pembroke, 18·3; Blackrock, 0·0; and Kingstown, 20·7. The deaths from the principal epidemic diseases tabulated for these districts, include 4 from diarrhoeal diseases for Rathmines and Rathgar; one from enteric fever and 2 the 14 deaths from all causes for Pembroke; and one from whooping-cough and one from diarrhoea for Kingstown. Among bronchitis; the 10 deaths from all causes for Rathmines and Rathgar are 3 deaths from tuberculous disease and one death from diseases of the respiratory system, and one accidental death; and of the 7 deaths from all causes for Kingstown, there were 3 deaths from tuberculous phthisis (*phthisis*).

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 28th August, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 28th August, 1909.

From this it appears that:—

One case of measles was admitted into hospital during the week, 5 were discharged and 18 cases remained under treatment at its close.

Eight cases of scarlet fever were admitted to hospital, 11 were discharged, and 87* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Thirteen cases of diphtheria were admitted to hospital, 4 were discharged, there was one death, and 32 patients remained under treatment at the close of the week.

Six cases of enteric fever were admitted to hospital during the week, 2 were discharged, there was one death, and 33 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 6 cases of pneumonia were admitted to hospital, 9 were discharged, there was one death, and 11 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·4) was equal to an average annual death-rate of 12·9 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12·7 per 1,000, the rate for Glasgow being 13·3 and for Edinburgh 10·4.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 28th August. From this Report it appears that of a total of 63 cases notified, 29 were scarlet fever, 17 phthisis, 12 diphtheria, 2 enteric fever, 2 erysipelas, and one cerebro-spinal fever. Among the 375 cases of infectious diseases in hospital at the close of the week were 173 cases of scarlet fever, 65 of measles, 43 of phthisis, 34 of whooping-cough, 32 of diphtheria, 8 of enteric fever 6 of erysipelas, 2 of chicken-pox, one of puerperal fever, and one of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 28th August, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 28th August, 1909:—

"The weather during the early part of this week may be described shortly as cool, cloudy and showery. The last days, however, were very fine, but temperature continued low for the time of year. Seven-eighths of the total rainfall recorded during the week was accounted for on Sunday: of the remainder, '041 inch was measured on Monday and '063 inch on Tuesday. At the beginning of the week the barometer was low and unsteady, and the mercury fell still further as a depression approached from the Atlantic. As the low-pressure system moved off, the barometer rose slowly and steadily until Saturday, when the development of a well-marked and large depression, with its centre near Iceland, caused the barometer to fall once more. Sunday was fair but cloudy. Some rain fell in the evening; the night was calm. Monday was again cloudy and showers fell both on this day and on the following day. Wednesday opened with an overcast sky, but the weather improved as the day advanced and the evening was fine. The remaining days of the week were bright and pleasant. In Dublin the mean height of the barometer was 29.896 inches, pressure ranging between 29.518 inches at 9 a.m. of Monday (wind, S.W.) and 30.236 inches at 9 p.m. of Friday (wind, W.). The corrected mean temperature was 57.4°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 57.2°. The screened thermometers fell to 47.9° on Sunday and rose to 67.1° on Saturday. Westerly winds (between N.W. and S.W.) prevailed. Rain fell on 4 days to the amount of '308 inch, '196 inch being recorded on Sunday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.728 inches. The highest reading (30.074) was on Friday at 9 p.m., air calm, and the lowest (29.360) on Monday at 9 a.m., wind S.S.W.

The mean temperature for the week was 56.2°, being 0.9° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 66.1°, and was lowest on Sunday, the mercury having fallen to 40.0°. The mean of the Dry Bulb for the week was 56.3° and of the Wet Bulb 54.0°. The mean humidity of the air was .85, complete saturation being represented by 1.0. The rainfall during the week measured 0.248 inch.

At Greenwich the mean temperature for the week was 58.1°, the maximum 72.1°, and the minimum 45.2°; at Glasgow the maximum was 65.0°, the minimum 39.4°, and the mean 55.4°; and at Edinburgh the maximum was 63.3°, the minimum 44.3°, and the mean 53.7°. The rainfall at Greenwich measured 0.70 in.; at Glasgow, 1.20 ins.; and at Edinburgh, 0.78 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 4TH SEPTEMBER, 1909.

[No. 35.]

*General Register Office, Charlemont House,
Dublin, 6th September, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 16·8 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, | 4·7 | 9·3 | 4·7 | 14·0 | 8·2 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 2·9 per 1,000, the rates varying from 0·0 in sixteen of the districts to 6·0 in Londonderry, the 13 deaths from all causes for that district including one from diphtheria and 4 from diarrhoeal diseases. Among the 119 deaths from all causes for Belfast are 2 from whooping-cough and 20 from diarrhoeal diseases. Of the 32 deaths from all causes for Cork 6 are from diarrhoeal diseases. Included in the 13 deaths from all causes for Limerick are one from whooping-cough and one from enteric fever, and among the 13 deaths from all causes for Waterford are one from whooping-cough and 2 from diarrhoeal diseases.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 208—107 boys and 101 girls—and the deaths to 149—63 males and 86 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 19·5 in every 1,000 of the population; omitting the deaths (numbering 4) of persons admitted into public institutions from localities outside the Area, the rate was 19·0 per 1,000. During the thirty-five weeks, ending with Saturday last, the death-rate averaged 22·8, and was 2·1 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths registered included 2 deaths from scarlet fever, 3 from diphtheria, one death from enteric fever, and 20 deaths from diarrhoeal diseases.

In the three preceding weeks, deaths from scarlet fever were 0, one and 0; deaths from diphtheria were 0, one and one; deaths from enteric fever were 0, 0 and one; and deaths from diarrhoeal diseases were 9, 20 and 30.

Lobar-pneumonia caused one death and *pneumonia* (not defined) caused 6 deaths.

Tuberculous disease (all forms) caused 24 deaths, including 18 deaths from tuberculous phthisis (*phthisis*), 2 from tuberculous meningitis, one death from tuberculous peritonitis, and 3 deaths from other forms of tuberculous disease. Deaths from all forms of tuberculous disease in the three preceding weeks numbered 19, 25 and 34, respectively.

There were 5 deaths from carcinoma and 3 deaths from cancer, malignant disease (undefined).

The deaths of 3 infants were ascribed to prematurity.

Diseases of the brain and nervous system caused 9 deaths, including the deaths of 2 children under 5 years of age from *convulsions*.

Seventeen deaths were caused by diseases of the heart and blood vessels, and 8 by bronchitis.

Of 7 deaths attributed to accident, 2 (one being that of a child aged 4 years) were caused by burns, 2 by drowning, and one (that of an infant under one year of age) by overlaying.

In 2 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the death of one infant under one year old.

Sixty-six of the persons whose deaths were registered during the week were under 5 years of age (45 being infants under one year, of whom 9 were under one month old) and 30 were aged 60 years and upwards, including 12 persons aged 70 and upwards, of whom 4 were octogenarians.

Sixty-one of the deaths registered during the week occurred in hospitals and other public institutions; of this number 5 took place in the North Dublin Union Workhouse and 19 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 19·0 per 1,000; the rate in the City was 20·6 (North City Districts, 16·9; South, 24·4) and in the Suburbs, 13·7.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 3·3 per 1,000 inhabitants, the rate for the City being 3·2 (2·7 in the North City Districts, and 3·8 in the South), and for the Suburbs, 3·4 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (10) are equal to an annual rate of 17·6 per 1,000. Scarlet fever, *pneumonia* (not defined) and tuberculous disease each caused one death.

No. 1 North City District, West (Summer-hill).—The deaths (14) are equal to an annual rate of 18·5 per 1,000. There were 2 deaths from diarrhoeal diseases, 5 from tuberculous phthisis (*phthisis*), and 2 from bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (14) are equivalent to an annual rate of 24·0 per 1,000, and include 2 deaths from diarrhoeal diseases, one death from lobar pneumonia, 3 deaths from tuberculous disease, and 2 accidental deaths.

No. 3 North City District (Benburb-street).—The deaths (9) represent an annual rate of 14·1 per 1,000. Among them are one death from scarlet fever and one death from epidemic diarrhoea.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumecondra, part of, 18·1 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 0·0. Of the 4 deaths from all causes for Coolock and Drumecondra, part of, there was one death each from diarrhoea and tuberculous disease.

No. 1 South City District (South Earl-street).—The deaths (12) represent an annual rate of 15·3 per 1,000. Diarrhoeal diseases caused 2 deaths and there was one death each from *phthisis* and bronchitis.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·8 per 1,000, and include one death from epidemic diarrhoea, 3 deaths from tuberculous disease, and one accidental death.

No. 3 South City District (Peter-street).—The deaths (29) are equal to an annual rate of 35·4 per 1,000. One death from diphtheria, 5 deaths from diarrhoeal diseases, 3 deaths from *pneumonia* (not defined), 4 deaths from tuberculous disease, one death from bronchitis, and 2 deaths from burns were recorded.

No. 4 South City District (Grand Canal-street).—The deaths (13) are equivalent to an annual rate of 19·1 per 1,000. Among them are one death from epidemic diarrhoea, one death from *pneumonia* (not defined), 4 deaths from tuberculous phthisis and 2 deaths from bronchitis.

New Kilmainham District.—The deaths (7) are equal to an annual rate of 40·6 per 1,000. Epidemic diarrhoea and tuberculous phthisis each caused one death.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 15·7; Pembroke, 14·6; Blackrock, 6·0; and Kingstown, 11·8. The deaths from the principal epidemic diseases tabulated for these districts, include one from diarrhoea for Rathmines and Rathgar; 2 from diphtheria and 2 from diarrhoeal diseases for Pembroke; and one death from epidemic diarrhoea for Kingstown. Among the 11 deaths from all causes for Rathmines and Rathgar is one death from *pneumonia* (not defined); the 8 deaths from all causes for Pembroke include one from bronchitis and one accidental death; the only death recorded for Blackrock is one from tuberculous phthisis; and the 4 deaths from all causes for Kingstown include one from bronchitis and one accidental death.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 4th September, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 4th September, 1909.

From this it appears that:—

Three cases of measles were admitted into hospital during the week, 7 were discharged and 14 cases remained under treatment at its close.

Nine cases of scarlet fever were admitted to hospital, 22 were discharged, there was one death, and 73* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Twelve cases of diphtheria were admitted to hospital, 4 were discharged, there was one death, and 39 patients remained under treatment at the close of the week.

Nine cases of enteric fever were admitted to hospital during the week, 11 were discharged, and 31 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 8 cases of pneumonia were admitted to hospital, 5 were discharged, there was one death, and 13 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·4) was equal to an average annual death-rate of 12·9 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 13·8 per 1,000, the rate for Glasgow being 14·0 and for Edinburgh 14·1.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 4th September. From this Report it appears that of a total of 61 cases notified, 31 were scarlet fever, 11 phthisis, 7 diphtheria, 5 enteric fever, 3 erysipelas, and one puerperal fever. Among the 369 cases of infectious diseases in hospital at the close of the week were 183 cases of scarlet fever, 54 of measles, 41 of phthisis, 35 of diphtheria, 26 of whooping-cough, 13 of enteric fever, 7 of erysipelas, 2 of chicken-pox, and one of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the Week ending Saturday, 4th September, 1909, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions of Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertained Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

(a) According to the Census of 1901, but in the cases of the Districts comprising the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909. (b) Formerly described as "Simple Continued Fever." (c) Exclusive of Pneumonia. (d) Exclusive of 4 deaths of persons (including one under 1 year old), admitted to hospital from localities outside the Area. (e) It having been found impracticable to obtain Meteorological Observations from some of the Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Donaghadee have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Marke for Sligo, and those at Roche's Point for Cork and Waterford. (f) Observations by Sir John Moore taken at Fitzwilliam-square. (g) Observations by Sir John Moore taken at Fitzwilliam-square.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 4th September, 1909, with the number of uncertified deaths; also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 4th September, 1909:—

"A period of westerly and northwesterly winds with weather changeable and at times dull and showery marked the passing of August and the coming of September. The morning of Sunday was overcast and rain fell during part of the day. The evening was fine, with a clearing sky. Monday in like manner passed from an overcast morning to a fine evening. At this time a large cyclonic disturbance covered Scandinavia, and its secondaries extended over the North Sea and most of the United Kingdom. Another large depression followed close in its wake, and northerly to northwesterly winds prevailed in the United Kingdom. The system was more marked on Wednesday, but finally moved northward, and the barometer rose at most stations as a large anticyclone extended from the Atlantic over the south of these Islands and the northern part of France. Gradients however were steep, and a further cyclonic system between Norway and Iceland and the passage eastwards of secondary depressions kept the weather in a changeable and unsettled condition during the rest of the week. In Dublin the mean height of the barometer was 29.994 inches, pressure ranging between 29.805 inches at 9 p.m. of Monday (wind, W.N.W.) and 30.187 inches at 9 a.m. of Friday (wind, W.). The corrected mean temperature was 54.99, the mean dry bulb temperature at 9 a.m. and 9 p.m. being 54.6°. On Monday the screened thermometers fell to 45.5°, on Friday they rose to 63.2°. West and northwest winds prevailed, and were generally moderate in force. Towards the end of the period, however, they were quite fresh at times. The rainfall was 0.426 inch on 4 days, 1.90 inch being recorded on Sunday and .097 inch on Wednesday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·830 inches. The highest reading (30·020) was on Friday at 9 a.m., wind W.S.W., and the lowest (29·643) on Monday at 9 p.m., wind W.N.W.

The mean temperature for the week was 53·7°, being 3·0° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Friday, on which day the thermometer registered 63·2°, and was lowest on Monday, the mercury having fallen to 41·0°. The mean of the Dry Bulb for the week was 53·9° and of the Wet Bulb 51·0°. The mean humidity of the air was ·82, complete saturation being represented by 1·0. The rainfall during the week measured 0·516 inch.

At Greenwich the mean temperature for the week was 54·5°, the maximum 71·7°, and the minimum 37·1°; at Glasgow the maximum was 61·3°, the minimum 35·8°, and the mean 53·3°; and at Edinburgh the maximum was 59·6°, the minimum 42·7°, and the mean 52·4°. The rainfall at Greenwich measured 0·30 in.; at Glasgow, 0·50 in.; and at Edinburgh, 0·23 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

TABLE XIII.—METEOROLOGICAL OBSERVATIONS taken at the ORDNANCE SURVEY OFFICE, PHOENIX PARK, DUBLIN. (Height above mean sea level 155·3 feet.)

Dublin, 13th September, 1909.*

TWENTY-TWO TOWN DISTRICTS

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 17·8 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 2·9 per 1,000, the rates varying from 0·0 in fourteen of the districts to 9·7 in Waterford, the 16 deaths from all causes for that district including one from whooping-cough and 4 from diarrhœal diseases. Among the 124 deaths from all causes for Belfast are 5 from whooping-cough, 2 from diphtheria, and 16 from diarrhœal diseases. Of the 39 deaths from all causes for Cork, one is from diphtheria, and 7 are from diarrhœal diseases, and included in the 15 deaths from all causes for Limerick are 2 from whooping-cough and one from diarrhœa.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 226—108 boys and 118 girls—and the deaths to 134—63 males and 71 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 17·5 in every 1,000 of the population; omitting the deaths (numbering 6) of persons admitted into public institutions from localities outside the Area, the rate was 16·8 per 1,000. During the thirty-six weeks, ending with Saturday last, the death-rate averaged 22·6, and was 2·2 below the mean rate for the corresponding portions of the ten years 1899-1908.

Of the 134 deaths registered, there were 2 deaths from measles, one death each from whooping-cough and diphtheria, 2 deaths from enteric fever, and 15 deaths from diarrhoeal diseases. In the three preceding weeks, deaths from measles were 0, 0 and 0; deaths from whooping-cough were one, 5 and 0; deaths from diphtheria were one, one and 3; deaths from enteric fever were 0, one and one; and deaths from diarrhoeal diseases were 20, 30 and 20.

Broncho-pneumonia caused one death and *pneumonia* (not defined) 5 deaths.

All forms of tuberculous disease, which in the three preceding weeks numbered 25, 34 and 24 deaths, respectively, fell to 21 in the period under notice, the latter including 20 deaths from tuberculous phthisis (*phthisis*) and one from tuberculous meningitis.

There were 5 deaths from carcinoma and 4 deaths from cancer, malignant disease (undefined).

The deaths of 6 infants prematurely born were recorded.

Three deaths were ascribed to diseases of the brain or nervous system.

To diseases of the heart and blood vessels 20 deaths were attributed, and to bronchitis 10 deaths.

There were 3 accidental deaths (including one of an infant caused by overlaying) and one suicidal death.

In 5 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the deaths of 3 infants under one year old and the deaths of 2 persons aged 60 years and upwards.

Thirty-eight of the persons whose deaths were registered during the week were under 5 years of age (30 being infants under one year, of whom 10 were under one month old) and 37 were aged 60 years and upwards, including 20 persons aged 70 and upwards, of whom 9 were octogenarians.

Fifty-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 5 took place in the North Dublin Union Workhouse, 16 in the South Dublin Union Workhouse, and one in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 16·8 per 1,000; the rate in the City was 17·2 (North City Districts, 14·9; South, 19·5) and in the Suburbs, 15·4.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 2·7 per 1,000 inhabitants, the rate for the City being 3·1 (1·7 in the North City Districts, and 4·5 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (10) are equal to an annual rate of 17·6 per 1,000. There were 2 deaths from measles, 5 from tuberculous phthisis (*phthisis*), and one accidental death.

No. 1 North City District, West (Summer-hill).—The deaths (14) are equal to an annual rate of 18·5 per 1,000, and include one death from *phthisis*, 3 deaths from diseases of the respiratory system, and one accidental death.

No. 2 North City District (Lisburn-street).—The deaths (10) are equivalent to an annual rate of 17·1 per 1,000. Among them are one death from enteric fever, 2 deaths from diarrhoeal diseases, 2 from *pneumonia* (not defined), and one death from *phthisis*.

No. 3 North City District (Benburb-street).—The deaths (6) represent an annual rate of 9·4 per 1,000.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 9·1; and Finglas and Glasnevin, part of, 13·7. Of the 2 deaths recorded for Coolock and Drumcondra, part of, one was caused by *phthisis*.

No. 1 South City District (South Earl-street).—The deaths (18) represent an annual rate of 22·9 per 1,000, and include one death from whooping-cough, 3 deaths from epidemic diarrhoea, one death from broncho-pneumonia, 3 deaths from tuberculous phthisis (*phthisis*), 4 deaths from bronchitis, and one accidental death.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·8 per 1,000. Diarrhoea, *pneumonia* (not defined), and tuberculous phthisis each caused one death, and there were 3 deaths from diseases of the respiratory system.

No. 3 South City District (Peter-street).—The deaths (12) are equal to an annual rate of 14·6 per 1,000. There were 2 deaths from diarrhoeal diseases and 5 from tuberculous disease.

No. 4 South City District (Grand Canal-street).—The deaths (12) are equivalent to an annual rate of 17·6 per 1,000. One death from diphtheria, one death from enteric fever, and 3 deaths from epidemic diarrhoea were recorded.

New Kilmainham District.—The deaths (5) are equal to an annual rate of 29·0 per 1,000. There was one death each from epidemic diarrhoea and tuberculous phthisis.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 14·3; Pembroke, 18·3; Blackrock, 6·0; and Kingstown, 17·8. The deaths from the principal epidemic diseases tabulated for these districts, include 2 deaths from diarrhoeal diseases for Rathmines and Rathgar, and one death from diarrhoea for Kingstown. The 10 deaths from all causes for Rathmines and Rathgar include one death from *pneumonia* (not defined); of the 10 deaths from all causes for Pembroke one death was from *pneumonia* (not defined) and one from bronchitis; and the 6 deaths from all causes for Kingstown include one death from tuberculous phthisis and one death from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baillie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area. (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 11th September, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 11th September, 1909.

From this it appears that:—

One case of measles was admitted into hospital during the week, 3 were discharged, there were 2 deaths, and 10 cases remained under treatment at its close.

Eleven cases of scarlet fever were admitted to hospital, 17 were discharged, and 67* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Three cases of diphtheria were admitted to hospital, 7 were discharged, and 35 patients remained under treatment at the close of the week.

Twelve cases of enteric fever were admitted to hospital during the week, 4 were discharged, there was one death, and 38 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 10 cases of pneumonia were admitted to hospital, 2 were discharged, there were 3 deaths, and 18 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·3) was equal to an average annual death-rate of 12·8 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12·3 per 1,000, the rate for Glasgow being 13·0 and for Edinburgh 10·0.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., D.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 11th September. From this Report it appears that of a total of 82 cases notified, 48 were scarlet fever, 11 phthisis, 11 diphtheria, 7 erysipelas, one enteric fever, and one cerebro-spinal fever. Among the 364 cases of infectious diseases in hospital at the close of the week were 192 cases of scarlet fever, 46 of measles, 43 of phthisis, 36 of diphtheria, 19 of whooping-cough, 11 of enteric fever, 6 of erysipelas, 2 of chicken-pox, and one of cerebro-spinal fever.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS AND DEATHS registered during the Week ending Saturday, 11th September, 1903, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions for the week, and for each of the two weeks immediately preceding, the Number of Uncertified Deaths; also the **Temperature** and **Rainfall** for the week, and for each of the two weeks immediately preceding.

| REGISTRATION—WEEK ENDING SATURDAY, 11th SEPTEMBER, 1903. | | | | | | | | | | METEOROLOGY. (c) | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 11th September, 1909:—

"As the season advances, the mean temperature of the air steadily decreases, and upon only three days in this week, did temperature reach the comparatively moderate reading of 60°. On Sunday the maximum was 61.3°, on Monday 61.4° and on Friday 60.0°. In the early part of the week the barometer was high in the Bay of Biscay, while depressions, moving eastwards, passed across the northern part of Scotland and seriously affected the weather in these Islands. Sunday morning was cloudy, and drizzle and rain fell for some hours during the day. Heavy showers with bright intervals occurred on Monday and in the early part of Tuesday. At this time a large and deep depression had advanced from the northwestward, the barometer reading at Sornoway being 29.27 inches. Monday was squally throughout and on Tuesday rough sea was recorded at all stations on the North, West and South coasts. During the latter part of the week a high pressure system spread along the west coast and extended from Ireland across England and the North Sea. Wednesday was generally fine, but Thursday proved overcast and damp for the greater part of the day. Friday and Saturday were both fine. On the latter day there was a strong northerly wind. In Dublin the mean height of the barometer was 30.005 inches, pressure ranging between 29.651 inches at 9 p.m. of Monday (wind, N.W.) and 30.222 inches at 9 a.m. of Thursday (wind, W.S.W.). The corrected mean temperature was 52.9°, the mean dry bulb reading at 9 a.m. and 9 p.m. being 55.4°. On Monday the screened thermometers rose to 61.4°, on Thursday they fell to 40.7°. On the same day the temperature on the grass fell to 36.0°. The prevailing winds were N., N.W., and W. Rain fell on 6 days to the amount of .539 inch, .212 inch being measured on Monday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29·849 inches. The highest reading (30·061) was on Thursday at 9 a.m., wind W.S.W., and the lowest (29·492) on Monday at 9 p.m., wind W.S.W.

The mean temperature for the week was 50·9°, being 4·3° below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Monday, on which day the thermometer registered 61·5°, and was lowest on Thursday, the mercury having fallen to 34·3°. The mean of the Dry Bulb for the week was 52·1° and of the Wet Bulb 49·7°. The mean humidity of the air was ·84, complete saturation being represented by 1·0. The rainfall during the week measured 0·589 inch.

At Greenwich the mean temperature for the week was 54·5°, the maximum 71·0°, and the minimum 40·6°; at Glasgow the maximum was 65·5°, the minimum 40·0°, and the mean 52·1°; and at Edinburgh the maximum was 62·6°, the minimum 42·1°, and the mean 51·5°. The rainfall at Greenwich measured 0·32 in.; at Glasgow, 0·60 in.; and at Edinburgh, 0·46 in.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 18TH SEPTEMBER, 1909.

[No. 37.]

*General Register Office, Charlemont House,
Dublin, 20th September, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 15·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| | | | | | | Wexford, . . . | 4·7 | 14·0 | 28·0 | 18·7 | 16·4 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 2·4 per 1,000, the rates varying from 0·0 in eleven of the districts to 13·6 in Waterford, the 11 deaths from all causes for that district including 7 from diarrhoeal diseases. Among the 93 deaths from all causes for Belfast are 7 from whooping-cough, and 15 from diarrhoeal diseases. Of the 26 deaths from all causes for Cork one is from whooping-cough and 2 are from diarrhoeal diseases, and among the 16 deaths from all causes for Limerick one is from whooping-cough and one from diarrhoea.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 207—107 boys and 100 girls—and the deaths to 136—68 males and 68 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 17·8 in every 1,000 of the population; omitting the deaths (numbering 4) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II.
‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 17·3 per 1,000. During the thirty-seven weeks, ending with Saturday last, the death-rate averaged 22·5, and was 2·2 below the mean rate for the corresponding portions of the ten years 1899-1908.

Among the deaths registered are one from measles, 2 from whooping-cough, one from diphtheria, 2 from enteric fever, and 6 from diarrhoeal diseases. (The deaths of 5 children under 5 years of age from enteritis were also registered). In the three preceding weeks, deaths from measles were 0, 0 and 2; deaths from whooping-cough were 5, 0 and one; deaths from diphtheria were one, 3 and one; deaths from enteric fever were one, one and 2; and deaths from diarrhoeal diseases were 30, 20 and 15, respectively.

One death from lobar pneumonia, 2 deaths from broncho-pneumonia, and 5 deaths from pneumonia (not defined) were recorded.

There were 30 deaths from all forms of tuberculous disease; of these, 22 deaths were from tuberculous phthisis (*phthisis*), 2 from tuberculous meningitis, 2 from tuberculous peritonitis, and 4 from other forms of tuberculous disease. In the three preceding weeks, deaths from all forms of tuberculous disease numbered 34, 24 and 21, respectively.

Three deaths were caused by carcinoma, one by sarcoma, and 2 by cancer, malignant disease (undefined).

The deaths of 4 infants were ascribed to prematurity.

There were 6 deaths from diseases of the brain and nervous system, 27 deaths from diseases of the heart and blood vessels, and 5 deaths from bronchitis.

Of 3 accidental deaths, one was caused by being run over on railway line, one was caused by a tramcar, and one by drowning.

In 2 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the death of one infant under one year old.

Thirty-eight of the persons whose deaths were registered during the week were under 5 years of age (24 being infants under one year, of whom 7 were under one month old) and 29 were aged 60 years and upwards, including 20 persons aged 70 and upwards, of whom 7 were octogenarians, and 3 (females) were stated to have been aged 90, 90, and 93 years, respectively.

Fifty-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 11 took place in the North Dublin Union Workhouse and 12 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 17·3 per 1,000; the rate in the City was 19·2 (North City Districts, 17·6; South, 20·9) and in the Suburbs, 10·8.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·6 per 1,000 inhabitants, the rate for the City being 1·5 (1·0 in the North City Districts, and 2·1 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (16) are equal to an annual rate of 28·2 per 1,000. Among them are one death each from whooping-cough and epidemic diarrhoea, 7 deaths from tuberculous phthisis (*phthisis*), one death from bronchitis, and one accidental death.

No. 1 North City District, West (Summer-hill).—The deaths (14) are equal to an annual rate of 18·5 per 1,000, and include one death from pneumonia (not defined) and 3 deaths from tuberculous disease.

No. 2 North City District (Lisburn-street).—The deaths (8) are equivalent to an annual rate of 13·7 per 1,000. One death from broncho-pneumonia, 2 deaths from tuberculous disease, and 2 deaths from diseases of the respiratory system were recorded.

No. 3 North City District (Benburb-street).—The deaths (8) represent an annual rate of 12·6 per 1,000. Lobar pneumonia caused one death and *phthisis* 2 deaths.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 9·8 per 1,000 inhabitants; Coolock and Drumcondra, part of, 22·7; and Finglas and Glasnevin, part of, 6·9. Of the 5 deaths from all causes for Coolock and Drumcondra, part of, one was from tuberculous disease; and the only death recorded for Finglas and Glasnevin, part of, was one from whooping cough.

No. 1 South City District (South Earl-street).—The deaths (17) represent an annual rate of 21·6 per 1,000, and include one death from pneumonia (not defined), 5 deaths from tuberculous disease, and one from bronchitis.

No. 2 South City District (Castle-street).—The deaths (8) are equal to an annual rate of 19·4 per 1,000. Diarrhoea and *phthisis* each caused one death.

No. 3 South City District (Peter-street).—The deaths (20) are equal to an annual rate of 24·4 per 1,000. Among them are one death each from measles and enteric fever, 2 deaths from epidemic diarrhoea, one death from pneumonia (not defined), 2 deaths from tuberculous phthisis (*phthisis*), and one accidental death.

No. 4 South City District (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000. There were 5 deaths from tuberculous disease and one death from broncho-pneumonia.

New Kilmainham District.—The only death recorded (equal to an annual rate of 5·8 per 1,000) was one from enteric fever.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 7·1; Pembroke, 11·0; Blackrock, 6·0; and Kingstown, 20·7. The deaths from the principal epidemic diseases tabulated for these districts include one death from diarrhoea for Pembroke; and one death each from diphtheria and *phthisis* and 3 deaths from diseases of the respiratory system; for Rathmines and Rathgar are one death from 2 deaths from pneumonia (not defined), and one death from *phthisis*; and the 7 deaths from all causes for Kingstown include one death from bronchitis.

* See Columns 10-13 of Table II.

NOTE—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—
 Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 18th September, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Patient admitted to hospital from Rathmines.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 18th September, 1909.

From this it appears that:—

One case of measles was discharged from hospital during the week, and 9 cases remained under treatment at its close.

Six cases of scarlet fever were admitted to hospital, 13 were discharged, and 60* cases remained under treatment at the close of the week.

Two cases of typhus remained under treatment in hospital at the end of the week.

Four cases of diphtheria were admitted to hospital, 10 were discharged, there were 2 deaths, and 27 patients remained under treatment at the close of the week.

Ten cases of enteric fever were admitted to hospital during the week, 4 were discharged, there were 2 deaths, and 42 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 7 cases of pneumonia were admitted to hospital, 10 were discharged, there were 2 deaths, and 13 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12.4) was equal to an average annual death-rate of 13.0 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12.1 per 1,000, the rate for Glasgow being 12.1 and for Edinburgh 14.1.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 18th September. From this Report it appears that of a total of 78 cases notified, 47 were scarlet fever, 14 diphtheria, 10 phthisis, 4 erysipelas, 2 puerperal fever, and one enteric fever. Among the 367 cases of infectious diseases in hospital at the close of the week were 204 cases of scarlet fever, 40 of diphtheria, 39 of phthisis, 36 of measles, 15 of whooping-cough, 10 of enteric fever, 9 of erysipelas, 2 of cerebro-spinal fever, and one of chicken-pox.

* See footnote (*) at foot of Table XII.

TABLE II.—**BIRTHS and DEATHS** registered during the Week ending Saturday, 18th September, 1969, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions and Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths : also the **Temperature** and **Rainfall** for the week, and for each of the two Weeks immediately preceding.

[illegible]

(a) According to the Census of 1901, but in the cases of the Dublin Registration Area, and for the Cities of Belfast and Londonderry, the Population given is that estimated to the middle of 1909.

(b) Formerly described as "Simple Continued Fever."

(c) Exclusive of Pneumonia.

(d) Exclusive of 4 deaths of persons (including one at 67 years), admitted to hospital from localities outside the Area.

(e) The Towns included in this Table, the readings at the nearest stations from which Returns are received have been adopted in several cases; thus, the readings at Drogheda have been adopted for Newtownards, those at Armagh for Lisburn, Lurgan, Newry, and Portadown, those at Markeess for Slicco, and those at Roche's Point for Cork and Glengarry.

(f) Observations at Ordnance Survey Omoo, Phoenix Park.

(g) Observations by Dr. John Moore, at Lee at Fitzwilliam-square.

(h) Observations at Roche's Point for Cork and Londonderry.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 18th September, 1909, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 18th September, 1909:—

"During this week, the weather in Dublin, and the Eastern and Southern parts of Ireland, was exceptionally fine. Practically no rain fell in the city, and the sky was often cloudless. Temperature was low, and on both Tuesday and Saturday the thermometer fell to 40° 9' in the screen. On Tuesday the grass minimum thermometer registered as low a reading as 35° 9'. Winds were light and variable and on several days mist and fog were recorded. On Sunday depressions of decreasing intensity were situated over Iceland and the South-West of France respectively, while a broad band of high pressure extended from the Atlantic across the British Isles. The morning was overcast and dull and some drizzling rain fell early. The day, however, cleared and the evening and night were fine. Thunder was heard at many places on the South coast of England and thunderstorms were reported from France. By Monday morning the Iceland depression had filled up, while the depression over France had moved across Germany. Over Ireland pressure was anticyclonic, and the high pressure system finally spread over the whole of Northern Europe causing fine weather generally. In Dublin the morning of Monday was overcast, but there was bright sunshine in the afternoon. The night was cold. Fog was noted on Tuesday, and again on Thursday and Friday. Wednesday evening was calm and misty, as were also Friday and Saturday. The horizon was nearly always lost in haze, and in the nights there was heavy dew. A violent thunderstorm occurred in Central England on Friday accompanied by heavy rain and hail. In Dublin the mean height of the barometer was 30·208 inches, pressure ranging between 30·383 inches and 30·382 inches at 9 a.m. and 9 p.m. respectively of Tuesday (wind, N.E.), and 30·078 inches at 9 p.m. of Thursday (wind, E.). The corrected mean temperature was 51·8°, the mean dry bulb reading being 50·6°. On Tuesday and Saturday the screened thermometers fell to 40° 9', on Saturday they rose to 63° 3', the range on that day being 22° 4'. The prevailing wind was N.E. A little drizzle fell on Sunday forenoon, '003 inch being caught in the gauge."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 30·049 inches. The highest reading (30·234) was on Tuesday at 9 a.m., air calm, and the lowest (29·918) on Thursday at 9 p.m., air calm.

The mean temperature for the week was 49°0', being 4°9' below the average for the corresponding period of the 10 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 63·8°, and was lowest on Tuesday, the mercury having fallen to 32·6°. The mean of the Dry Bulb for the week was 49·3° and of the Wet Bulb 46·9°. The mean humidity of the air was ·85, complete saturation being represented by 1·0. There was no rainfall during the week.

At Greenwich the mean temperature for the week was 55·3°, the maximum 69·0°, and the minimum 44·3°; at Glasgow the maximum was 67·0°, the minimum 35·8°, and the mean 52·7°; and at Edinburgh the maximum was 62·8°, the minimum 39·6°, and the mean 50·6°. The rainfall at Greenwich measured 0·58 in.; and at Edinburgh, 0·19 in. There was no rainfall recorded at Glasgow.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.]

WEEK ENDING SATURDAY, 25TH SEPTEMBER, 1909.

[No. 38.]

*General Register Office, Charlemont House,
Dublin, 27th September, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 16·9 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Kilkenny, . . . | 4·9 | 4·9 | 19·7 | 29·5 | 14·8 | Waterford, . . . | 25·3 | 31·2 | 21·4 | 7·8 | 21·4 |
| | | | | | | Wexford, . . . | 14·0 | 28·0 | 18·7 | 28·0 | 22·2 |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·9 per 1,000, the rates varying from 0·0 in fifteen of the districts to 4·8 in Sligo, the 2 deaths from all causes for that district including one from diarrhoea. Among the 121 deaths from all causes for Belfast are one from scarlet fever, 7 from whooping-cough, one from *pyrexia* (origin uncertain), and 13 from diarrhoeal diseases. Of the 29 deaths from all causes for Cork one is from scarlet fever, 2 are from whooping-cough, and 2 from diarrhoeal diseases. Included in the 4 deaths from all causes for Waterford are 2 from diarrhoeal diseases, and one of the 5 deaths from all causes for Dundalk is from typhus.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 215—106 boys and 109 girls—and the deaths to 157—81 males and 76 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 20·6 in every 1,000 of the population; omitting the deaths (numbering 8) of persons admitted into public institutions

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-13 of Table II.

from localities outside the Area, the rate was 19·5 per 1,000. During the thirty-eight weeks, ending with Saturday last, the death-rate averaged 22·4, and was 2·3 below the mean rate for the corresponding portions of the ten years 1899-1908.

The deaths registered include one death from scarlet fever, 2 deaths from diphtheria, 2 deaths from enteric fever, 6 deaths from diarrhoeal diseases, and one death from cerebro-spinal fever. In the three preceding weeks, deaths from scarlet fever were 2, 0 and 0; deaths from diphtheria were 3, one and one; deaths from enteric fever were one, 2 and 2; deaths from diarrhoeal diseases were 20, 15 and 6; and deaths from cerebro-spinal fever were 0, 0 and 0, respectively.

Lobar pneumonia and broncho-pneumonia each caused one death, and *pneumonia* (not defined) caused 2 deaths.

The 30 deaths from all forms of tuberculous disease include 21 deaths from tuberculous phthisis (*phthisis*), 3 from tuberculous meningitis, and 6 deaths from other forms of tuberculous disease. In the three preceding weeks, there were registered 24, 21 and 30 deaths, respectively, from all forms of tuberculous disease.

There were 7 deaths from carcinoma, and 11 deaths from cancer, malignant disease (undefined).

The deaths of 4 infants, prematurely born, were recorded.

Of 10 deaths from diseases of the brain and nervous system, 4 (all being deaths of infants under one year of age) were attributed to *convulsions*.

Fourteen deaths were caused by diseases of the heart and blood vessels, and 13 by bronchitis.

Of 2 accidental deaths, one was caused by fall off a tramcar and one (that of a child aged 2 years and 5 months) by burns.

In 2 instances the cause of death was "uncertified," there having been no medical attendant during the last illness; these cases include the death of one infant under one year old.

Forty-seven of the persons whose deaths were registered during the week were under 5 years of age (34 being infants under one year, of whom 10 were under one month old) and 40 were aged 60 years and upwards, including 13 persons aged 70 and upwards, of whom 7 were octogenarians.

Fifty-eight of the deaths registered during the week occurred in hospitals and other public institutions; of this number 11 took place in the North Dublin Union Workhouse and 16 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 19·5 per 1,000; the rate in the City was 19·4 (North City Districts, 16·9; South, 21·9) and in the Suburbs, 20·0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·3 per 1,000 inhabitants, the rate for the City being 1·7 (0·7 in the North City Districts, and 2·8 in the South), and for the Suburbs, 0·0 per 1,000.

No. 1 *North City District, East* (Clarence-street, North).—The deaths (13) are equal to an annual rate of 22·9 per 1,000, and include one death from scarlet fever, 2 deaths from *phthisis*, and 3 deaths from bronchitis.

No. 1 *North City District, West* (Summer-hill).—The deaths (11) are equal to an annual rate of 14·5 per 1,000. One death from *diarrhea*, 2 deaths from *phthisis*, and 2 deaths from bronchitis were recorded.

No. 2 *North City District* (Lisburn-street).—The deaths (12) are equivalent to an annual rate of 20·6 per 1,000. There were 3 deaths from tuberculous disease and 3 deaths from bronchitis.

No. 3 *North City District* (Benburb-street).—The deaths (13) represent an annual rate of 20·4 per 1,000. Among them are 5 deaths from tuberculous disease and 2 deaths from diseases of the respiratory system.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Coolock and Drumcondra, part of, 4·5 per 1,000 inhabitants; Clontarf and Howth, No. 1, part of, 0·0; and Finglas and Glasnevin, part of, 6·9.

No. 1 *South City District* (South Earl-street).—The deaths (24) represent an annual rate of 30·5 per 1,000, and include one death each from diphtheria, enteric fever, and epidemic *diarrhoea*, one death from lobar pneumonia, one from *pneumonia* (not defined), 5 deaths from tuberculous *phthisis* (*phthisis*), 2 deaths from diseases of the respiratory system, and one accidental death.

No. 2 *South City District* (Castle-street).—The deaths (7) are equal to an annual rate of 17·0 per 1,000. There were 2 deaths from tuberculous disease and one death from bronchitis.

No. 3 *South City District* (Peter-street).—The deaths (13) are equal to an annual rate of 15·9 per 1,000. One death from tuberculous disease and 2 deaths from diseases of the respiratory system were recorded.

No. 4 *South City District* (Grand Canal-street).—The deaths (14) are equivalent to an annual rate of 20·6 per 1,000. Among them are one death from diphtheria, 4 deaths from diarrhoeal diseases, one from *pneumonia* (not defined), one from tuberculous meningitis, and one from bronchitis.

New Kilmainham District.—The deaths (5) are equal to an annual rate of 29·0 per 1,000. Tuberculous *phthisis* caused one death.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 21·4; Pembroke, 31·1; Blackrock, 6·0; and Kingstown, 5·9. There was no death from any of the principal epidemic diseases tabulated for these districts. Among the 15 deaths from all causes for Rathmines and Rathgar are one death from cerebro-spinal fever, one from tuberculous disease, and 2 deaths from diseases of the respiratory system; the 17 deaths from all causes for Pembroke include one death from broncho-pneumonia, 4 deaths from tuberculous *phthisis* (*phthisis*), and one accidental death; and the only death recorded for Blackrock was one from *phthisis*.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Baile, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.,—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 25th September, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) Patient admitted to hospital from Rathmines.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 25th September, 1909.

From this it appears that:—

Two cases of measles were discharged from hospital during the week, and 7 cases remained under treatment at its close.

Sixteen cases of scarlet fever were admitted to hospital, 11 were discharged, and 65* cases remained under treatment at the close of the week.

Two cases of typhus were admitted to hospital during the week, and 4 cases remained under treatment at its close.

Ten cases of diphtheria were admitted to hospital, 5 were discharged, there was one death, and 31 patients remained under treatment at the close of the week.

Fourteen cases of enteric fever were admitted to hospital during the week, 3 were discharged, there was one death, and 52 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 9 cases of pneumonia were admitted to hospital, 3 were discharged, there was one death, and 18 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·2) was equal to an average annual death-rate of 12·6 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 13·8 per 1,000, the rate for Glasgow being 14·4 and for Edinburgh 10·9.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 25th September. From this Report it appears that of a total of 65 cases notified, 42 were scarlet fever, 9 phthisis, 8 diphtheria, 5 erysipelas, and one enteric fever. Among the 382 cases of infectious diseases in hospital at the close of the week were 215 cases of scarlet fever, 44 of diphtheria, 38 of measles, 37 of phthisis, 15 of whooping-cough, 11 of erysipelas, 6 of enteric fever, 2 of cerebro-spinal fever, and one of chicken-pox.

* See note (*) at foot of Table XII.

TABLE III.—DUBLIN REGISTRATION AREA.—DEATHS in the several Registrars' Districts of the City of Dublin and in the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, registered during the Week ending Saturday, the 25th September, 1903, with the number of uncertified deaths: also the deaths from all causes by certain age-periods. *The Deaths in Public Institutions are assigned to the Districts from which the deceased were admitted.*

METEOROLOGY

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.Sc., F.R.MET.SOC., reports as follows on the weather during the week ended 25th September, 1909:—

"Weather during this week was not so settled as during the preceding week, yet on the whole was very fair. Temperature was higher than it had been in the past fortnight and the wind was generally very light. Little rain fell, although the sky was very often clouded or overcast. On Sunday the distribution of pressure was even, the lowest readings being found in Germany (Berlin 29.96 inches). The day was cloudy at first, but afterwards became fine with bright sunshine. There was a decided increase in temperature, the maximum on that day (64.5°) being the highest reading since August. Some rain fell in the early morning of Monday and the day was rather cloudy at first but fine later. By this time a depression had appeared over Denmark and its neighbourhood, and this finally moved westwards across Scotland. The morning of Tuesday was overcast but the afternoon and evening were fine. Both Wednesday and Thursday were calm and foggy. Towards the end of the week barometric gradients were slight in nearly all regions. Some showers fell after midnight and in the early hours of Friday. The evening was calm. Saturday morning was overcast and dull, while the afternoon was very bright and fine. Fog occurred late at night. In Dublin the mean height of the barometer was 30.038 inches, the range being between 29.836 inches at 9 a.m. of Wednesday (air, calm) and 30.222 inches at 9 p.m. of Saturday (air, calm). The corrected mean temperature was 54.1°, the mean dry bulb reading being 53.4°. On Sunday the screened thermometers rose to 64.5°, on Thursday they fell to 43.8°. The prevailing wind was E. Rain fell on 2 days to the amount of .067 inch, .045 inch being measured on Sunday and .022 on Thursday. Fog occurred on Wednesday, Thursday and Saturday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.875 inches. The highest reading (30.067) was on Saturday at 9 p.m., air calm, and the lowest (29.673) on Wednesday at 9 a.m., air calm.

The mean temperature for the week was 52.0°, being 1.9° below the average for the corresponding period of the 9 years 1899-1902 and 1904-1908. The temperature was highest on Thursday, on which day the thermometer registered 65.9°, and was lowest on Tuesday, the mercury having fallen to 36.6°. The mean of the Dry Bulb for the week was 51.2° and of the Wet Bulb 49.9°. The mean humidity of the air was .92, complete saturation being represented by 1.0. The rainfall during the week measured 0.065 inch.

At Greenwich the mean temperature for the week was 56.3°, the maximum 68.6°, and the minimum 40.6°; at Glasgow the maximum was 61.0°, the minimum 39.0°, and the mean 51.7°; and at Edinburgh the maximum was 61.7°, the minimum 41.5°, and the mean 51.0°. The rainfall at Greenwich measured 0.57 in.; at Glasgow, 0.46 in.; and at Edinburgh, 1.17 ins.

The information in the preceding paragraph has been kindly furnished by the Registrars-General of England and Wales and of Scotland.

VOL. XLVI.] WEEK ENDING SATURDAY, 2ND OCTOBER, 1909. [No. 39.

*General Register Office, Charlemont House,
Dublin, 4th October, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 16·2 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

| TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. | TOWNS, &c. | Week ending | | | | Average Rate for 4 weeks. |

| Kilkenny, . . . | 4·9 | 19·7 | 29·5 | . | 13·5 | | | | | | |

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·9 per 1,000, the rates varying from 0·0 in fourteen of the districts to 13·3 in Lurgan, the 10 deaths from all causes for that district including 3 from diarrhoeal diseases. Among the 99 deaths from all causes for Belfast are 4 from whooping-cough, 2 from enteric fever, and 11 from diarrhoeal diseases. Included in the 31 deaths from all causes for Cork are 2 from whooping-cough, one from diphtheria, and 3 from diarrhoeal diseases. Of the 17 deaths from all causes for Londonderry 3 are from diarrhoeal diseases. Included in the 10 deaths from all causes for Waterford are 2 from diarrhoeal diseases, and one death from enteric fever is included in the 5 deaths from all causes for Tralee.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 50—117 boys and 133 girls—and the deaths to 144—80 males and 64 females.

DEATHS.

The deaths registered represent an annual rate of mortality of 18·8 in every 1,000 of the population; omitting the deaths (numbering 10) of persons admitted into public institution.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.
† See note (a), Table II. ‡ See columns 10-18 of Table II.

from localities outside the Area, the rate was 17·5 per 1,000. During the thirty-nine weeks, ending with Saturday last, the death-rate averaged 22·4, and was 2·3 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths from all causes include one death from typhus, 2 deaths from whooping-cough, one death from diphtheria, one death from enteric fever, and 5 deaths from diarrhoeal diseases. In each of the three preceding weeks, deaths from typhus were 0, 0 and 0; deaths from whooping-cough were one, 2 and 0; deaths from diphtheria were one, one and 2; deaths from enteric fever were 2, 2 and 2; and deaths from diarrhoeal diseases were 15, 6 and 6.

Of 13 deaths from *pneumonia* (all forms), one was from lobar pneumonia, 6 were from broncho-pneumonia, and 6 were attributed to *pneumonia* (not defined).

Among 22 deaths from tuberculous disease (all forms), there were 15 deaths from tuberculous phthisis (*phthisis*), one death from tuberculous meningitis, one death from tuberculous peritonitis, 2 deaths from *tuberculous mesenterica*, and 3 deaths from other forms of the disease. In the three weeks preceding the total deaths from all forms of tuberculous disease were 21, 30, and 30, respectively.

There were 4 deaths from carcinoma, one death from sarcoma, and 2 deaths from cancer (undefined).

The deaths of 5 infants resulted from prematurity.

Diseases of the brain and nervous system caused 11 deaths, this number includes a death at 1½ years from *convulsions*.

Twenty-eight deaths were attributed to diseases of the heart and blood vessels, and there were 15 deaths from bronchitis.

There was one death from scalding of a child aged 3½ years, and one infant was accidentally overlain in bed. The deaths of 2 persons by suicide were recorded.

In 3 instances the cause of death was "uncertified," there having been no medical attendance during the last illness; these cases include the deaths of 2 infants under one year old.

Thirty-five of the persons whose deaths were registered during the week were under 5 years of age (20 being infants under one year, of whom 9 were under one month old) and 45 were aged 60 years and upwards, including 26 persons aged 70 and upwards, of whom 4 were octogenarians and one (a female) was stated to have been aged 96 years.

Sixty-six of the deaths registered during the week occurred in hospitals and other public institutions; of this number 9 took place in the North Dublin Union Workhouse and 21 in the South Dublin Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 17·5 per 1,000; the rate in the City was 18·7 (North City Districts, 16·3; South, 21·2) and in the Suburbs, 13·7.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·2 per 1,000 inhabitants, the rate for the City being 1·0 (1·0 in the North City Districts, and 1·0 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (4) are equal to an annual rate of 7·1 per 1,000, and include one death from infective enteritis and one death from bronchitis.

No. 1 North City District, West (Summer-hill).—The deaths (13) are equal to an annual rate of 17·1 per 1,000. Of the deaths one was from *pneumonia* (not defined), there were 2 from tuberculous disease, and 5 deaths were caused by bronchitis.

No. 2 North City District (Lisburn-street).—The deaths (13) are equivalent to an annual rate of 22·3 per 1,000. Typhus and whooping-cough each caused one death, there was one death from broncho-pneumonia, there were 3 deaths from tuberculous disease, and one death from bronchitis.

No. 3 North City District (Benburb-street).—The deaths (13) represent an annual rate of 20·4 per 1,000. Among the deaths were one from *pneumonia* (not defined), 3 from tuberculous disease, and 3 deaths from bronchitis.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 0·0; and Finglas and Glasnevin, part of, 27·4. Of the 2 deaths recorded for Clontarf and Howth, No. 1, part of, one was from tuberculous disease and one from pleurisy; and of the 4 deaths from all causes for Finglas and Glasnevin, part of, one was caused by scalds.

No. 1 South City District (South Earl-street).—The deaths (17) represent an annual rate of 21·6 per 1,000. The deaths include 2 from tuberculous phthisis (*phthisis*) and 2 deaths from bronchitis.

No. 2 South City District (Castle-street).—The deaths (7) are equal to an annual rate of 17·0 per 1,000. Of the deaths one was due to *diarrhoea*, 2 to broncho-pneumonia, one to *phthisis*, and 2 to bronchitis.

No. 3 South City District (Peter-street).—The deaths (23) are equal to an annual rate of 28·1 per 1,000. Broncho-pneumonia and *pneumonia* (not defined) each caused 2 deaths, there were 5 deaths from tuberculous disease, 2 deaths from diseases of the respiratory system, and one accidental death.

No. 4 South City District (Grand Canal-street).—The deaths (12) are equivalent to an annual rate of 17·6 per 1,000. Whooping-cough and infective enteritis each caused one death, and there was one death from each of broncho-pneumonia and from *pneumonia* (not defined).

New Kilmmainham District.—The deaths (2) are equal to an annual rate of 11·6 per 1,000. There was not one death from any of the principal epidemic diseases nor from tuberculous disease registered in this district during the week under notice.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 10·0; Pembroke, 12·8; Blackrock, 23·8; and Kingstown, 17·8. The deaths from the principal epidemic diseases tabulated for these districts include one death from enteric fever for Rathmines and Rathgar, one from epidemic *diarrhoea* for Pembroke, and one from *diarrhoea* for Kingstown. Of the 7 deaths from all causes for Rathmines and Rathgar there were 2 deaths from *phthisis*; the 7 deaths from all causes for Pembroke include one death from tuberculous phthisis and one death by suicide; and of the 4 deaths from all causes for Blackrock one death was from lobar pneumonia, and there was one death by suicide.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1903," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin; Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R. A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 2nd October, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) From 1st October, 1909.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 2nd October, 1909.

From this it appears that:—

Two cases of measles were discharged from hospital during the week, and 5 cases remained under treatment at its close.

Twenty-five cases of scarlet fever were admitted to hospital, 13 were discharged, and 77* cases remained under treatment at the close of the week.

One case of typhus was admitted to hospital during the week, there was one death, and 4 cases remained under treatment at its close.

Eighteen cases of diphtheria were admitted to hospital, 12 were discharged, there was one death, and 36 patients remained under treatment at the close of the week.

Thirteen cases of enteric fever were admitted to hospital during the week, 10 were discharged, and 55 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 8 cases of pneumonia were admitted to hospital, 9 were discharged, and 17 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 11·6) was equal to an average annual death-rate of 12·3 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 13·1 per 1,000, the rate for Glasgow being 12·6 and for Edinburgh 12·8.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., R.S.C., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 2nd October. From this Report it appears that of a total of 69 cases notified, 36 were scarlet fever, 15 phthisis, 7 diphtheria, 6 erysipelas, 4 enteric fever, and one cerebro-spinal fever. Among the 396 cases of infectious diseases in hospital at the close of the week were 226 cases of scarlet fever, 44 of measles, 42 of diphtheria, 37 of phthisis, 17 of whooping-cough, 11 of erysipelas, 8 of enteric fever, and 3 of cerebro-spinal fever.

* See note (*) at foot of Table XII.

METEOROLOGY.

(For Abstract of Observations at several Irish Meteorological Stations—see TABLE II.)

Sir John Moore, M.D., D.P.H., D.S.C., F.R.MET.SOC., reports as follows on the weather during the week ended 2nd October, 1909:—

"At the beginning of this week a large but shallow baric depression lay far out upon the Atlantic, whereas atmospheric pressure was uniformly high over the British Isles. Fine, but cloudy and hazy weather prevailed on Sunday. Next day a shallow depression spread in across Ireland from the Ocean, causing very gloomy, wet weather. As this system crept slowly eastwards, the rainfall became heavy and continuous, especially in Wales, where disastrous and fatal floods occurred in consequence of the unusual downpour. In the 24 hours ended 7 a.m. of Tuesday Holyhead received 1·86 inches, Blacksod Point, Co. Mayo, 1·53 inches, Birr Castle 1·02 inches, and Liverpool 96 inch. On Wednesday morning 1·85 inches were registered at Pembroke, 1·9 inches at Ross, Herefordshire, 97 inch at Bath, and 94 inch at Dungeness in Kent. In Dublin the total yield of this rainstorm was 3·26 inch. In this City the clouds broke on Tuesday evening, permitting a very near approach of the full moon and the planet Mars to be well seen at intervals through the following night. Wednesday and Thursday were fine, but in the course of the latter day another area of low pressure spread in over Ireland from the Atlantic. This system brought a renewed rainfall, followed by excessive gloom and dense fog on Friday morning. The weather improved later and temperature rose several degrees, so that the week closed with warmth and comparatively summerlike conditions. In Dublin the mean height of the barometer was 29·887 inches, the range of pressure being from 30·260 inches at 9 a.m. of Sunday (wind, calm) to 29·551 inches at 4 p.m. of Friday (wind, W.). The corrected mean temperature was 55·3°, of Sunday (wind, calm) to 55·1°. The screened thermometers fell to 46·0° on Thursday and rose to 65·3° on Saturday. Calms and variable winds prevailed, chiefly from N.E. and S.W. Rain fell on 5 days to the amount of 1·027 inches, 638 inch being recorded on Monday."

At the Observatory of the Ordnance Survey Office, Phoenix Park, the mean height of the barometer during the week was 29.728 inches. The highest reading (30.102) was on Sunday at 9 a.m., air calm, and the lowest (29.421) on Friday at 9 a.m., air calm.

The mean temperature for the week was 53.6°, being 0.5° above the average for the corresponding period of the 9 years 1899-1908. The temperature was highest on Saturday, on which day the thermometer registered 65.0°, and was lowest on Thursday, the mercury having fallen to 40.9°. The mean of the Dry Bulb for the week was 54.4° and of the Wet Bulb 53.3°. The mean humidity of the air was .93, complete saturation being represented by 1.0. The rainfall during the week measured 0.988 inch.

At Greenwich the mean temperature for the week was 53.1°, the maximum 66.0°, and the minimum 43.1°; at Glasgow the maximum was 62.4°, the minimum 38.0°, and the mean 50.9°; and at Edinburgh the maximum was 62.5°, the minimum 43.8°, and the mean 50.6°. The rainfall at Greenwich measured 0.72 in.; at Glasgow, 0.58 in.; and at Edinburgh, 0.71 in.

The information in the preceding paragraph has been kindly furnished by the Registrar-General of England and Wales and of Scotland.

OLIVER & BOYD, TWEEDDALE COURT, EDINBURGH.

Price 1½d.

VOL. XLVI.] QUARTER ENDING SATURDAY, 2ND OCTOBER, 1909. [No. 39A.

DUBLIN REGISTRATION AREA.—Births.—In the Dublin Registration Area, which consists of the city of Dublin and the urban districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown, the total area thereof being 13,757 statute acres, and the population, estimated to the middle of 1909, 398,356, there were registered during the thirteen weeks ended on Saturday, 2nd October, 1909, 2,887 births—1,427 boys and 1,460 girls—being equal to an annual ratio of 1 in 34·5, or 29·0 in every 1,000 of the population.

The number of births registered in the city was 2,438, equivalent to an annual rate of 31·8 in every 1,000 of the population; and in the urban districts named above, 449, equal to an annual rate of 19·6 in every 1,000 of the population.

There were registered in London during the same period 28,861 births—being equal to an annual birth-rate of 23·9 in every 1,000 of the estimated population; in Glasgow there were registered 5,550, being equal to 25·5 per 1,000; and in Edinburgh, 1,750—a number affording an annual birth-rate of 19·7 in every 1,000 of the estimated population.

Deaths.—The number of deaths registered in the Dublin Registration Area during the quarter was 1,791—900 males and 891 females—affording an annual ratio of 1 in 55·6, or 18·0 in every 1,000 of the estimated population; omitting the deaths (86) of persons admitted into Public Institutions from localities outside the Area, the rate was 17·1 per 1,000. The annual mean mortality represented by the deaths registered during the third quarter of the ten years, 1899–1908, in the Dublin Registration Area as then constituted, was 21·8 per 1,000 of the estimated mean population of those years.

The number of deaths of inhabitants* of the North City districts registered last quarter was 676, representing an annual mortality of 17·2 in every 1,000 of the population; and the number in the South City districts was 721, equivalent to a rate of 19·3 per 1,000. In the urban districts the number of deaths registered was 308, being equal to an annual death-rate of 13·5 in every 1,000.

The number of deaths registered in London during the same period was 13,775—a number equal to an annual rate of mortality of 11·4 in every 1,000 of the inhabitants; in Glasgow the number was 2,715, equal to 12·5 in every 1,000; and in Edinburgh, 1,083, affording an annual death-rate of 12·2 in every 1,000 of the estimated population.

Diseases.—The number of deaths from the principal epidemic diseases† registered in the Dublin Registration Area during last quarter was 205, being 41 above the number for the preceding quarter; and the annual rate per 1,000 of the population represented by the deaths from these diseases was 2·1, being 0·4 above the rate for the preceding three months.

The following tabular statement shows the mortality from each of the principal epidemic diseases in the period under notice, and the average number of deaths from these diseases which occurred in the corresponding period of the 10 years, 1899–1908:—

| NAMES OF DISEASES. | No. of Deaths in September Quarter, 1909. | Average No. of Deaths in September Quarters, 1899- 1908. |
|--|---|--|
| Small-pox, - - - | - | - |
| Measles, - - - | 11 | 50 |
| Scarlet Fever, - - - | 6 | 7 |
| Typhus, - - - | 1 | 2 |
| Whooping-cough, - - - | 23 | 26 |
| Diphtheria, - - - | 18 | 11 |
| <i>Pyrexia</i> (origin uncertain), - - - | - | 2 |
| Enteric Fever, - - - | 14 | 22 |
| Diarrhoeal Diseases, - - - | 132 | 211 |

Small-pox.—There were no deaths from small-pox, nor was there any record of the existence of the disease in the Dublin Registration Area during the period under notice.

Measles.—Deaths from measles numbered 11, the average for the September quarter in the years 1899–1908 being 50. From Table I. it appears that 27 cases were admitted to hospitals; 52 were discharged; there were 2 deaths in hospital and 5 cases remained under treatment on the 2nd October, 1909. Of the 11 deaths 6 appertained to North Dublin City, 3 to South Dublin City, and 2 to the Pembroke urban district.

* *Scarlet Fever.*—Although the mortality from scarlet fever is low, the deaths numbering 6, a large number of cases were treated in the hospitals, 179 being admitted, 174 being discharged, and 77 (not including 16 in Beneavin, the convalescent home of Cork-street Fever Hospital) were under treatment at the close of the period, two deaths only occurred in hospitals according to the figures presented in Table I. Of the 6 deaths, 3 were inhabitants of North Dublin City, one of South Dublin City, one of Rathmines and Rathgar urban district, and one was the death of a person admitted to an institution from without the Registration Area.

Typhus.—As in the preceding quarter one death from typhus was registered, the death being of a person belonging to the district of North City No. 2.

* The death-rates referring to the several Dublin Districts have been calculated on the mortality for the respective districts as corrected by the distribution of deaths in Public Institutions according to the localities from which the deceased persons were admitted

† See note (*), p. 648b.

Whooping-cough.—Twenty-three deaths, corresponding to a rate of 0·23 per 1,000 of the estimated population of the Dublin Registration Area, were attributed to whooping-cough. This number is below the average by 3. Deaths from whooping-cough in each of the three preceding quarters were 27, 41, and 76. Of the 23 deaths above-mentioned, 12 appertained to the districts of North Dublin City, 10 to the districts of South Dublin City, and one to Kingstown urban district.

Diphtheria.—Deaths from diphtheria, which were 14 in the December quarter of 1908, rose to 23 in the succeeding quarter, fell to 9 in the June quarter of 1909, and again rose in the quarterly period under notice to 18, the average for the September quarter of the 10 years, 1899–1908, being 11. Of the 18 deaths, which represent an annual rate of 0·18 per 1,000, one appertained to the district of North City No. 2, 12 to South City districts, 2 to Pembroke urban district, and one to Kingstown urban district, and there were 2 deaths of persons admitted to institutions from without the Area. The hospital statistics show that 115 cases of diphtheria were admitted, 91 were discharged, 14 died in hospitals, and 36 patients remained under treatment at the close of the period.

Enteric Fever.—There were 14 deaths from enteric fever registered during the period under review, the number corresponding to an annual rate of 0·14 per 1,000 of the population of the area (the average for the corresponding period in the preceding 10 years was 22), and the deaths in the three preceding quarters 29, 25, and 17 respectively. In comparison with the preceding period, it may be seen in Table I. that 38 cases were under treatment on the 3rd July, while 55 are reported as having been in hospitals at the close of the period under notice.

Diarrhœal Diseases.—Compared with the mortality in the September quarter of 1908 (230 deaths), and also with the average (211 deaths) for the corresponding quarter in the past 10 years, the figure 132 representing the deaths registered from diarrhœal diseases in the period under notice, shows a substantial decrease; it is, however, greater than the sum of the deaths from the other principal epidemic diseases, added to deaths from influenza and deaths from cerebro-spinal fever. Of the total deaths, 50 appertained to North Dublin city districts, corresponding to an annual rate of 1·27 per 1,000; 60 to the South Dublin city districts, corresponding to a rate of 1·60 per 1,000, and 22 to the urban districts, corresponding to a rate of 0·96 per 1,000. The mortality statistics for the September quarter are always augmented by the increase in the death-rate from diarrhœal diseases. In each of the three preceding periods the deaths from diarrhœal diseases were 56, 20, and 23 respectively.

Influenza.—Only 3 deaths were attributed to influenza, the average being 9 for the corresponding quarterly period in the preceding 10 years.

Cerebro-spinal Fever.—During the quarter the deaths of two persons were caused by cerebro-spinal fever. In the four preceding quarters such deaths were 5, 2, 2, and 7 respectively.

Pneumonia.—The 96 deaths from pneumonia (all forms) include 9 deaths from lobar pneumonia, 29 deaths from broncho-pneumonia, and 58 deaths from *pneumonia* (not defined). The average number of deaths from pneumonia for the September quarter of the preceding 10 years is 99.

Tuberculous Disease.—The death-roll from all forms of tuberculous disease amounted to 329, as against 377 deaths in the September quarter of 1908—452 in the December quarter of 1908, 449 in the March quarter of 1909, and 411 in the June quarter of 1909. The total deaths (329) correspond to an annual death-rate of 3·30 per 1,000; among the total, 227 deaths were from tuberculous phthisis, the average number for such deaths in the corresponding quarter of the preceding decade being 270. There were also included in the total, 40 deaths from tuberculous meningitis, 6 from tuberculous peritonitis, 2 from *tabes mesenterica*, and 54 from general tuberculosis and other forms of the disease. In Table II. it may be seen that 130 deaths from all forms of the disease appertained to North Dublin City, 137 to South Dublin City, 18 to the urban district of Rathmines and Rathgar, 16 to the urban district of Pembroke, 4 to the urban district of Blackrock, and 9 to the urban district of Kingstown, the corresponding rates being 3·31, 3·66, 1·97, 2·24, 1·83, 2·04 per 1,000 of the respective estimated population of these areas.

Malignant Diseases.—Under the head of malignant diseases there were classified 52 deaths from carcinoma, 3 deaths from sarcoma, and 51 deaths from cancer (undefined), making a total of 106 deaths, which is represented by an annual rate of 1.06 per 1,000 for the Area.

Premature Births.—The number of deaths of infants which was returned as being consequent on prematurity was 46.

Diseases of the Brain and Nervous System.—There were 34 deaths from *convulsions* (28 being of infants under one year of age) included in the total of 110 deaths from diseases of the brain and nervous system. These deaths are equal to an annual rate of 1.10 per 1,000.

Diseases of the Heart and Blood Vessels.—The rate represented by the deaths (267) in this group of diseases was 2.68 per 1,000 of the estimated population of the Area.

Diseases of the Respiratory System.—These deaths include 118 deaths from bronchitis and number in the aggregate 144, the average for the September quarter of the 10 years, 1899-1908, being 152. The rate representing the deaths from diseases of the respiratory system is 1.45 per 1,000 of the population estimated to the middle of 1909.

Accidental Violence.—Forty-seven deaths were attributed to accidental violence. The total includes 11 deaths by drowning, 8 by vehicles and horses, 5 by burns or scalds, 3 being of children under 5 years of age, 5 by suffocation in bed of infants, and one death by poisoning.

Homicide.—Not one death was attributable to homicidal violence during the quarterly period.

Suicide.—As returned by the coroner, it appears that 3 persons deprived themselves of life by their own act.

TABLE I.—THE NUMBER OF CASES OF THE UNDERMENTIONED DISEASES treated in Dublin Hospitals during the **Quarter (13 weeks) ended Saturday, 2nd October, 1909.**

| DISEASES. | No. of Cases in Hospital at close of previous quarter. | No. admitted during quarter. | Discharged. | Died. | No. under treatment on above date. |
|----------------------|--|------------------------------|-------------|-------|------------------------------------|
| Small-pox, . . . | — | — | — | — | — |
| Measles, . . . | 32 | 27 | 52 | 2 | 5 |
| Scarlet Fever, . . . | 74 | 179 | 174 | 2 | 77* |
| Typhus, . . . | 2 | 3 | — | 1 | 4 |
| Diphtheria, . . . | 26 | 115 | 91 | 14 | 36 |
| Enteric Fever, . . . | 38 | 106 | 81 | 8 | 55 |
| Pneumonia, . . . | 26 | 95 | 89 | 15 | 17 |

* Exclusive of 16 patients in Beneavin, the convalescent home of Cork-street Fever Hospital.

In 36 instances the cause of death was uncertified, there having been no medical attendant during the last illness. Of the 36 cases, 22 (or 61.1 per cent.) were deaths of children under 5 years of age: these 22 deaths form 3.6 per cent. of the total number of deaths of children of that age-period. Of the deaths of 123 infants under one month old registered, there were 15 (or 12.2 per cent.) regarding which the cause was uncertified.

From Table II., on pages 646-7, it will be seen that, excluding 86 deaths of persons admitted into Public Institutions from localities outside the Dublin Registration Area, the number of deaths registered during the quarter was 1,705, equal to an annual rate of 17.1 per 1,000 of the estimated population, and that 199 of these deaths, representing an annual rate of 2.0 per 1,000 persons, were caused by the principal epidemic diseases.† The death-rate for the city (from all causes) was 18.2 per 1,000, and for the urban districts 13.5 per 1,000. The death-rate

† See note (*), page 618b.

represented by the mortality from the principal epidemic diseases in the city was 2·2, and in the urban districts 1·4, the rates for the several districts varying from 0·5 in Finglas and Glasnevin, part of, and in Blackrock urban district, to 4·0 in New Kilmainham, the 37 deaths from all causes for that district including 2 from whooping-cough, one from enteric fever, and 6 from diarrhoeal diseases.

Occupations.—Table III., on pages 648–8a, shows the occupations or social position of the persons whose deaths were registered during the quarter, the various callings being grouped in classes and orders, so as to show the respective rates of mortality in the several social grades of the population. From this Table it will be observed that the deaths in families of the “Professional and Independent Class” were equal to an annual rate of 9·2 per 1,000 of the persons in that class according to the Census of 1901; in the “Middle Class” the death-rate was 14·0 per 1,000; among the “Artisan Class and Petty Shopkeepers” it was 14·6; and in the “General Service Class” it was 18·7.

Ages.—Of the 1,791 persons whose deaths were registered in the Dublin Registration Area during the quarter, 603 were under 5 years of age, including 413 infants under one year of age, the latter representing a rate of 143·1 per 1,000 births registered. The number of deaths of children under 5 years of age is equal to an annual mortality of 63·2 in every 1,000 children at that age (according to the Census of 1901); 106 were between the ages of 5 and 20, representing an annual rate of 4·0 per 1,000 persons of that age period; the total number under 20 years being equal to an annual mortality of 19·6 per 1,000 of the population at that age period (according to the Census of 1901); 295, or 8·7 per 1,000 persons, were between 20 and 40; 355, or 20·7 per 1,000, between 40 and 60; 359, or 59·2 per 1,000, between 60 and 80; 73, or 153·4 per 1,000, were aged 80 and upwards, including 10 persons aged 90 and upwards.

Public Institutions.—Of the 1,791 deaths recorded during the quarter, 747, or 41·7 per cent., occurred in public institutions, viz., 428 in the various hospitals, prisons, and lunatic asylums; 128 in the North Dublin Union Workhouse; 186 in the South Dublin Union Workhouse; and 5 (those of persons admitted from within the Dublin Registration Area) in the Rathdown Union Workhouse.

Weather.—The mean temperature for thirteen weeks, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, was 55·9°. At Greenwich, for the quarter, it was 58·7°; at Glasgow, 55·7°; and at Edinburgh, 54·8°.

The rainfall at Dublin during the thirteen weeks measured 5·846 inches; at Greenwich, 7·43 inches; at Glasgow, 8·03 inches; and at Edinburgh, 7·57 inches.

TABLE II.—Showing for the **Quarter** (13 weeks) **ended 2nd October, 1909**, the number AREA, the annual Rate per 1,000 of the Population of the respective Districts represented the principal causes; also the Deaths at certain age-periods, and the number of Uncertified *were admitted.*

*Formerly described as "Simple Continued Fever."

Twenty-two Principal Town Districts of Ireland.—The average annual death-rate represented by the deaths from all causes registered during last quarter in the Dublin Registration Area and twenty-one of the principal Urban Districts of Ireland (exclusive of deaths in Public Institutions of persons admitted from without the districts), was 15·8 per 1,000 persons, the respective rates for the several districts being as follow, ranging in order from the lowest to the highest :—
 Armagh, 6·3 ; Clonmel, 9·4 ; Kilkenny, 10·6 ; Drogheda, 11·6 ; Sligo, 12·1 ; Newry, 12·6 ; Portadown, 13·1 ; Limerick, 13·1 ; Lurgan, 13·9 ; Queenstown, 14·2 ; Belfast, 14·6 ; Dundalk, 15·0 ; Wexford, 15·0 ; Ballymena, 15·1 ; Londonderry, 15·1 ; Tralee, 16·2 ; Newtownards, 17·1 ; Dublin Registration Area, 17·1 ; Lisburn 18·2 ; Waterford, 18·5 ; Cork, 19·0 ; and Galway, 23·5.

The average annual rate represented by the deaths from the principal epidemic diseases* in the 22 districts is 2·0 per 1,000 of the population, the rates varying from 0·0 in three of the districts to 5·4 in Waterford ; the 124 deaths from all causes registered in that district including 6 from whooping-cough and 30 from diarrhœal diseases. The 1,410 deaths from all causes for Belfast include 2 from scarlet fever, 54 from whooping-cough, 3 from diphtheria, one from *pyrexia* (origin uncertain), 7 from enteric fever, and 147 from diarrhœal diseases.

The following is a synopsis of the mortality from the principal epidemic diseases* in the *twenty-one provincial urban districts* already named, and Tables IV. and V. give in detail the results of the registration for the quarter :—

Small-pox.—It appears from Table IV. that there was no record of mortality from small-pox in the 22 town districts of Ireland during the quarter.

Measles.—In Ballymena one death and in Lisburn 2 deaths were registered from measles.

Scarlet Fever.—There were registered 2 deaths in Belfast, 4 deaths in Cork, one death in Limerick, and one death in Lurgan.

Typhus.—One death from typhus was registered in Dundalk.

Whooping-cough.—During the period 54 deaths were registered in Belfast, 20 in Cork, one in Londonderry, 7 in Limerick, 6 in Waterford, and one in Armagh.

Diphtheria.—Of the deaths from diphtheria 3 were registered in Belfast, 2 in Cork and Limerick respectively, and one in each of the following districts :—Londonderry, Galway, Lurgan, Lisburn, and Armagh.

Enteric Fever.—The deaths from enteric fever included 7 in Belfast, 3 in Limerick, 2 in Cork, and 2 in Tralee.

One death from pyrexia (origin uncertain) was returned for Belfast.

Diarrhœal Diseases.—From Belfast 147 deaths, from Cork 31 deaths, from Waterford 30 deaths, from Londonderry 22 deaths, and from each of Limerick and Wexford 5 deaths were returned among the fatalities from diarrhœal diseases.

Cerebro-spinal Fever.—The deaths registered from cerebro-spinal fever or *cerebro-spinal meningitis* for Belfast, which numbered 6, 12 and 5 in the three preceding quarters, declined to 2 in the period under notice.

Phthisis.—The death-rate from phthisis for the 22 towns in the aggregate was 2·0 per 1,000 of the population ; for the Dublin Registration Area it was 2·2 per 1,000, for Belfast County Borough 1·7 per 1,000, and for the Urban Districts collectively (exclusive of Belfast and Dublin Registration Area), it was 2·2 per 1,000, exclusive of deaths in public institutions of persons admitted from without the respective areas.

* Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, *pyrexia* (origin uncertain), enteric fever, and diarrhœal diseases.

REGISTRATION--QUARTER (13 WEEKS) ENDING SATURDAY, 2ND OCTOBER, 1909.

* The population given for the Dublin Registration Area and its component parts, and the cities of Belfast and Londonderry, is that estimated to the middle of the year 1900; that for each of the other districts is the Population according to the Census of 1901.

* The population given for the Dublin Registration Area and its component parts, and the cities of Belfast and Londonderry, is that estimated to the middle of the year 1900; that for each of the other districts is the Population according to the Census of 1901.

TABLE V.—Showing, by REGISTRARS' DISTRICTS, the Number of BIRTHS and DEATHS in the CITIES or URBAN DISTRICTS of BELFAST and CORK registered during the Quarter (13 weeks) ended 2nd October, 1908. Deaths in Public Institutions of persons admitted from without each City being omitted, and all other Deaths in Institutions distributed according to the *Medical Officer's Report*. Deaths from All Causes and from the principal Epidemic Diseases; the Number of Deaths of the Population according to the Census of 1901 represented by the Deaths from All Causes and from the principal Epidemic Diseases; the Number of Deaths at certain AGE-PERIODS: the Number of Deaths from some of the Principal CAUSES: the Number of UNCERTIFIED DEATHS, &c.

VOL. XLVI.]

WEEK ENDING SATURDAY, 9TH OCTOBER, 1909.

[No. 40.]

*General Register Office, Charlemont House,
Dublin, 11th October, 1909.*

TWENTY-TWO TOWN DISTRICTS.

The average annual death-rate represented by the deaths registered* last week as appertaining to the Dublin Registration Area and the twenty-one principal provincial Urban Districts of Ireland was 15·1 per 1,000 of their aggregate population, which, for the purposes of these Returns, is estimated at 1,142,308.† The deaths registered in each of the past four weeks and during the whole of that period, as appertaining to the several Districts, alphabetically arranged, corresponded to the following annual rates per 1,000. In some instances, owing to deaths not having been registered within the week in which they occurred, the rates do not fairly represent the weekly mortality.

The deaths from certain epidemic diseases‡ registered as appertaining to the 22 districts during last week* were equal to an annual rate of 1·7 per 1,000, the rates varying from 0·0 in sixteen of the districts to 4·1 in each of Cork and Limerick. Of the 95 deaths from all causes for Belfast 3 are from whooping-cough, 2 from enteric fever, and 11 from diarrhoeal diseases. Among the 35 deaths from all causes for Cork 2 are from whooping-cough and 4 from diarrhoeal diseases. Of the 14 deaths from all causes for Limerick there is one death each from whooping-cough, enteric fever and diarrhoea, and one of the two deaths for Waterford is from whooping-cough.

DUBLIN REGISTRATION AREA.

In the Dublin Registration Area the births registered during the week amounted to 193—106 boys and 87 girls—and the deaths to 134—69 males and 65 females.

* Exclusive of deaths of persons admitted into Public Institutions from without the respective Districts.

† See note (a), Table II.

‡ See columns 10-18 of Table II.

DEATHS.

The deaths registered represent an annual rate of mortality of 17·5 in every 1,000 of the population; omitting the deaths (numbering 6) of persons admitted into public institutions from localities outside the Area, the rate was 16·8 per 1,000. During the forty weeks ending with Saturday last, the death-rate averaged 22·3, and was 2·3 below the mean rate for the corresponding portions of the ten years 1899-1908.

The total deaths, in number 134, included one death from measles, 3 deaths from whooping-cough, one death from diphtheria, one death from cerebro-spinal fever, and 5 deaths from diarrhoeal diseases. In each of the three preceding weeks, deaths from measles were one, 0 and 0; deaths from whooping-cough were 2, 0 and 2; deaths from diphtheria were one, 2 and one; deaths from cerebro-spinal fever were 0, 1 and 0; and deaths from diarrhoeal diseases were 6, 6 and 5.

The 11 deaths from pneumonia (all forms) include one from lobar pneumonia, 3 from broncho-pneumonia, and 7 from pneumonia (not defined).

Tuberculous disease (all forms) caused 22 deaths including 17 deaths from tuberculous phthisis (*phthisis*), 3 deaths from tuberculous meningitis and 2 deaths from other tuberculous diseases. In each of the three preceding weeks deaths from all forms of tuberculous disease were 30, 30 and 22.

Four deaths were attributed to carcinoma and 4 to cancer (undefined).

The deaths of 4 infants born prematurely were registered.

Of 12 deaths from diseases of the brain and nervous system 2 were of infants under one year of age from *convulsions*.

Diseases of the heart and blood vessels accounted for the deaths of 15 persons, and there were 8 deaths from bronchitis.

Of 5 deaths assigned to accidental causes, one was by drowning, one was by poisoning, and one occurred from failure of respiration during an operation for goitre.

In one instance the cause of death was "uncertified," there having been no medical attendant during the last illness; this case was that of an infant under one year of age.

Thirty-five of the persons whose deaths were registered during the week were under 5 years of age (26 being infants under one year, of whom 14 were under one month old) and 36 were aged 60 years and upwards, including 19 persons aged 70 and upwards, of whom 2 were octogenarians and one (a female) was stated to have been aged 95 years.

Fifty-two of the deaths registered during the week occurred in hospitals and other public institutions; of this number 8 took place in the North Dublin Union Workhouse, 5 in the South Dublin Union Workhouse, and 4 in the Rathdown Union Workhouse.

The following are the principal features of the Dublin District Returns for last week, deaths in Public Institutions being assigned to the Districts from which the deceased were admitted, and the annual death-rate for each District calculated on the mortality so distributed. [See Tables III. and VII.]

As already stated, the death-rate for the entire Registration Area was 16·8 per 1,000; the rate in the City was 18·2 (North City Districts, 17·6; South, 18·3) and in the Suburbs, 12·0.

The deaths from certain epidemic diseases* in the entire area equal an annual rate of 1·3 per 1,000 inhabitants, the rate for the City being 1·2 (0·7 in the North City Districts, and 1·7 in the South), and for the Suburbs, 1·7 per 1,000.

No. 1 North City District, East (Clarence-street, North).—The deaths (11) are equal to an annual rate of 19·4 per 1,000, and include one death each from whooping-cough, *pneumonia* (not defined), and *phthisis*, 2 deaths from diseases of the respiratory system, and one death by accidental drowning.

No. 1 North City District, West (Summer-hill).—The deaths (10) are equal to an annual rate of 13·2 per 1,000. There were 2 deaths from *pneumonia* (not defined), and 2 deaths from *phthisis*.

No. 2 North City District (Lisburn-street).—The deaths (12) are equivalent to an annual rate of 20·6 per 1,000. Broncho-pneumonia and *pneumonia* (not defined) each caused one death, there was one death from tuberculous *phthisis*, also one death from tuberculous meningitis, one death from bronchitis, and one accidental death.

No. 3 North City District (Benburb-street).—The deaths (10) represent an annual rate of 15·7 per 1,000. The deaths include one from whooping-cough, 5 from tuberculous disease, and one by accidental poisoning.

Other North City Districts.—The annual death-rates represented by the deaths recorded last week are:—Clontarf and Howth, No. 1, part of, 19·6 per 1,000 inhabitants; Coolock and Drumcondra, part of, 27·3; and Finglas and Glasnevin, part of, 13·7. Of the 2 deaths recorded for Clontarf and Howth, No. 1, part of, one was from accidental poisoning by corrosive sublimate. Of the 6 deaths for Coolock and Drumcondra, part of, one was from tuberculous *phthisis* and one from bronchitis; and one of the 2 deaths for Finglas and Glasnevin, part of, was from tuberculous *phthisis*.

No. 1 South City District (South Earl-street).—The deaths (15) represent an annual rate of 19·1 per 1,000. Of the total one was from broncho-pneumonia, 2 were from tuberculous *phthisis*, and there was one death from bronchitis.

No. 2 South City District (Castle-street).—The deaths (9) are equal to an annual rate of 21·8 per 1,000. One death each was registered from diphtheria, broncho-pneumonia, *pneumonia* (not defined), and *phthisis*, and there were 2 deaths from bronchitis.

No. 3 South City District (Peter-street).—The deaths (12) are equal to an annual rate of 14·6 per 1,000. Measles and epidemic enteritis each caused one death, there was one death from tuberculous *phthisis*, also one death from bronchitis.

No. 4 South City District (Grand Canal-street).—The deaths (17) are equivalent to an annual rate of 25·0 per 1,000. Whooping-cough and diarrhoea each caused one death, there was one death from lobar pneumonia and one death from *pneumonia* (not defined), there were 3 deaths from tuberculous disease, and one accidental death.

New Kilmainham District.—The only death recorded is equal to an annual rate of 5·8 per 1,000, and was caused by apoplexy.

Urban Districts.—The annual death-rates represented by the deaths recorded last week are:—Rathmines and Rathgar, 14·3; Pembroke, 7·3; Blackrock, 17·9; and Kingstown, 11·8. The deaths from the principal epidemic diseases tabulated for these districts include 2 from diarrhoeal diseases for Rathmines and Rathgar and one from epidemic enteritis for Pembroke. Of the 10 deaths from all causes for Rathmines and Rathgar one was from *pneumonia* (not defined) and one from tuberculous disease; and of the 3 deaths from all causes for Blackrock one was from bronchitis.

* See Columns 10-18 of Table II.

NOTE.—Names of causes of deaths printed in italics on this page and in Table IV. should be avoided when possible in Medical Certificates.

STATE OF INFECTIOUS DISEASE.

RETURNS of the number of cases of Infectious Diseases notified under the "Infectious Diseases (Notification) Act, 1889," and the "Tuberculosis Prevention (Ireland) Act, 1903," as set forth in the following Table, have been kindly furnished by:—

Sir Charles Cameron, C.B., M.D., Medical Superintendent Officer of Health for the City of Dublin: Mr. Fawcett, Executive Sanitary Officer for Rathmines and Rathgar Urban District; Mr. Manly, Executive Sanitary Officer for Pembroke Urban District; Mr. Heron, Executive Sanitary Officer for Blackrock Urban District; by Dr. R.A. O'Donovan, Medical Superintendent Officer of Health for Kingstown Urban District; and by Dr. Bailie, Medical Superintendent Officer of Health for the City of Belfast.

TABLE I.—Showing the NUMBER of CASES of INFECTIOUS DISEASES notified in the Dublin Registration Area (viz.:—the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown), and in the City of Belfast during the week ended 9th October, 1909, and each of the preceding three weeks. A dash (—) denotes that the disease in question is not notifiable in the District.

(a) From 1st October, 1909.

CASES OF INFECTIOUS DISEASES UNDER TREATMENT IN DUBLIN HOSPITALS.

Table XII. exhibits the number of cases of certain infectious diseases treated in the Dublin Hospitals during the week ended 9th October, 1909.

From this it appears that:—

One case of measles was discharged from hospital during the week, and 4 cases remained under treatment at its close.

Twelve cases of scarlet fever were admitted to hospital, 6 were discharged, and 83* cases remained under treatment at the close of the week.

Three cases of typhus were admitted to hospital during the week, and 7 cases remained under treatment at its close.

Seven cases of diphtheria were admitted to hospital, 7 were discharged, there was one death, and 35 patients remained under treatment at the close of the week.

Six cases of enteric fever were admitted to hospital during the week, 6 were discharged, and 55 cases remained under treatment in hospital at the close of the week.

In addition to the above-named diseases, 12 cases of pneumonia were admitted to hospital, 8 were discharged, there were 2 deaths, and 19 cases remained under treatment at the end of the week.

ENGLAND AND SCOTLAND.

The mortality last week in 76 large English towns, including London (in which the rate was 12·2) was equal to an average annual death-rate of 12·9 per 1,000 persons living; the average rate for 8 principal towns of Scotland was 12·0 per 1,000, the rate for Glasgow being 12·7 and for Edinburgh 11·2.

INFECTIOUS DISEASE IN EDINBURGH.

The Registrar-General has been favoured by A. Maxwell Williamson, M.D., B.Sc., Medical Officer of Health for Edinburgh, with a copy of his Return of Infectious Diseases notified during the week ended 9th October. From this Report it appears that of a total of 91 cases notified, 57 were scarlet fever, 15 diphtheria, 11 phthisis, 5 erysipelas, one enteric fever, one puerperal fever, and one cerebro-spinal fever. Among the 435 cases of infectious diseases in hospital at the close of the week were 255 cases of scarlet fever, 55 of measles, 45 of diphtheria, 36 of phthisis, 14 of whooping-cough, 10 of erysipelas, 8 of enteric fever, 3 of cerebro-spinal fever, and one of puerperal fever.

* See note (*) at foot of Table XII.

TABLE II.—BIRTHS and DEATHS registered during the Week ending Saturday, 9th October, 1903, in the DUBLIN REGISTRATION AREA and in each of the under-mentioned 21 URBAN DISTRICTS (exclusive of Deaths in Public Institutions or Persons admitted from other Districts), with the number of Deaths from some of the PRINCIPAL CAUSES, and the Number of Uncertified Deaths; also the **TEMPERATURE** and **Rainfall** for the week, and for each of the **Weeks** immediately preceding.
